SELECTED BOOKS FOR PREPARATORY SCHOOLS

PUBLISHED AT THE

University Tutorial Press.

Mathematics and Science.

ALGEBRA, JUNIOR. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 3s. 6d. With Answers, 4s.
"Maintains the high standard of excellence we are accustomed to expect from so well known a source."—*Journal of the Assistant Masters' Association*.

ALGEBRA, JUNIOR, TEST QUESTIONS IN. By F. ROSENBERG, M.A., B.Sc. 1s. 6d. With Answers, 1s. 9d.
"A complete series of examples carefully graded."—*Educator*.

ARITHMETIC, THE PRIMARY. Edited by Wm. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. Third Edition. Part I, 1s. Part II, 1s. 6d. Part III, 1s. 6d.

An Introductory Course of Simple Arithmetical Exercises covering all the subjects usually taught in schools, from the four simple rules to stocks and shares.

ARITHMETIC, PRELIMINARY. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 2s. 6d. With Answers, 3s.
"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.

ARITHMETIC, THE JUNIOR. By R. H. CHOPE, B.A. Third Edition. 4s. With Answers, 4s. 6d.
"The book is well got up, and has a quite good selection of examples throughout."—*Mathematical Gazette*.

ARITHMETIC, JUNIOR, TEST QUESTIONS IN. Edited by A. G. CRACKNELL, M.A., B.Sc. 1s. 9d. With Answers, 2s.
"No better supplement to the ordinary class-book could be desired."—*Secondary School Journal*.

BOOK-KEEPING, JUNIOR. By T. C. JACKSON, B.A., LL.B. 3s.
"Students commencing Book-keeping will find this manual well fitted to enable them to gain an early grasp of the subject."—*Schoolmaster*.

BOTANY, JUNIOR. By FRANCIS CAVERS, D.Sc. 4s.
"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.

CHEMISTRY, PRELIMINARY. By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 2s. 3d.
"It is an excellent little book, and will make a clear understandable foundation for a systematic treatment of chemistry in the higher forms."—*Scottish Educational Journal*.

CHEMISTRY, JUNIOR. By R. H. ADIE, M.A., B.Sc. Second Edition. 4s.

"The results of fifteen years' experience of a thoughtful teacher are always valuable. A thoroughly sound course of practical instruction."—*Nature*.

CHEMISTRY, JUNIOR PRACTICAL. By H. W. BAUSOR, M.A. 1s. 9d.
"An excellent guide for the beginner in practical laboratory work."—*Educational Times*.

GEOMETRY, PRELIMINARY. By F. ROSENBERG, M.A., B.Sc. With or without Answers. 3s.

"Will prove distinctly helpful to the beginner in the study of Geometry."—*Bookseller*.

GEOMETRY, JUNIOR. By A. G. CRACKNELL, M.A., B.Sc. 4s.
"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.

HEAT, JUNIOR. By JOHN SATTERLY, D.Sc., M.A. 3s.
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal*.

MAGNETISM AND ELECTRICITY, JUNIOR. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 4s.
"This book should not have any difficulty in holding its own, for it is one of the best regarded from the standpoint of exact thinking."—*Electrical Engineering*.

SCIENCE, PRELIMINARY COURSE OF EXPERIMENTAL. By W. M. HOOTON, M.A., M.Sc. 3s.

A detailed course of Science Training for beginners in accordance with modern ideas.

SCIENCE, JUNIOR EXPERIMENTAL (Physics and Chemistry). By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. Second Edition. 4s.

"The explanations are clear, and we can recommend the work heartily."—*Secondary Education*.

SOUND AND LIGHT, JUNIOR. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 4s.
"Reaches a high standard, with plenty of practical work and exercises."—*Guardian*.

Languages, History, and Geography.

ENGLISH COURSE, PRELIMINARY (Grammar and Composition). By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough High School. 2s. 3d.

"An English Grammar embodying in general the recommendations of the Joint Committee on Grammatical Terminology. The author has kept in view the real aim of grammar, namely, the production of good English."—*Athenaeum*.

ENGLISH COMPOSITION, JUNIOR. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 3s.

"This excellent manual makes plain for the young pupil the essentials of good writing. A distinctly workmanlike production that can be heartily recommended as one of the best of its kind."—*Education*.

ENGLISH GRAMMAR, JUNIOR. With Parsing and Analysis. By A. M. WALMSLEY, M.A. Second Edition. 3s.

"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association*.

SPELLING AND PUNCTUATION (with Passages for Dictation). By HARRY SHOOSMITH, M.A., Modern Language Master, Wandsworth Technical Institute Secondary School. Second Edition. 1s. 3d.

"An excellent little book outside and in."—*Literary World*.

"Very seldom have we seen any book which deals so thoroughly with the difficult subject of teaching and learning to spell."—*Scottish Educational Journal*.

FRENCH COURSE, PRELIMINARY. By H. J. CHAYTOR, M.A., and H. E. TRUELOVE, B.A. Second Edition. 2s. 6d.

"An excellent first-year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method, and also to the necessity for thoroughness in the accidence of the language."—*Athenaeum*.

FRENCH COURSE, NEW JUNIOR. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 4s.

"The book becomes a serious rival to those existing."—*Schoolmaster*.

FRENCH READER, NEW JUNIOR. By J. P. R. MARICHAL, LL. ES L., and L. J. GARDINER, M.A. 3s.

"Consists of well-chosen literary extracts in French."—*Education*.

GEOGRAPHY, PRELIMINARY. By E. G. HODGKISON, B.A. F.R.G.S. Third Edition. 2s.

"An admirable text-book, clear, direct."—*Literary World*.

GEOGRAPHY, JUNIOR. Including Outlines of Physical Geography. By G. C. FRY, M.Sc. Third Edition. 4s.

"The matter is well arranged, the maps and diagrams are good, and the questions at the end of each chapter render the book a thoroughly practical aid."—*Schoolmaster*.

GEOGRAPHY OF ENGLAND AND WALES, A PRELIMINARY. By ERNEST YOUNG, B.Sc., F.R.G.S., late Head Master, County School, Harrow. 1s. 9d.

"A capital book, written in simple language, and containing abundant sketch maps of the right kind."—*London Teacher*.

HISTORY OF ENGLAND, PRELIMINARY. By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, B.A. With numerous Illustrations. 4s.

"In addition to an outline of political events it tries to give some idea of social and constitutional development, and also to connect history with geography. It is clearly written and well illustrated."—*School World*.

HISTORY OF ENGLAND, SCHOOL. By M. E. CARTER, Honour School of Modern History, Oxford. 6s.

Also in three parts as follows: I, to 1603; II, 1485-1714; III, 1660-1910. 2s. 6d. each.

"Very careful judgment has been exercised in the selection of the matter, and a proper perspective maintained."—*Educational Times*.

LATIN COURSE, NEW JUNIOR. By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 5s.

"A very successful compromise between the old and the new methods—a combination of what is best in both."—*Journal of the Assistant Masters' Association*.

SHAKESPEARE, THE JUNIOR. "As You Like It," "Macbeth," "Merchant of Venice," "Much Ado About Nothing," "Tempest." Each 2s.

"These are admirable texts for junior pupils. The notes are helpful without being distracting, and the introduction contains much useful matter."—*Secondary School Journal*.

Complete Educational Catalogue, and separate Catalogues of Class Books for Preparatory Schools, and the Oxford and Cambridge Local Examinations, post free on application.

THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

No. 638.

SEPTEMBER 1, 1922.

NORMAL

THE COLLEGE FOR CORRESPONDENCE TUITION.

FOUNDED 1889.

The
Normal
Way
to
Success.

IMPORTANT TO YOU.

We concentrate on Correspondence work, and on Correspondence work alone. We do not teach you in spare time left over from taking oral classes.

Our tuition is individual and adapted to the particular needs and powers of each pupil. You are not ground through a standardized mill at a standardized rate. If you are advanced, we waste no time on the elementary; if you are backward, we do not force you to keep pace with the crowd.

Time is precious; travelling expenses are higher than ever and travelling itself is wearisome, and may impair your capacity for work. Study in comfort then, as so many others are doing, at your own convenience, under expert guidance and amid the comforts of your fireside.

REVIEWS AND MINOR NOTICES.

SOCIAL PHENOMENA.

The Individual and the Community. By R. E. ROPER. (8s. 6d. net. Allen & Unwin.)

This book would have pleased the giant Moulineau. It certainly begins at the beginning, going back to the microscopic elements that show the "Brownian Movement." Life is all a matter of vibrations, and man's threefold function is to receive, harmonize, and generate them. Our whole social life is here resolved into the inter-actions and interferences of vibrations. Sometimes the author goes on to express certain social reactions "in terms of vibrations," and the result is picturesque if not very enlightening. The metaphor turns out to be more of an expository device than any substantive contribution to the explanation of social phenomena.

Certainly no one can accuse Mr. Roper of lack of clearness. He is nothing if not accurate in his use of terms. The second of the six parts into which the book is divided is taken up entirely with definitions. It demonstrates first of all the need for definition: then it defines; finally it explains the definitions by a chapter of interesting notes on them. Some of the definitions are highly controversial, and beg many questions: but the reader is never left for a moment in doubt about what the writer means. For example, the definition of *human being* quietly assumes the quality represented by the word *eternal*: but reasons are given for the assumption, and the reader is left to judge for himself whether the explanation is satisfactory. Naturally the key definition is that of *community* itself: "the association of two or more human beings for common (though not of necessity identical or similar) purpose or advantage in their evolution." This conception is later worked up into what is called a Formula of Co-existence: "Let A and B be two individuals (or groups) composing a community; A and B then co-exist for the purpose of similar or identical or different advantage. Should this purpose cease to be served by their co-existence, the community A B is at an end." Admitting that this formula may be regarded as dangerous or destructive, Mr. Roper proceeds to defend it and illustrate its application. It soon becomes evident to the reader that in the A and B groups used in the text A comes to stand for the possessing class and B for the proletariat, and it is not difficult to see towards which side our author leans. Teachers will be surprised to learn that "authority is a transgression of a law of life." Mr. Norman MacMunn will rub his hands as he reads: "It is unfair that the rules of a school should be held to bind a child unless and until the child understands and accepts them; it is monstrous that the regulations of an industrial school or a prison should be held binding upon those sent there by force." One would be inclined merely to smile and pass on, were it not that the author tells us that he has been a member of a school community for twenty-five years. We cannot but treat his arguments with respect, though they do not convince us. Intelligent and open-minded teachers will do well to see what Mr. Roper has to say for his views.

CURRENT ITALIAN THOUGHT.

Æsthetic as Science of Expression and General Linguistic Translated from the Italian of Benedetto Croce by D. AINSLIE. Second Edition. (21s. net. Macmillan.)

It is now thirteen years since Mr. Ainslie sent forth the first English edition of Croce's great work on *Æsthetic*, and thus appeared as a pioneer in introducing to English readers some of the best of current Italian thought. The position has happily changed since then, and if the name of Croce is not exactly a household word among us, the general drift of his speculations has, we should suppose, become fairly common property among well-read people.

Croce's "*Æsthetic*" falls into two parts, theoretical and

historical, the two forming independent but complementary books. The main difference between the second and the first English edition is that Mr. Ainslie now completes the translation of the historical portion, which he was obliged to summarize in the first edition.

Some of our readers, we hope many, are sure to have made acquaintance in a general way with Croce's "philosophy of the spirit" by means of Mr. Clutton Brock's excellent little book entitled "The Ultimate Belief." For Croce the activities of the spirit are divisible first into the theoretic and the practical. The theoretic is again divisible into the intellectual or logical and the intuitive or æsthetic; and the practical into the economic or useful and the moral. From the present point of view the distinction between logical and intuitive knowledge is the important thing, and it is in Croce's insistence upon the independence of intuitive knowledge, and in his thorough-going application of that principle to the doctrine of Æsthetic, that his indisputable claim to originality mainly lies. Intuitive knowledge is obtained through imagination, and is knowledge of individual things. Logical knowledge is obtained through the intellect, and is knowledge of the relations between things. But further, every true intuition is also expression. It is impossible to distinguish them. Intuitive knowledge is expressive knowledge, and is the æsthetic or artistic fact.

We are not sure that we have done wisely in trying to put Croce's fundamental position in so few words, for in order to grasp and apply his principle much patient thought is inevitably necessary. But the philosophically minded teacher who will take the trouble will find himself amply rewarded, if only by Croce's illuminating discussions of problems that have a definite educational bearing. He points out, for example, the impossibility of translations, in so far as they pretend to effect the remoulding of one expression into another. "Faithful ugliness or faithless beauty" is, he says, the fate of the translator. Translation is only relatively possible—not as the reproduction of the original expressions, but as the production of similar expressions. A "good translation," such as the English Bible, is really an approximation which has original value as a work of art, and can stand by itself. We may take as another example Croce's remarks on the essential nature of History. History is included in the concept of Art; it does not construct universals and abstractions, but posits intuitions. To object that this robs History of its dignity and value is to misconceive Art, which is an essential theoretic function, not an amusement or a frivolity. The world of what has happened, of the concrete, is intuition—historical intuition if shown as it realistically is, artistic intuition in the narrower sense if presented in the aspect of the possible, the imaginable. The attempt to discover a philosophy of history, an ideal history, a sociology, an historical psychology (so variously called) the object of which is to extract from history concepts and universal laws, is the error of historical intellectualism. If we get any laws from history they are not laws of history at all, but laws of ethics, of logic, or of science, as the case may be.

Did space permit, one might go on to show how Croce turns the intense light of his ruling principle upon the theme of "art for art's sake," upon the question of teaching rhetoric in schools, and upon many other matters of high educational import. Well may Mr. Ainslie say that the importance and value of Italian thought have been too long neglected in Great Britain.

ALEXANDRIAN LITERATURE.

Herodas: The Mimes and Fragments. With Notes by Dr. W. HEADLAM. Edited by A. D. KNOX. (63s. net. Cambridge University Press.)

The schoolmaster who can afford to buy this book probably does not exist; but every sixth form master can see that it is acquired for his school classical library, and we strongly recommend all such to do so, for it is

likely to take its place along with Munro's "Lucretius" and Jebb's "Sophocles" as one of the outstanding monuments of English scholarship. Much of Herodas is, of course, no fare for schoolboys, but the classical master will want to read Herodas, and he has here an authentic text—very much more easy to read than that first published by Sir Frederic Kenyon in 1891!—from which he can give his class at least one example of the mime.

The volume as it stands is really the joint work of the late Dr. Headlam and of Mr. A. D. Knox, Fellow of King's College, Cambridge, though the latter modestly describes his own work as merely editorial. But the preface informs us that "a small minority of the notes up to Mime VII, several of the notes on Mime VII, and a large majority of the subsequent notes have been written by the present editor, together with text, translation, critical notes and indexes." The introduction (of some sixty pages) is in two parts; the first and longer part, by Dr. Headlam, gives us a very interesting and able survey of literary tendencies after the fall of Athens, without understanding which we cannot appreciate Alexandrian literature, and then a full literary criticism of Herodas' style and of his characters as regular types of his age; the second and shorter part, by the present editor, is palæological and gives us some idea of the meticulous care and great patience of those scholars to whose devotion we are indebted for our classical texts. The papyrus of Herodas in the British Museum is defective in several places, but Mr. Knox has succeeded in reconstructing a fairly complete text for the first eight mimes. The patient labour involved in such a reconstruction cannot be realized by the fortunate reader who skims through the text so reconstructed, but he gets glimpses of it when he reads in the notes of correspondence with Sir Frederic Kenyon, that a careful inspection of the papyrus makes him (Sir Frederic) think that such and such a *lacuna* contained three rather than four letters(!), or when he reads in the *apparatus criticus* on Mime II 6, "There is a line on the right hand margin probably unintentional (to clean the pen?)."

In addition to the reconstructed text, with translation *en face*, the volume contains most exhaustive notes—so necessary in such an allusive writer as Herodas—which not only elucidate the point at issue but provide abundant references for further research—and concludes with four invaluable indexes of words, notes, subject-matter, grammar, metre, style, textual criticism, &c.

RESEARCH AND RELIGIOUS FAITH.

A Faith that Enquires. By Sir HENRY JONES. (18s. net. Macmillan.)

This posthumous volume may be regarded as Sir Henry Jones's last will and testament. The spirit that animates it is expressed with admirable felicity in the Preface. The author says:—

"I have had one main purpose before me throughout this course of lectures. It is that of awakening and fostering the spirit of research in questions of religious faith.

"If I read our times aright, there are many thousands of thoughtful men in this country whose interest in religion is sincere, but who can neither accept the ordinary teaching of the Church, nor subject themselves to its dogmatic ways. I would fain demonstrate to these men, both by example and by precept, that the enquiry which makes the fullest use of the severe intellectual methods, supports those beliefs upon which a religion that is worth having rests. Let man seek God by way of pure reason, and he will find Him.

"As to the Churches, I could wish them no better fate than that henceforth they shall regard the articles of their creeds, not as authoritative dogmas, but as objects of unsparing intellectual enquiry. Enquiry not only establishes the truth of the main elements of the doctrines which the Churches inculcate, it transmutes and enriches their meaning. Enquiry is the way of Evolution; His

'Kingdom will come' *pari passu* with the development of the more secular forces on which the well-being of mankind depends."

The book contains twenty lectures, dealing with such important themes, among others, as the following: "The Sceptical Objections to Enquiry in Religion Stated and Examined," "The Nature of Religion," "The Contrast of the Finite and Infinite," "Religious Life and Religious Theory," "Morality and Religion," "The World of the Individualist," "The World of the Idealist," "The Standard of Value," "The Absolute and the Natural World," "God and Man's Freedom," "The Immortality of the Soul." The book touches on and discusses many live questions in philosophy and religion. It is modern in the best sense, and whatever view we may take of the author's conclusions, the volume should be read by all who are interested in the relations between philosophic thought and religion.

BIOGRAPHY.

Shackleton: A Memory. By HAROLD BEGBIE.
(2s. 6d. net. Mills & Boon.)

This vigorous and attractive sketch of the great Antarctic explorer should be placed in the library of every boys' school. It is an inspiration to high adventure and strenuous endeavour.

ENGLISH

Studies in Literature: Second Series. By SIR ARTHUR QUILLER-COUCH. (14s. net. Cambridge University Press.)

All who love literature—be they teachers, students, or general readers—will welcome the publication of this second series of "Studies." There is much that is new, or rather, much that is presented in a new and attractive light in these Studies. The charm of the author's language, his humour, and his gentle—occasionally forcible—irony make his work delightful to read. The first lecture, on Byron, is a timely appreciation of one who, even now, is neglected by his own countrymen, though honoured abroad; Don Juan is considered the highest expression of his genius. In the lectures on Shelley the author points out that much of the hostile criticism which has been directed against his poetry was due to his unconventional life. His lyrical qualities are well explained and illustrated. The spiritual basis of his teaching—a revolt, in fact, against oppression and dogmatism—is perhaps better understood now when the conditions of life are not unlike those of the poet's own day. The lectures on Milton lead up to an appreciation of "Paradise Lost." Among many interesting features are included a comparison of the lives of Milton and Ruskin, loneliness being the keynote of both; an account of the development of the poet's style and the influence of music on it; and the reasons why "Paradise Lost," originally planned as a drama, became an epic. There follow lectures on "Antony and Cleopatra," in which we are shown Shakespeare's revelation of the wonderfully complex character of Cleopatra; on Chaucer and his successors, the English poets Gower, Lydgate, and the rest, and his far greater Scottish disciples, James I, Henryson, Dunbar, and Douglas. Finally there is a very able defence of the much discussed and often derided Victorian Age, in which the author begs us not to dwell upon the events of one or two particular years, or upon the little foibles or pieces of affectation or prudery which are merely on the surface, but rather to consider the great movements and the wonderful progress in civilization during that period.

English Intonation, with Systematic Exercises. By H. E. PALMER.
(5s. net. Hefter.)

The object of this book is stated to be to record the "tones and tone-compounds" of southern English speech, to classify these, and hence to formulate a series of rules, and to set forth a system of tonetic notation. The author rightly insists that pronunciation and intonation are closely bound up together. Many foreigners who are well acquainted with the words and constructions of English and who pronounce it correctly, are nevertheless at once stamped as foreigners when they speak. This is due to incorrect stressing of words and syllables, or perhaps we should rather say, to incorrect intonation. The ingenious system of notation offered by Mr. Palmer, which is quite new to us, is very fully and skilfully illustrated by examples and should be most useful in instructing foreigners in English speech, and in a modified form will probably be of service in teaching young English boys and girls to improve their speech.

An Old English Grammar. By Dr. E. E. WARDALE.
(7s. Methuen.)

Dr. Wardale's book is intended as an introduction to the standard works of Sievers and Wright. It is the work of a scholar, who shows that the theories and laws of Old English are thoroughly in accordance with the most modern thought and research. Many of us have memories—perhaps not the most pleasant—of our early struggles with Sievers; and what is wanted is undoubtedly a more elementary book written in a simple and—be it candidly admitted—a more palatable style. While there is much that is attractive and interesting in the way in which the matter is presented in this book, it seems, as an introduction to the subject, rather too difficult and involved. It is a pity that the author did not break through tradition and give first place in his book to a simple accidence without too many notes.

The Tragic Muse. Vols. I and II. *The Spoils of Poynton.*
By HENRY JAMES. (7s. 6d. each. Macmillan.)

These are Pocket Volumes XII, XIII, and XV of the new and complete edition, in thirty-five volumes, of the novels and stories of Henry James. They are agreeable books to handle and are beautifully printed on very thin paper. What adds materially to the charm of this edition is the retention, from the "New York" edition, for which they were written, of the author's critical prefaces, in which he condescended to set forth in not extremely lucid language but with leisurely precision and whimsicality and complete candour the origin of the story and the reasons for his particular method of dealing with it. "The Tragic Muse," of which he cannot clearly recall the germ, he introduces as "a poor fatherless and motherless, a sort of unregistered and unacknowledged birth." It overstayed its welcome as a serial in *The Atlantic Monthly*, "running on, inordinately, several months beyond its proper twelve." Alas, "The Spoils of Poynton," too, issued in instalments, was eyed from month to month "with an editorial ruefulness excellently well founded."

Edward Carpenter: The Man and his Message. By TOM SWAN.
(5s. net. Cape.)

This book, first published in 1910, and now appearing in a new and revised edition, provides a well-informed, well-written, and sympathetic account of Carpenter's teaching. Under the headings "The Man and his Books," "His Philosophy," "His Message to the Individual," and "His Message to Society," the writer gives a clear and interesting exposition of his theme, supported by judiciously chosen passages from Carpenter's writings. The test of success in the writing of a book of this kind is that it should stimulate the reader to turn to the original, and to this test we believe Mr. Swan's little treatise will answer well. We have little doubt that many have turned, and that many more will turn, to Carpenter's refreshing pages, as the result of having read this introduction.

EDUCATION.

The Johns Hopkins University Studies in Education, No. 4.
Edited by E. F. BUCHNER. *The Effect of the Physical Make-up of a Book upon Children's Selection.* By FLORENCE E. BAMBERGER. (2 dollars. The Johns Hopkins Press, Baltimore.)

Any one experienced in the management of a children's library, and for that matter any one who has had opportunities of observing children's ways, knows that the outward form of a book, its effect on the eye, has much to do with arousing or depressing the child's interest in it. Of course a bright cover and a good supply of pictures are not in themselves enough to make a poor book popular, but a dull exterior and the absence of pictures are enough to make a good book unpopular. Starting from this general position, which suggested a subject for careful inquiry, Miss Bamberger has carried out an elaborate investigation into the effect of the physical make-up of a book upon children's selection. The effects upon selection of the size of the book, the attractiveness of the cover, the number and quality of pictures, the number of lines in a page, the choice of title, and so on, are dealt with exhaustively, and the results are summarized at the end. It is no less instructive than interesting to find that a title which suggests a text-book, e.g. a title containing the word "Reader," has a devastating effect upon a child's desire to read or to possess the book. Indeed the external make-up of a book seems on the whole to exert a negative rather than a positive appeal. At first sight it may appear that Miss Bamberger has spent an enormous amount of pains upon a subject that scarcely more justifies such expenditure. But when we consider the importance of the reading habit, and the trifles that effect the formation of a habit, we see that this view cannot be sustained.

Principia Ethica. By G. E. MOORE.
(15s. net. Cambridge University Press.)

Published first in 1903, this book rapidly became a standard text on the subject, and "is now reprinted without any alteration whatever, except that a few misprints and grammatical mistakes have been corrected." The author explains that he is still in agreement with the main tendency and conclusions, and that if he began correcting what seems to him to need correction he could not end without re-writing the book. In some cases we might not unreasonably ask, "Why not, then, re-write the book?" But in the case of an accepted text like this great confusion would result from the existence of two versions, and since a great deal of the value of such works is the material they supply for controversial exercise among young philosophers, it is certainly better to leave the text undisturbed.

GEOGRAPHY.

Philip's Visual Contour Atlas. Staffordshire Edition. Edited by G. PHILIP. (1s. 6d. net. Philip.)

This atlas, suitable for junior forms, contains forty coloured plates. On all the orographical maps, the contour lines are drawn with great clearness thus giving a sharp definition to the coloured areas. In this edition there are four maps specially designed for the use of schools in Staffordshire.

A Regional Geography of the Six Continents. Book VI, South America. By E. W. HEATON. (1s. 4d. net. Russell.)

In this elementary geography a fairly detailed account is given of the chief regions of South America and a final chapter is devoted to the West Indies, Central America, and Mexico. The text, bound in limp cloth, is illustrated with eight pictures and thirty-two maps and diagrams.

The World about Us: A Study in Geographical Environment. By O. J. R. HOWARTH. (2s. 6d. net. Milford: Oxford University Press.)

This little book of ninety pages provides a good introduction to a more detailed study of geographical environment. In the various chapters, environment is discussed in relation to distribution, migration, transport, political states, and history. All the descriptions are written in an interesting style and they are particularly suitable for boys in the middle forms of secondary schools.

Handbook of Commercial Geography. New Edition. By G. G. CHISHOLM. (25s. net. Longmans, Green.)

This well-known book, first published in 1889 and now in its ninth edition, has long been recognized as a standard work on Commercial Geography. The preparations for this edition, although begun in 1913, were delayed by the war and the work now appears in a thoroughly revised form. Much new matter has been introduced, especially under the headings of climate, industrial towns, coal, and the British Isles, and several new maps are also added. In the Appendix are numerous statistical tables in which, as a rule, pre-war figures are given. This handbook is indispensable to teachers who want reliable information for their lessons, to students in higher schools and colleges that are devoting increased attention to commercial education, and to those entering on commercial life who take a sufficiently intelligent interest in their business to make their private studies bear on their daily pursuits. Although the price is somewhat high, the book is well worth the money and at least one copy should be in every school library for constant reference.

HISTORY.

Medieval France: A Companion to French Studies. By A. TILLEY. (25s. net. Cambridge University Press.)

The volume under notice is framed on the model of the famous Cambridge Modern History and its numerous successors. That is to say, it contains a series of allied but disconnected studies from the pens of a group of experts. In this case, however, the scope of the central theme is restricted to Medieval France, the number of studies is limited to ten, and the group of experts is small, viz. seven Frenchmen and three English. Their joint labours result in a marvellously complete and authoritative account of the making of the French monarchy from Hugh Capet to Charles VIII, together with a description of the social, religious, artistic, and literary development evident during the same five centuries. Some of the sketches begin at an earlier date than 987, and some at a later—there is a curious lack of uniformity in the matter—but the strength of the volume as a whole resides in its treatment of the second half of the medieval millennium. The political history of the period is dealt with in a masterly manner by M. Langlois. Then follow chapters on Army, Navy, Industry and Commerce, Learning, Language,

Literature, Architecture, and Art generally (except Music, which is entirely omitted). Altogether this work will be an invaluable companion to all who are studying either the language or the history of France.

MATHEMATICS.

Plane Geometry for Schools. By T. A. BECKETT and F. E. ROBINSON. Part I. (5s. Rivingtons.)

In this book, of which only Part I is before us, the authors have adopted the now usual plan of beginning with a section devoted to practical work. This is followed by three sections of formal geometry which cover the ground of the first four books of Euclid, together with some elementary trigonometry. The arrangement of the subject matter is good, though we think it would have been better to relegate some of the propositions in the Appendix to the section dealing with the circle to Part II. The examples are well graduated and furnish abundant exercises of all stages of difficulty.

Bell's Mathematical Series for Schools and Colleges.—*Practical Mathematics.* By A. DAKIN. Part I. (5s. Bell.)

This is a course of instruction in arithmetic, elementary algebra, geometry, and numerical trigonometry. As in the majority of books of this type, the fundamental principles are stated without formal proof as facts to be committed to memory, more or less plausible evidence being adduced as grounds for their acceptance. A satisfactory feature is the attempt to make the graphical work a more intellectual exercise than it usually is, by employing the graphs for purposes of comparison and correlation.

Applied Calculus: An Introductory Text-book. By F. F. P. BISACRE. (10s. 6d. net. Blackie.)

This book is interesting, it makes good reading, the chapters are headed by apt quotations, there are portraits and biographies of eminent mathematicians, physicists, and chemists, but by the time we reach the end of it we are in doubt as to what was the author's main object in writing it. Presumably it was to teach the calculus, but more than a hundred of the 400 pages are devoted to problems in electricity and magnetism, chemical dynamics, and thermo-dynamics. We cannot see what advantage results from mixing subjects in this way. The physics and chemistry are learned much better from special text-books, and all the real calculus contained in these later chapters could be compressed into four or five pages. There is good matter in the book, but the irrelevancies dilute it too much.

MISCELLANEOUS.

Strained Relations. By CYRIL ALINGTON. (6s. net. Macmillan.)

The author of this delightful tale is the Head Master of Eton, and it is pleasant to note the fact. If Mr. Alington were to give up his high scholastic office, a new force might, perhaps, be added to our novel-writers—so deft and true is the touch in this "Strained Relations"; but he will continue at Eton for long years yet, we hope, and this novel, and others, its successors, will serve to show how vivacity and overflowing humour can be found in the most responsible of positions. Perhaps it is the English way; perhaps it is the typical English scholar's way. But there is in Mr. Alington's style of writing and management of his characters a peculiar zest of life, a delight in wit for wit's sake, which go well beyond any ordinary academic limits. The tale is a slight one, but every turn of it is complete. A lively young baronet desires the honour of a visit to his country-house of a fair American; the lady's mother, a devout spiritualist, is attracted by the prospect held out to her of meeting on this visit Professor Lapski, a thought-reader: and Lapski does not exist! Lapski must be impersonated therefore. But the sedate hostess-to-be cannot come at the last minute. She, too, must be impersonated. And Uncle Robert, the brewer, another guest—he must not be a brewer, for the spiritualistic lady is also a Prohibitionist. So another change of identity takes place; and yet others, too. Amid such vital uncertainties, and helped along by whimsical quotations, this house-party goes through its amusing existence. "Nothing like a little judicious levity," quotes Mr. Alington in his preface, and we are glad to have been judicious with him.

The Story of the First Life Guards. By Capt. C. W. BELL. (1s. 6d. Harrap.)

A soldierly history—terse, clear, animated—of this famous regiment. The Life Guards were formed, with the Grenadiers and Horse Guards, at the Restoration, and consisted of the King's Troop—largely Charles II's followers in his exile—the Duke of York's Troop of Horse from Dunkirk, and Monk's Life Guard.

The regiment was divided into First and Second Life Guards in 1788. At first each guardsman provided his own horse and weapons, and in the eighteenth century the "private gentleman" had to pay admittance money of some £100, and the price of a cornet's commission was £1,200. The regiment fought in William III's campaigns but not in Marlborough's, at Dettingen and Fontenoy, but not in the Seven Years' War, went to the Peninsula in 1812, was retained at home from 1816 to 1882, and has played, as everybody knows, a gallant part in all our recent wars.

British Museum. A Guide to the Antiquities of Roman Britain in the Department of British and Medieval Antiquities. A Guide to the Fourth, Fifth, and Sixth Egyptian Rooms and the Coptic Room. A Series of Collections of Small Egyptian Antiquities which illustrate the Manners and Customs, the Arts and Crafts, the Religion and Literature, and the Funeral Rites and Ceremonies of the Ancient Egyptians and their Descendants, the Copts, from about 4500 B.C. to A.D. 1000. (2s. 6d. Printed by Order of the Trustees.)

These excellent publications are not intended for school use, but they will be extremely useful to any schoolmaster who wishes from time to time to vary his regular teaching by an address on the Romans in Britain or the life and customs of the Egyptians. Their very modest price brings them within the reach of all.

The Highbrows : A Modern Novel. By C. E. M. JOAD. (6s. net. Cape.)

Mr. Joad, in his Foreword, estimates his work with a dispassionate acuteness—"a sufficiently near approximation to the modern novel to be mistaken for one"—that prepares us for the cleverness and clearness of the book itself. Readers of modern literature will be familiar with a certain class of novel on which "The Highbrows" is, as it is intended to be, something of a satire. This purpose in it certainly prevents the book from being a novel in the ordinary sense, but perhaps it adds to the zest with which the author portrays his characters. Types that have challenged us at various stages of our academic life—the Boys' Club enthusiast, the would-be hedonist, the social reformer taking himself and his pleasures so seriously—suffer an amusing re-assessment in these pages. Particularly good is the scene in which easy-going old Mr. Pramp shows that he can talk as much philosophy as, and more common-sense than, most of the Highbrows.

MODERN LANGUAGE.

French Dictation : A Handbook for Teachers, with Sentences and Passages for Practice. By W. RIPMAN. (3s. 6d. net. Dent.)

Mr. Ripman has written a useful little book of hints and suggestions for teachers who make a practice of giving French dictation. He points out what are the commonest mistakes, in what region of the pupil's mind they originate, and how the learner may be assisted to guard against them. A large number of test sentences are given, and the left-hand pages are left blank for the teacher to add others. At the end of the book are a large number of passages for dictation.

French Verse : From Villon to Verlaine. By Prof. R. L. GRÆME RITCHIE and J. M. MOORE. (5s. Dent.)

This volume, say the authors in their Preface, is not an anthology but a collection of the most characteristic pieces of the greater French poets. Twenty-nine poets are represented in the 149 pieces. A few words of biography and criticism are prefixed to the works of each poet, and also a word or two of explanation of each poem. This last feature is novel, and we are not sure that it has very great value. Students who can read French verse can surely be left to discover the point of a poem for themselves. The compilers stick pretty close to the beaten track, but as a brief survey of French poetry their volume has value. The remarkable history of that poetry is curiously illustrated by the fact that 36 pages are given to the poets from Villon to Malherbe, 34 to those from Saint-Amant to Béranger, and 135 to the remainder.

Heath's Modern Language Series.—Vie et Œuvres de J.-J. Rousseau. Avec des Notes Explicatives. Par Prof. A. SCHINZ. (7s. 6d. net. Heath, New York.)

The work under notice forms a very useful popular introduction to Rousseau. Prof. Schinz's method is to narrate the author's life—in the earlier part of the book by means of extracts from the "Confessions"—pausing at each point when a book was written to describe that book and give long extracts from it. The result is a very good picture of the man and his writings. The work is not a critical one, as is frankly stated in the Preface. The notes, however, are scholarly, and students may find them

of value. One gets a good bird's-eye view of Rousseau, and we rose from the perusal of the volume with the feeling that the "Profession de Foi du Vicaire Savoyard" was the soundest thing that Rousseau wrote, and the "Contrat-Social" the most original.

PHILOSOPHY.

The Theory of Mind as Pure Act. By Prof. GIOVANNI GENTILE. Translated from the Third Edition, with an Introduction, by Prof. H. WILDON CARR. (15s. net. Macmillan.)

Gentile and Benedetto Croce are the recognized leaders of Italian idealism, a school of thought which goes back, through Vico, to the Sicilian learning of the great Frederick's days, but in its present stage is to be regarded as a development of Hegelianism. It is interesting to note that, like Croce, Gentile is an educationist as well as a philosopher, and has fought to rescue Italy from the *pedagogia scientifica* which takes its inspiration largely from the positivism of Ardigò. The present work is a brilliant summary of the main arguments of the school, and should for that reason be warmly welcomed in its English dress. Reality, according to Gentile, is not (as Hegel held) thought *thought*, but thought *thinking*: that is, it is an eternal activity of the universal, transcendental Ego, carried on through the medium of individual minds. From that position follow the doctrines about human experience and action, freedom, immortality, art, science and history, with which students of Croce are familiar—though Gentile expounds them with independent authority. Prof. Carr, whose luminous book on Croce is well known, has preserved in his translation much of the literary beauty of the original and has added a very helpful introduction.

All is One : a Plea for the Higher Pantheism.

By EDMOND HOLMES. (5s. net. Cobden-Sanderson.)

Like most men who have a message for their time, Mr. Holmes refrains from "spreading himself" over a vast number of topics. He prefers to concentrate with all his strength upon the few main truths which he believes he sees, and which he believes most other people do not see. Readers of "The Cosmic Commonwealth" may not find much that is new in the present volume; but they will find something, and, what is more, they will find a new emphasis placed upon certain parts of Mr. Holmes's philosophic teaching. After two chapters of preliminary explanation, we get seven chapters in which the great guests of the spirit of man are described—the guests of ideal truth, of ideal beauty, of ideal order, of ideal good, of ideal reality (God), of the ideal self, and (drawing all things together and making them one) of love. The writer seeks to show that the ultimate object of each of these guests is the living Whole, the All which is One; and this is his "plea for the higher pantheism." Incidentally he shows that the gods of Christendom and of Islam, gods who exist above and beyond man and Nature, fall short of this conception. The Christ ideal, "the good genius of Christianity," if only it could be freed from "the jealous, vindictive, partisan god of the Old Testament," would mean loyalty to "the pan-cosmic self," and would be the way of salvation for the mass of mankind. There is a good deal in the book with which one would like to join issue. Mr. Holmes's references to the conception of deity in the Old Testament appear, for instance, to miss the patent fact of development within the Old Testament itself. All the same, we have to thank Mr. Holmes for his continued insistence upon larger and nobler ideals than those provided by popular religion.

Philosophical Studies. By DR. G. E. MOORE. (15s. net. Kegan Paul.)

We are not sure that the same considerations apply here as in the case of the author's "Principia Ethica." The present book cannot be regarded as a philosophical text, made up as it is of ten more or less disparate papers, eight of which have already been printed in various philosophical magazines. The author feels that "some apology is needed for republishing them exactly as they stood." For he acknowledges that "some of the views expressed in the earlier ones are views with which I no longer agree." His excuse is that "the mistaken views in question are so embedded in the form and substance of the papers in which they occur, that it would have been impossible to correct them without practically substituting new papers for old ones; and that in spite of these mistakes the old papers, as they stand, still seem to me, on the whole, to say things which are worth saying in a form which, however defective it may be, I doubt my own ability to improve upon." He expresses special doubt about the propriety of reprinting unchanged the first essay, that on "The Refutation of Idealism." We certainly share his doubt. The friends who have advised him that it is useful to have the original text "for reference" surely forget that the pages of *Mind* for 1903 are still

available, and that a fresh statement of his views on this important subject cannot be held to be an exorbitant demand, after a lapse of nineteen years. Essays stand on quite a different level from a fixed text like the "Principia." They can scarcely be regarded as classics that it would be profane to change. The alterations made on the essay on "External and Internal Relations" are all to the good, and the same sort of thing might with advantage have been done elsewhere. The two hitherto unpublished essays—"The Conception of Intrinsic Value" and "The Nature of Moral Philosophy"—are very acceptable. Every philosopher of the high calibre and keen discrimination of Dr. Moore should be called upon every five years at least to produce a paper of the type of the latter of these essays, a paper addressed to people of high intelligence but with no training in technical philosophy. Our author stands this test extremely well, and those who admire his acumen and subtlety in the more technical contributions will be gratified to find that he is equally strong on the side of non-technical exposition. A preliminary essay viewing the whole field from this standpoint would add considerably to the attraction of the volume.

POETRY.

Poems of To-day: Second Series. (3s. 6d. net, Cloth. 2s. net, Paper. Sidgwick & Jackson.)

We are grateful to the English Association for publishing a second series of "Poems of To-day." Many think that this age, with its upheaval of civilization and rapid growth of new ideas, resembles the Elizabethan in producing poetry which will live. Certainly we have here a glorious outburst of song, most of which has been written in the last decade, some actually on the battle-field; other poems are of remembered impressions of the war, and many of homely scenes which the violence of the war throws into greater relief. Trivial objects, small beauties of life, favourite scenes, were made more precious by the constant nearness of death.

There is a long list of authors here, seventy-two in number, fifty of whom were not represented in the first series. The versification varies from conventional rhythms to the unconventional, irregular lines which bring out so strongly the author's meaning. Thomas Hardy is represented by four well-known poems: "Friends Beyond," "Men who march away," "The Darkling Thrush," and "The Oxen." One of the longest poems is Maurice Baring's "In Memoriam, A. H.," which ranks with the great elegies of literature. Many are full of delightful, quaint fancies of childhood; Francis Thompson's "Ex Ore Infantium" is charming. We are glad to see that Prof. A. E. Housman's tiny "Epitaph on an Army of Mercenaries" is preserved, and that Ralph Hodgson's "Bells of Heaven," a little plea for ill-treated animals, finds a place here.

PSYCHOLOGY.

Suggestion and Mental Analysis: An Outline of the Theory and Practice of Mind Cure. By Dr. W. BROWN. (3s. 6d. net. University of London Press.)

This book falls comfortably into three parts: the first treats of Psycho-Analysis, in dealing with which the author wisely distinguishes between the psychology and the method; the second treats of Hypnosis, Suggestion, and Coué; the third concerns itself with the philosophical background as illustrated in the system of Bergson. The author is quite at home in the first two parts: in the third he is less happy. He is emphatically right in believing that Bergson's philosophy has a real connexion with the new psychology of the unconscious, but in the space available in this little book it is impossible to do justice to the big questions involved in the philosophical background. In the first part Dr. Brown is really remarkably successful in his brief exposition. Of the space at his disposal he has made admirable use. It is in the middle part, however, that he is at his best. His treatment of Hypnosis is individual and helpful. He ventures to differ from a great many of his fellow investigators, but has excellent arguments to sustain his various theses. The plain, wholesome man will rejoice in the assurance given that susceptibility to hypnotization is at its lowest in the normal healthy man. The treatment of Coué is just what it should be: full of respect for a man of remarkable gifts, and yet severely critical of his methods. A helpful conception is supplied by Dr. Brown's *autognosis*, a term he has invented to signify self-understanding. The more a man knows about his own spiritual processes the more likely he is to lead a spiritually sane life. Many of us have an insistent fear of the results of introspection and self-analysis, so we are glad to have Dr. Brown's assurance that real self-knowledge acts in quite a wholesome way. In fact, only the wholesome mind is capable of real autognosis. A striking feature of the book is the prominence

given to the idea of *curing* patients. So many books on this subject appear to take a delight in symptoms and causes to the exclusion of remedies, that one rejoices in a book like this where the recovery of the patient is put in the forefront.

The Intelligence of High School Seniors as Revealed by a State-Wide Mental Survey of Indiana High Schools. By Prof. W. F. BOOK. (11s. net. Macmillan.)

The name of Prof. Book is already known for his work in educational psychology, and his latest publication should enhance his reputation. It is based upon a "mental survey" of the senior pupils in the high schools of the State of Indiana. The tests of intelligence are not described in detail; for these the reader is referred to sources which experts only will need to investigate. Still, most readers will be satisfied to follow up the results of the inquiry, which include such interesting points as that the ablest pupils are not located by the high school, that the high school is not truly democratic, and that the high school is better adapted to the interests and needs of girls than to those of boys. Here is food for thought so far as America is concerned, and we should say at a guess that similar results would be found in our own secondary schools. It is fairly certain that we have not reached the point at which those who do best at school do best in later life: in other words, school occupations as at present devised are not a trustworthy test of intelligence.

SCIENCE.

Workshop Practice and Processes: Pattern-Making. By W. R. NEEDHAM. (2s. 6d. net. Blackie.)

This little book contains an excellent description of the materials and tools used in pattern-making. The author has also succeeded in giving clear and excellent explanations of the principles involved. Pattern-making cannot stand by itself—a knowledge of moulding is also necessary, and this has not been lost sight of. The book can be recommended strongly.

First Principles of Jig and Tool Design. By FRANK LORD. (3s. 6d. net. Blackie.)

The importance of jig and tool design has increased very greatly during recent years, and no engineering student can afford to remain in ignorance of the methods employed. The book before us will be found to be a very good introduction to the subject and cannot fail to be of service to all young engineers.

Cassell's Library of Applied Science.—*Chemistry.* By G. THOMPSON and G. H. LESLIE. Part I. (2s. net. Cassell.)

This book is written to show the important part which chemistry plays in everyday life and industry. The uses in industrial chemistry of the simple laboratory processes, such as solution, filtration, and crystallization, are described, and the necessary modifications explained and illustrated. In a section on combustion, methods of steam raising, lighting and acetylene welding of metals are discussed, and such interesting subjects as the fixation of nitrogen, the commercial preparation of hydrogen for balloons and airships, are included. The book is written in an interesting way, and there are many illustrations, but in some cases the value of these is depreciated by insufficient explanation in the text. Many of the illustrations are photographs of the actual plant. Some corrections might be made in a later edition. Boyle was not a contemporary of Marlborough; it is very unlikely that ozone exists in air, either seaside or country; iron oxide and nitric oxide are insoluble in water, and on page 85, 1st line, "coal" should be "carbon." (Sir William Crookes spoke of the "Wheat Problem" to the British Association, not to the Royal Society). The book should be really useful for inclusion in a school library or for use as a reading book for boys or girls studying chemistry.

A Text-book of Geology. By Prof. A. W. GRABAU. In Two Volumes. Part I, General Geology; Part II, Historical Geology. (64s. net. Harrap.)

In view of the currency of the larger works of A. Geikie, Chamberlin and Salisbury, and E. Haug, with their abundant references to modern geological research, it may be asked if there was room for another text-book of the scope of that planned by Prof. Grabau. Yet we are grateful to a teacher of such experience for entering freshly on the field. At the outset he remarks that writers on geology have almost invariably treated of sedimentary rocks before the description of the igneous masses from which they have generally been derived. Though in our practical teaching we have long found it convenient to follow the rational order, yet a reference to our

(Continued on page 614.)

RECENT PUBLICATIONS

English for the English. *A Chapter on National Education.* By GEORGE SAMPSON, Hon. M.A. Cambridge, St John's College. **Third impression.** Crown 8vo. 5s net.

"This is one of the most stimulating and persuasive books on education that we have ever read. It is no less clear-headed than warm-hearted, and it will do much to support the faith and brighten the vision of those who know how deplorable is the failure of the elementary school system to raise the human value of its protégés."—*The Pall Mall and Globe*.

Society and Solitude. By E. T. CAMPAGNAC, Professor of Education in the University of Liverpool. Crown 8vo. 8s 6d net.

"Study of a book of this type, noble in its conceptions and practical in its outlook, should do much to educate public opinion in the world of education."—*The Times Educational Supplement*.

History of Switzerland, 1499-1914.

By WILHELM OECHSLI, late Professor of Swiss History at the University of Zurich. Translated from the German by EDEN and CEDAR PAUL. Demy 8vo. With 3 maps. 20s net. Cambridge Historical Series.

"We cordially welcome this new volume in the Cambridge Historical Series, which will supply a want that has long been felt. . . . It is written throughout with a fullness of knowledge. . . . A book which every student will find sound and useful."—*The Times Literary Supplement*.

History of Holland. By GEORGE EDMUNDSON,

D.Litt., F.R.G.S., F.R.Hist.S. With 2 maps. Demy 8vo. 22s 6d. Cambridge Historical Series.

"Had we been asked at any time in recent years to name the leading authority on Dutch history in this country, the answer would certainly have been the name of the author of this work."—*The Times Literary Supplement*.

The Provinces of Ireland. General Editor,

GEORGE FLETCHER, F.G.S., M.R.I.A., of the Department of Agriculture and Technical Instruction for Ireland. Now ready:—**Leinster**, 7s 6d net, **Connaught**, 6s 6d net. With maps, diagrams, and illustrations. Crown 8vo. Previously published, **Ulster** and **Munster**, 6s 6d net each. Prospectus on application.

"Should become the pocket companion of every traveller in Ireland." *The Times Literary Supplement*.

Cambridge Geographical Text-books:

Senior. By G. F. BOSWORTH, F.R.G.S. With 71 illustrations and 29 maps and diagrams. Crown 8vo. 7s 6d. Previously published:—**Junior.** By A. R. CHARTLEIGH, M.Sc. 5s. **Intermediate.** By A. J. DICKS, B.A., B.Sc. Third edition. 6s.

"Clearly written, containing a vast amount of information, simply paraphrased, and beautifully illustrated, it represents the high watermark of such work."—*Education*, on Junior Text-Book.

Rocks and their Origins. By G. A. J. COLE, F.R.S. **Second Edition.** With 20 illustrations. Royal 16mo. 4s net. Cambridge Manuals of Science and Literature.

Supplement to Notes on Qualitative Analysis.

Concise and Explanatory. By H. J. H. FENTON, Sc.D., F.R.S., F.I.C., F.C.S., University Lecturer in Chemistry, Cambridge. Crown 4to. 3s 6d net.

The author gives in this Supplement a concise list of the reactions of the rarer elements, selecting those elements which can be identified by chemical tests alone, and has included in addition an account of the reactions and properties of a considerable number of organic and inorganic compounds not already described in the earlier part of the book.

The Student's Handbook to the University and Colleges of Cambridge. *Twenty-first Edition,* 1922-23. Revised to June 30, 1922. Crown 8vo. 7s 6d net.

The more important additions to this issue of the Handbook are: (1) The New Regulations for the Anthropological Tripos; (2) The New Regulations for the Law Tripos; (3) The New Regulations for the Modern and Medieval Languages Tripos; (4) The Regulations for the Diploma in Education.

Age and Area. *A Study in Geographical Distribution and Origin of Species.* By J. C. WILLIS, M.A., Sc.D.,

Hon. Sc.D. (Harvard), F.R.S. With chapters by HUGO DE VRIES, F.M.R.S.; H. B. GUPPY, M.B., F.R.S.; Mrs E. M. REID, B.Sc., F.L.S.; JAMES SMALL, D.Sc., F.L.S. Demy 8vo. With illustrations. 14s net.

"Some thirty years ago (says the Author in his Preface) a pupil of the strictest school of natural selection, and enthusiastic in my belief in its principles, I set out upon a course of independent observation of Nature. Ten years of such work convinced me that a simpler explanation of phenomena was always to be found. . . . Age as an explanation of spread is enormously simpler than natural selection."

Cambridge Plain Texts: French. Edited,

with biographical notes on the authors, by H. F. STEWART and A. A. TILLEY. Three additional volumes now ready, 1s 3d each.

Victor Hugo: *Eviradnus, Ratbert, La Légende des Siècles.*

Molière: *L'Amour Médecin, Le Sicilien.*

Michelet: *Saint-Louis.*

Cambridge Readings in French Literature. Edited by ARTHUR TILLEY. Crown 8vo. With

24 plates. 8s net.

"This is another most attractive book, containing selections from good French prose and poetry of all periods and reproductions of French pictures. The guiding idea is 'to illustrate the history of France by a record of some of her famous sons.' . . . Mr Tilley's book should have an instant and durable success."—*The Spectator*.

Cambridge Plain Texts: Spanish.

Edited by E. ALLISON-PEERS. Two volumes now ready, 1s 6d each.

Espronceda: *El Estudiante de Salamanca.*

Lope de Vega: *El Mejor Alcalde, El Rey.*

Cambridge Readings in Spanish Literature. Edited by J. FITZMAURICE-KELLY.

Crown 8vo. With 8 plates. 10s net.

The New Shakespeare. Edited by Sir ARTHUR

QUILLER-COUCH and JOHN DOVER WILSON. The fifth volume, **The Comedy of Errors**, is now ready. Cloth, 6s net. Leather, 10s 6d net.

"The edition is a real contribution to scholarship. It is a voyage in the spirit of the Elizabethans over seas not yet clearly charted; and solid land is in sight on the horizon—a new settlement of the text of Shakespeare." *The Times Literary Supplement*.

Sound: *an elementary text-book for schools and colleges.*

By J. W. CAPSTICK, M.A. **Second edition**, with an additional chapter on the application of Acoustical Principles to Military Purposes. With 122 text-figures. Crown 8vo. 7s 6d. Cambridge Physical Series.

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

numerous text-books shows that in writing we have behaved quite differently; and here Prof. Grabau undoubtedly sets us right. He points out that every geologist should study the elements of mineralogy; but to some extent he stultifies this advice by attempting an introduction to the subject in the limits of a few pages. He does well, however, in introducing useful drawings of modern invertebrates to illustrate the features of rocks of organic origin, and again in his historical volume as an introduction to types of animal life. Prof. Grabau's treatment of current problems, such as coral reefs and marine platforms, and of modern discoveries, such as Walcott's Cambrian work, would be made clearer by references to original publications. But British geologists will find special interest in the photographic reproductions from skeletons and paintings of fossil vertebrates in the American Museum of Natural History. These include the hunting Tyrannosaurus, and the terrible reconstruction of Allosaurus preying on a Brontosaurus backbone. On page 906 of Part II the title of a figure does not agree with the drawing, which includes a large amount of hypothetical restoration of the Pithecanthropus skull. We have noticed very few slips—the familiar "tachylite" (Part I, p. 107); the oft-repeated fiction about *roches moutonnées* (p. 314); and the plural "osars" (p. 507), which belongs to no known language.

Inorganic Chemistry. By E. I. LEWIS, B.A., B.Sc. 10s net. Or in two parts, 3s 6d net each.

Heat and Light. By Sir R. T. GLAZEBROOK, M.A., F.R.S. 10s. Separately: *Heat*, 5s; *Light*, 6s.

Mechanics and Hydrostatics. By Sir R. T. GLAZEBROOK, F.R.S. 9s. Also in separate volumes: *Dynamics*, 4s 6d; *Statics*, 4s; *Hydrostatics*, 3s.

Electricity and Magnetism. By Sir R. T. GLAZEBROOK, F.R.S. 10s.

A School Electricity. By C. J. L. WAGSTAFF, M.A. 7s 6d.

Elementary Dynamics for Schools. By C. E. ASHFORD, M.A. 6s 6d.

Mechanics and Hydrostatics for Beginners. By S. L. LONEY, M.A. 5s.

The Elements of Statics and Dynamics. By the same author. 10s. Separately: *Statics*, 5s 6d; *Dynamics*, 5s. *Solutions*, 9s.

The Elements of Hydrostatics. By the same author. 5s 6d. *Solutions*, 6s.

Treatise on Elementary Dynamics. By the same author. 8s. *Solutions*, 8s 6d.

Elementary Algebra. By C. GODFREY, M.V.O., M.A., and A. W. SIDDON, M.A.

	With Answers	Without Answers
Complete in one volume ..	8s	7s 6d
Or in two volumes—		
Vol I, Algebra for Beginners	4s 6d	4s
Vol II	5s	4s 6d
Vol I is also published in two parts—		
Part I, Chapters I—IV ..	1s 9d	1s 9d
Part II, Chapters V—XIV	2s 9d	2s 9d

Algebra for Secondary Schools. By CHARLES DAVISON, Sc.D. 10s. Or in two volumes, I, 6s 6d; II, 5s; without answers, 4s 6d each.

Higher Algebra for Colleges and Secondary Schools. By the same author, 8s 6d.

An Algebra for Preparatory Schools. By T. DENNIS, M.A. 3s 3d. Teachers' edition, 7s 6d.

A School Algebra Course. By F. GORSE, M.A. With or without answers, 5s. Or in three parts: Part I, 2s 3d; Parts II and III, 2s each.

The Elements of Trigonometry. By S. L. LONEY, M.A. 4s 6d.

Plane Trigonometry. By the same author. 10s. Or in separate parts: Part I, *An Elementary Course, excluding the use of imaginary quantities*, 6s. Part II, *Analytical Trigonometry*, 5s.

An Elementary Treatise on Plane Trigonometry. By E. W. HOBSON, F.R.S., and G. M. JESSOP, M.A. 7s 6d.

Plane Trigonometry for Secondary Schools. By C. DAVISON, Sc.D. 6s 6d.

A Class Book on Trigonometry. By C. DAVISON. 4s 6d.

Trigonometry for Beginners. By J. W. MERCER, M.A. 6s.

Numerical Trigonometry. By the same author. 3s 6d.

An Introduction to the Study of Numerical Trigonometry. By E. A. PRICE, B.A. 3s 6d.

A First Course of Geometry. By C. DAVISON, Sc.D. 2s 3d.

Plane Geometry for Secondary Schools. By CHARLES DAVISON, Sc.D., and C. H. RICHARDS, M.A. 8s. Or in four parts, paper boards. Part I, 2s 9d; Parts II—IV, 2s each.

The Elements of Solid Geometry. By CHARLES DAVISON, Sc.D. 4s.

Elementary Geometry (Practical and Theoretical). By C. GODFREY, M.V.O., M.A., and A. W. SIDDON, M.A. Complete in one volume. 7s. Or in two parts: Part I, *Experimental Geometry*, 2s; Part II, *Theoretical Geometry*, 5s 6d. Part II is also published in four separate books: Book I, *Area*, 2s each; Book III (*The Circle*), Book IV (*Similarity*), 2s 6d each. Also published in two volumes: I, 4s; II, 3s 6d. Vol I contains Part I (*Experimental Geometry*) and Part II, Books I and II; Vol II contains Part II, Books III and IV. *Answers to the Examples*, 9d.

A Shorter Geometry. By the same authors. 4s 6d. Or in four parts: Part I and Part III, 1s 9d each; Part II, 2s; Part IV, 1s 9d. *Notes and Answers*, 1s 6d.

Modern Geometry. By the same authors. 6s.

Solid Geometry. By the same authors. 2s 3d.

A Geometry for Schools. By F. W. SANDERSON, M.A., and G. W. BREWSTER, M.A. With or without answers, 4s 3d. *Examples from the above*. With or without answers, 2s 9d.

Geometrical Drawing. With Notes and Examples. By W. H. BLYTHE, M.A. In two parts. 2s 6d each.

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

From EDWARD ARNOLD & CO'S List.

ENGLISH.

- Arnold's Literary Reading Books.** Illustrated. 2s. 6d. each.
- | | |
|-------------------------|---------------------|

- Piers the Plowman.** Translated into Modern Prose. By K. M. WARREN. 2s. 6d.
- Baines's Short History of English Literature.** 6s.
- Laureata and the Poet's Realm.** Two famous collections of Poetry for Schools. 2s. 6d. each Vol.
- The Britannia Poetry Book.** 1s. 8d.
- A Junior Book of Poetry.** 1s. 4d.
- Mount Helicon.** A new anthology of verse. 2s. 6d.
- English Narrative Poems.** 2s. 6d.
- English Ballads and Short Narrative Poems.** 2s. 6d.
- A First Course of English Literature.** By Dr. R. WILSON. 1s. 9d.
- Modern Essays.** Reprinted from *The Times*. 2s. 6d.

COMPOSITION, &c.

- Arnold's Junior English Composition.** 2s.
- Kenny's Composition from English Models.** Book I, 1s. 6d. Book II, 2s. 6d.
- Kenny's Exercises in Composition, I-III.** 5d. each.
- Exercises for Parsing in Colour.** By EDITH HASTINGS. Complete, 2s. 6d. Three Parts (each containing the colour chart), 8d. each.
- Arnold's Junior English Grammar.** 2s.
- A First Course in English Grammar and Analysis.** By Dr. R. WILSON. 1s. 9d.
- Essay Writing.** By G. KENDALL, M.A. 2s. 6d.
- First Précis Book.** By G. A. F. CHATWIN. 3s. 6d.
- Précis Writing and Reproduction.** By W. J. GRIFFITH, M.A. 3s. 6d.
- Grammatical English.** By F. W. G. FOAT, D.Lit., M.A. 4s. 6d.
- Lingua Materna.** By Dr. R. WILSON. 3s. 6d.

HISTORY.

- Junior History of England.** By Prof. Sir CHARLES OMAN, M.P., and M. OMAN. 3s. 6d. Revised and including the Great War.
- Arnold's Florin English History.** By C. E. M. HAWKESWORTH, M.A. 2s.
- Oman's History of England.** Complete to the end of the Great War. 7s. 6d. Part I (to 1603), 4s. Part II, 4s. 6d. Division I (to 1307), 2s. 6d. II (1307-1688), 3s. III (from 1688), 3s. 6d.
- Social and Industrial History of England.** By Dr. F. W. TICKNER. Complete, 8s. 6d. Parts I-III, 3s. 6d. each.

HISTORY—continued.

- Scenes from European History.** By G. B. SMITH. 3s.
- Outlines of European History, 1789-1914.** By G. B. SMITH. 3s. 6d.
- Outlines of British History.** By G. B. SMITH. Complete, 6s. Part I, to 1603; Part II, 1603-1914. 3s. 6d. each.
- The Last Century in Europe, 1814-1910.** By C. E. M. HAWKESWORTH. 7s. 6d.
- A General History of the World.** By OSCAR BROWNING, M.A. I—Ancient, 3s. 6d. II—Medieval, 3s. 6d. III—Modern, 3s. 6d. Complete in One Vol. 8s. 6d.
- The Ancient World.** By C. DU PONTET, M.A. 6s.
- The World in Arms, 1914-1918.** By S. CUNNINGTON. 2s. 6d.
- The Days of Alkibiades.** By C. E. ROBINSON, M.A. 6s.
- Builders of History.** 6 Vols. 1s. 8d. each.
- Jerusalem under the High Priests.** By E. R. BEVAN, M.A. 8s. 6d. net.
- Lessons in Old Testament History.** By the Ven. A. S. AGLEN. 5s. 6d.
- Seven Roman Statesmen.** By Prof. Sir C. OMAN, M.P. 6s.
- Friends of the Olden Time.** By A. GARDNER. 2s. 6d.
- Men of Might.** By A. C. BENSON and H. F. W. TATHAM. 6s. net.
- Elementary Civics.** By C. H. BLAKISTON. 2s. 6d.

GEOGRAPHY.

- Arnold's Junior Geography.** 2s.
- Arnold's New Geography.** 2s.
- A Class-Book of Geography.** By A. W. ANDREWS. 7s. 6d.
- Arnold's Modern Geographies.** I—England and Wales; II—The British Isles. III—Europe. IV—Asia. 9d. each; cloth, 1s.
- Outlines of Physiography.** By Prof. A. J. HERBERTSON. 4s. 6d.
- Practical Atlas of the British Isles.** 10d. net.
- Arnold's Home and Abroad Atlas.** 8d. net.

FRENCH.

- First Lessons in French.** By M. BAGULEY. 2s. 6d.
- French à la Française.** By Lady BELL and Mrs. TREVELYAN. Book I, 1s.; II, 1s. 2d.; III, 1s. 4d.
- French without Tears.** By Lady BELL. Book I, 1s.; II, 1s. 2d.; III, 1s. 4d.
- Arnold's Modern French Course.** By H. L. HUTTON, M.A. Book I, 3s. Book II, 3s. 6d.
- Arnold's Lectures Françaises.** Illustrated. Book I, 2s.; Books II-IV, 2s. 6d. each.
- Petite Grammaire Française.** By E. RENAULT. 2s. 6d.
- Grammaire Française.** By E. RENAULT. 5s.
- Exercices in French Grammar.** By E. RENAULT. 2s.
- Junior French Reader.** By E. RENAULT. 2s.
- French Composition.** By J. S. HOME CAMERON. 3s.
- Le Française chez lui.** By W. H. HODGES and P. POWELL. 1s. 6d.
- Les Français en Guerre.** By JETTA S. WOLFF. 2s.
- Les Français d'Aujourd'hui.** By JETTA S. WOLFF. 2s.
- Les Français en Ménage.** By J. S. WOLFF. 2s.
- Les Français en Voyage.** By JETTA S. WOLFF. 2s.
- Les Aventures de Maître Renard.** By M. CEPPI. 1s. 3d.
- Renard le Fripon.** By M. CEPPI. 1s. 3d.

GERMAN and SPANISH.

- First German Prose Composition.** By Dr. F. W. WILSON. 2s.
- Second German Prose Composition.** By Dr. F. W. WILSON. 2s. 6d.
- Free Composition in German.** By Dr. F. W. WILSON. 1s. 6d.
- A First German Reader.** By Prof. D. L. SAVORY. 2s.
- A First Spanish Book.** By H. J. CHAYTOR. 3s. 6d.
- A First Spanish Course.** By E. A. WOOLF. 5s.

LATIN.

- Arnold's New Latin Course.** Part I, 2s. 6d.; Part II, 3s. 6d.
- Gardiner's First Latin Course.** 3s.
- Easy Latin Prose.** By W. H. SPRAGGE. 2s.
- Compendium Latinum.** By W. F. WITTON. 3s. 6d.

London: EDWARD ARNOLD & Co., 41 & 43 Maddox Street, W. 1.

From EDWARD ARNOLD & CO'S List.

LATIN—continued.

- Latin Prose Composition.** By W. R. HARDIE. 5s.
Gardiner's Latin Translation Primer. 2s.
Gardiner's Second Latin Reader. 2s. 6d.
Mirabilia. By B. D. OLIVE. Modern Stories in Latin. 2s.
Livy, Book XXVI. By R. M. HENRY. 3s. 6d.
Simplified Caesar. By W. F. WITTON. 2s.
Simplified Ovid. By W. F. WITTON. 2s.
Dies Romani. By W. F. WITTON. Easy Extracts. 2s.
Selections from Ovid's Heroides. By LEWIS and BROADBENT. 2s. 6d.
Selections from Ovid's Metamorphoses. By H. A. JACKSON. 2s.
The Fables of Oriblius. By A. D. GODLEY. Part I, 1s.; Part II, 1s. 3d.

MATHEMATICS.

- The Inductive Arithmetic.** By E. SANKEY.
 Pupils' Books, I-III, 4d. each; IV, V, VI, VII, 6d. each.
 Class Teachers' Books, with Answers, Notes on Method, and Oral Exercises. Books I and II, 1s. 6d. each; IV-VII, 2s. each.
Commercial Arithmetic. By E. SANKEY. Book I, 2s. Book II, 2s.
A School Arithmetic. By A. C. JONES, Ph.D., and P. H. WYKES, M.A. 5s. 6d. Parts I-III, 2s. 6d. each.
Arnold's Half-Crown Arithmetic. By J. P. KIRKMAN and J. T. LITTLE. 2s. 6d.
Exercises in Arithmetic. By C. M. TAYLOR. Parts I-III. 1s. 8d. each, without Answers; 2s. each, with Answers.
Easy Arithmetic and Accounts. By F. SANKEY and G. A. LORD. Books I and II, 1s. 6d. each.
Elementary Algebra. By C. O. TUCKEY, M.A., Assistant Master at Charterhouse. In Two Books. 3s. 6d. each. Complete, 6s. 6d.
Elementary Algebra. By W. D. EGGAR, M.A. 4s. 6d.
Geometry for Schools. By A. C. JONES. Part I, 2s.; Parts II and III, 2s. 6d. Complete, 6s. 6d.
A First Formal Geometry. By R. WYKE BAYLISS. 2s. 6d.
Elements of Geometry. By Dr. R. LACHLAN and W. C. FLETCHER, H.M.I. 3s. 6d.
Elementary Geometry. By W. C. FLETCHER, M.A. 2s.
Practical Trigonometry. By H. C. PLAYNE, M.A., and R. C. FAWDRY, M.A. 3s.

PHYSICS and CHEMISTRY.

- Heat.** By W. J. R. CALVERT, Harrow School. 6s.
A Text-book of Physics. By Dr. R. S. WILLOWS. 9s. net.
The Elements of Natural Science. Part I. By Rev. W. BERNARD SMITH, B.Sc., Marlborough College. 5s.
Mechanics. By W. D. EGGAR, M.A. 4s.
Electricity and Magnetism. By C. E. ASHFORD. 4s. 6d.
Magnetism and Electricity. By E. W. KEMPSON. 3s. 6d.
Inorganic Chemistry. By E. J. HOLMYARD, Clifton College. 6s. 6d.
Inorganic Chemistry for Schools. By W. M. HOOTON, M.A. 5s.
Elements of Inorganic Chemistry. By W. H. SHENSTONE, F.R.S. 6s. 6d.
Outlines of Inorganic Chemistry. By Dr. E. B. LUDLAM. 5s.

PHYSIOLOGY and PEDAGOGY.

- Elementary Physiology for Teachers.** By Dr. W. B. DRUMMOND. 3s. 6d.
A Manual of Physiology. By L. HILL, F.R.S. 6s.
Physiology for Beginners. By L. HILL, F.R.S. 2s. 6d.
Psychology for Teachers. By Prof. LLOYD MORGAN, F.R.S. 5s.
The Dawn of Mind. By M. DRUMMOND. 3s. 6d. net.
Five Years Old or Thereabouts. By M. DRUMMOND. 5s. net.
Experimental Pedagogy. By Dr. É. CLAPARÈDE. 5s. net.
Introduction to Child-Study. By Dr. W. B. DRUMMOND. 6s. net.

THE MODERN EDUCATOR'S LIBRARY.

GENERAL EDITOR: Prof. A. A. COCK.

- Education: Its Data and First Principles.** By Prof. T. PERCY NUNN, D.Sc. 6s. net.
The Teaching of Modern Foreign Languages. By Prof. H. G. ATKINS and H. L. HUTTON, M.A. 6s. net.
Moral and Religious Education. By SOPHIE BRYANT, D.Sc., Litt.D. 6s. net.
The Organization and Curricula of Schools. By W. G. SLEIGHT, M.A., D.Lit.
Introduction to the Psychology of Education. By Dr. J. DREVER, M.A. 6s. net.

[Other Volumes in Preparation.]

ARNOLD'S SINGING-CLASS MUSIC.

A Series of entirely new Songs for Treble Voices, with Piano Accompaniment and Sol-fa, in addition to Staff Notation.

UNDER THE GENERAL EDITORSHIP OF

THOMAS F. DUNHILL, Professor at the Royal College of Music.

All the Songs have been specially composed for this series.

LATEST ADDITIONS.

UNISON SONGS.

The Associated Board holds Examinations of graduated difficulty throughout Great Britain and Ireland, and in the Colonies, in both Theoretical and Practical Music, and in Elocution in Great Britain and Ireland.

The Examinations are as follows:

Local Centre Examinations (Intermediate, Advanced, and Final Grades) conducted by two Examiners. Written Examinations are held in March and November at all Centres in Great Britain and Ireland. Practical Examinations are held in March-April at all Centres, and in the London district and certain Provincial Centres in November-December as well as in March-April.

Entries for the November-December Examinations close Wednesday, October 18, 1922.

Full particulars of all L.C. Examinations will be found in Syllabus A, which will be sent on application to the Secretary.

"School" Examinations (Higher, Lower, Elementary, and Primary Divisions) conducted by one Examiner. Candidates for these Examinations may be entered either by Heads of Schools or by individual Teachers. In the latter case, neither the Teacher nor the Candidate need necessarily be connected with a School.

The "School" Examinations are held throughout Great Britain and Ireland during three periods, viz. October-November, March-April, and June-July.

Syllabuses A and B, Ensemble and Elocution Syllabuses, for 1922 or for 1923, Entry Forms, Theory Papers set in previous years, and any further information can be obtained post free from the Secretary, 14 & 15 Bedford Square, London, W.C. 1.

Entries for the October-November Examinations close Wednesday, October 11, 1922.

Full particulars of all "School" Examinations will be found in Syllabus B, which will be sent on application to the Secretary.

Elocution Examinations will be held at certain fixed Centres; for particulars see special Elocution Syllabus.

The subjects for Examination are as follows:

GRAMMAR OF MUSIC.
RUDIMENTS OF MUSIC.
COUNTERPOINT.
HARMONY.
PIANOFORTE.
ORGAN.
VIOLIN.
VIOLA.

VIOLONCELLO.
DOUBLE BASS.
INSTRUMENTAL AND
VOCAL ENSEMBLES.
HARP.
WIND INSTRUMENTS.
SINGING.
ELOCUTION.

The Board offers annually **Six Exhibitions**, tenable for two or three years at The R.A.M. or The R.C.M. These Exhibitions are limited to Candidates who fulfil certain conditions set forth in Syllabuses A and B.

FIRST IDEAS OF GEOMETRY

By G. St. L. CARSON, M.A., M.Sc., and D. E. SMITH, Ph.D. Illustrated. 1s. 6d. net.

*Being the Introductory Chapter of the
"Plane Geometry" by the same Authors*

It is generally recognized that an introductory course based on definite principles, and working towards a well defined end, renders subsequent formal work in Geometry less difficult and more profitable. Such an introductory course, built from concrete illustrations, is offered in "**First Ideas of Geometry**"—a book which is identical with the Introductory Chapter in the Carson-Smith "**Plane Geometry**," and which hitherto has not been available in a separate cover.

Through the publication of the Carson-Smith "**Plane Geometry**" and "**Elements of Algebra**," Parts I, in smaller sections, as listed below, some teachers will find the books more convenient for use in their classes.

ELEMENTS OF ALGEBRA

Part I ..	340 pages	..	3s. 6d. net.
Section I	2s. net.
Section II	2s. 3d. net.
Part II ..	214 pages	..	3s. net.
Parts I and II ..	538 pages	..	5s. 6d. net.
Part III	<i>In Preparation.</i>

PLANE GEOMETRY

Part I ..	266 pages	..	3s. net.
Section I	First Ideas of Geometry	1s. 6d. net.	
Section II	The Substance of Euclid,		
	Books I and II ..	2s. 3d. net.	
Part II ..	216 pages	..	3s. net.
Complete ..	482 pages	..	5s. 6d. net.

A Prospectus of the Series will be forwarded on application.

FOR THE TEACHER

THE TEACHING OF ARITHMETIC

By D. E. SMITH, Ph.D., Professor of Mathematics in Teachers' College, Columbia University. 196 pages. Illustrated. 6s. net.

THE TEACHING OF GEOMETRY

By D. E. SMITH, Ph.D., Professor of Mathematics in Teachers' College, Columbia University. 339 pages. Illustrated. 7s. net.

TWO INFORMAL NUMBER BOOKS

NUMBER STORIES OF LONG AGO

By D. E. SMITH. 150 pages. With many Illustrations. 2s. 9d. net.

An account of the development of number from its earliest beginnings to the present day, delightfully written in the form of stories told to children.

WORK AND PLAY WITH NUMBERS

By G. WENTWORTH and D. E. SMITH. 144 pages. Illustrated. 2s. 9d. net.

A number primer in which nursery rhymes, coupled with attractive illustrations, are made the basis of the teaching.

Complete Catalogue sent on application.

LATIN, GREEK, FRENCH, HEBREW,
MATHEMATICS, LOGIC, PSYCHOLOGY, &c.

Address—THE SECRETARY,
Burlington Correspondence College,
14 Elsham Road, Kensington, W. 14.

Languages and Sciences Simplified.

The Simplified Home Studies in Languages, Economics, Psychology, and Logic, originated 16 years ago by the Rev. J. C. Wilcox, M.A. (St. John's College, Cambridge), have changed the acquisition of knowledge from an irksome task into a real pleasure.

By this System of teaching (a scientific adaptation of old and new methods) you can take up one or more subjects and study them at home in your own time. There is no time limit. No text-books are required: the S.S.S. tuition papers would become your own property. Your work would be under the direction of scholars who are expert in their own subjects and would take a personal interest in your progress. No previous knowledge of any subject is required. You can begin to study at once.

The subjects taught by the S.S.S. are:
French
Spanish
English
Latin
Logic
Psychology
Economics
Arabic
Hebrew
Greek
(N.T.)

A STUDENT WRITES:

"The method is splendid, evincing that rare gift of insight into a student's difficulties and weaknesses, and taking one so gradually through the work as to reduce labour to the minimum."

Thousands of unsolicited letters of appreciation can be seen at the offices of the S.S.S. on application to the Secretary.

Write at once for particulars, mentioning the subject or subjects in which you are specially interested. **FREE TEST LESSONS**, taken from the Course, will be sent by the Secretary.

SCHOOL OF SIMPLIFIED STUDY, Ltd.,
126 St. Paul's Chambers, 19-21 Ludgate Hill, LONDON, E.C. 4.

A LIST OF SCHOOLS

[Cost of insertion under this heading sent on application.]

are offered annually for
Competition.

Next Examination will be in June, 1922.

For Prospectus and other information apply to the HEAD MASTER.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."

The Journal of Education, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness :

"Two years ago you sent me a pupil named ——. Through her parents I have had **four** good pupils this year from four different places, and through two of these have **five** more coming this term: that is, ten pupils from paying **one** commission."

"Personally, I have found your firm to bring in 90 per cent. of the pupils who come to me through Scholastic Agents."

"Hearty thanks for your continued recommendations, which bear such excellent fruit in the number of boys that I get through you. I find that out of my 32 boarders 16, or exactly one half, have been sent here by you."

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

"Designed to supersede all other secondary treatises on the subject."—*Westminster Review*.

ARITHMETIC, THE JUNIOR. By R. H. CHOPE, B.A. Third Edition. 4s. With Answers, 4s. 6d.

"No better arithmetic for school work has come into our hands."—*Scottish Educational Journal*.

ARITHMETIC, THE SCHOOL (SENIOR LOCAL EDITION). By W. P. WORKMAN, M.A., B.Sc. 4s. 6d. With Answers, 5s.

Adapted from *The School Arithmetic* for the Oxford and Cambridge School Certificate Examinations.

"The book is of a very high order of merit, and provides a thorough course in Arithmetic."—*School World*.

ARITHMETIC, RURAL. By Dr. A. G. RUSTON. 5s.

"We believe the book will be found just what is required in schools of agriculture."—*Secondary Education*.

BOOK-KEEPING, PRACTICAL LESSONS IN. By T. C. JACKSON, B.A., LL.B. Fourth Edition. 5s.

"A well-arranged and well-explained treatise."—*Educational Times*.

GEOMETRY, JUNIOR. By A. G. CRACKNELL, M.A., B.Sc. 4s.

"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.

GEOMETRY SCHOOL, THE. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc., F.C.P. Second Edition. Enlarged. 6s.

"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World*.

SCHOOL GEOMETRY (MATRICULATION EDITION). By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. Second Edition. 5s.

Covers fully the syllabus for London University Matriculation.

GRAPHS, MATRICULATION. By C. H. FRENCH, M.A., and GEORGE OSBORN, M.A. Second Edition. 1s. 3d.

"The explanations are remarkably clear."—*Secondary Education*.

HYDROSTATICS, MATRICULATION. By Dr. WILLIAM BRIGGS and Professor G. H. BRYAN. Second Edition. 4s.

"An excellent text-book."—*The Journal of Education*.

MATHEMATICS FOR TECHNICAL STUDENTS, A FIRST Course in. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. Second Edition. 3s.

"The authors have succeeded in creating a 'workshop atmosphere' around this elementary course."—*Nature*.

MATHEMATICS FOR TECHNICAL STUDENTS, A SECOND Course in. By P. J. HALER, M.B.E., B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. 6s.

A course of work in Mathematics suitable for the second and third years' work on lines similar to the *First Course in Mathematics for Technical Students* by the same authors.

MECHANICS, JUNIOR. By F. ROSENBERG, M.A., B.Sc. 4s.

MECHANICS, MATRICULATION. By Dr. WILLIAM BRIGGS and Prof. G. H. BRYAN. Fourth Edition. 5s.

"A practical book for this subject. It will be found exceedingly useful."—*Educational News*.

TRIGONOMETRY, JUNIOR. By Wm. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. 4s.

"The examples given are numerous in each chapter, the diagrams and the arrangements practical."—*Secondary Education*.

BOTANY, CHEMISTRY, PHYSICS, &c.

BOTANY, JUNIOR. By FRANCIS CAVERS, D.Sc. 4s.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.

"Combines observational and experimental work with text-book instruction in a judicious fashion."—*Preparatory Schools Review*.

BOTANY, SENIOR. By FRANCIS CAVERS, D.Sc. Second Edition. 6s. 6d.

"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purposes underlie the manifold variations which plants assume."—*Nature*.

CHEMISTRY, JUNIOR. By R. H. ADIE, M.A., B.Sc. Second Edition. 4s.

"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine*.

CHEMISTRY, SENIOR. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. Second Edition. 6s. 6d.

"The ground is well covered on experimental lines. There are questions to every chapter, and a section on chemical calculations."—*Guardian*.

CHEMISTRY, SENIOR PRACTICAL. By H. W. BAUSOR, M.A. 4s. Including preparation, experiments on action of heat, quantitative and qualitative analysis.

CHEMICAL CALCULATIONS. By H. W. BAUSOR, M.A. 3s. ADVANCED COURSE. 1s. 9d.

"The calculations which are inseparable from chemistry from its very beginnings are dealt with concisely, yet at sufficient length to make them clear to a young student."—*Knowledge*.

HEAT, JUNIOR. By JOHN SATTERLY, D.Sc., M.A. 3s.

"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal*.

HEAT, SENIOR. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. Second Edition. 5s.

"The information is accurate and up to date."—*The Journal of Education*.

HYGIENE, FIRST STAGE. By R. A. LYSTER, M.D., B.Ch., B.Sc. Sixth Edition, Revised and enlarged. 4s.

"A continuous and well-developed course of instruction in Hygiene. The facts are always reliable, the illustrations serviceable."—*Schoolmaster*.

MAGNETISM AND ELECTRICITY, JUNIOR. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 4s.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

MAGNETISM AND ELECTRICITY, THE SCHOOL. By R. H. JUDE, D.Sc., M.A. 5s.

"From first to last there is an originality of treatment which makes it interesting reading."—*Nature*.

MECHANICS AND PHYSICS (MECHANICS, HYDROSTATICS, and Heat), An Introductory Course of. By W. M. HOOTON, M.A., M.Sc., F.I.C., and ALFRED MATHIAS. 2s. 6d.

"An excellent introduction to the fundamental principles of Mechanics, Hydrostatics, and Heat."—*Educational News*.

SCIENCE, JUNIOR EXPERIMENTAL (PHYSICS AND CHEMISTRY). By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. Second Edition. 4s.

"The explanations are clear, and we can recommend the work heartily."—*Secondary Education*.

SOUND AND LIGHT, SENIOR. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 6s.

"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary Physics."—*Nature*.

SOUND AND LIGHT, JUNIOR. By R. W. STEWART, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 4s.

"Reaches a high standard, with plenty of practical work."—*Guardian*.

OCCASIONAL NOTES.

IN the recently issued draft of the Regulations for Secondary Schools, 1922, the Board of Education makes it clear that while the present shortage of secondary school places continues it is determined that only those shall enjoy secondary education who are most likely to profit by it. In the past there has been much waste of time and effort due to two causes, late entry into the secondary school, and the shortness of school life. Both these points receive full attention in the new draft regulations. Authorities are relieved of any obligation to admit pupils, either fee-paying or free-placers, who have passed their twelfth birthday at the beginning of the school year in which they seek admission. Governing bodies may give preference to pupils who are likely to stay until at least the age of sixteen, and may exact an undertaking to this effect as a condition of admission. Furthermore, pupils who fail to make sufficient progress to justify their further continuance in the school are to be removed to make way for others who are capable of profiting by the education provided. In order to provide further accommodation for able boys between the ages of ten and eighteen, the Board empowers a school authority to refuse admission to pupils under ten years of age. It is further laid down that if pupils are admitted below the age of ten, such pupils must not be retained in the school after the end of the school year in which they become eleven, unless they pass the normal school entrance examination set to pupils of ten years of age. This regulation would seem likely to cause trouble if it is strictly enforced. It is difficult to turn out at the age of eleven a young boy who has attended the secondary school for three or four years. Where can he go? Probably he will find his way to some less efficient private school.

IN the section dealing with advanced courses, details are given of a new course in which Geography will be the main subject. It is left to the school to decide what subjects are to be studied along with Geography, the only conditions being that either History or a Science be included. This new course will be welcomed by many teachers who felt that Geography was being seriously neglected in the Advanced Course Regulations. With regard to the curriculum generally, the Board states that it has had under consideration the reports of the four "Subject" Committees, but that it is not prepared to lay down any hard and fast rules in order to enforce the recommendations made by these committees; the Board will be prepared to consider any well planned proposals which are placed before it. Most teachers will welcome this attitude, and rejoice that scope is thus left for initiative and originality. A short paragraph is added to the Grant Regulations, making it clear that the Substantive Grants will in future be paid only to schools not provided by a local Education Authority. As to fees, it is stated that, save by the special permission of the Board, fees shall be uniform for pupils of all ages.

THE published correspondence between Mr. Fisher and the Froebel Society, and the subsequent action of the London County Council with regard to the staffing of infant schools, undoubtedly leave a painful impression upon the minds of those best qualified to judge. During the past fifty years some of the finest educational work in this country has been done in connexion with the training of young children. Fortunately the infant schools never came fully under the desolating effects of "payment by results," and so the pioneers were free to draw their inspiration from Pestalozzi and Froebel, rather than from Robert Lowe—a distinction with a difference indeed! When one thinks of the trained infant-school teacher's careful preparation in child hygiene, knowledge of child nature, games, and physical training, story-telling, nature-study, drawing, handwork, and the intelligent teaching of number and form, not to speak of the management of large classes, one is ready to despair of Mr. Fisher's airy *dicta* on the whole subject. The most charitable supposition is that he is unfamiliar with the matter. He would be better worth listening to if he were talking about undergraduate instruction in history. Here he is surely out of his depth. The idea seems to be that a girl clerk after three months' training is good enough to teach infants, whereas the trained teachers of infants now leaving the training colleges may, for aught the authorities care, get posts as clerks. If Mr. Fisher had defended his procedure simply on grounds of economy, we should have partly understood him; but that he should defend it in principle is a sight which we did not think we should live to see.

A MEMORANDUM, drawn up by Mr. Spurley Hey, on the supply and the preliminary education of intending teachers in Manchester, has more than a local interest. As to the supply of teachers, Mr. Hey starts from the conviction that the present difficulties in the way of educational development will soon disappear, and that, as there is little hope of the success of such devel-

opment unless the elementary schools are efficient, an adequate and suitable supply of well-equipped teachers must even now be kept well in view. He recommends, *inter alia*, that the co-operation of elementary teachers, which practically ceased with the abolition of the old pupil-teacher system, should again be enlisted, and that that of secondary and central school head teachers should be secured. Maintenance grants should be more generous where there is necessity, and the conditions of service in elementary schools, apart from salaries, should receive attention. As to the preliminary education of intending teachers, one of the most important points to be determined is the real value of the student-teacher, year. Does the teaching experience gained really compensate for, and justify, the unfortunate breach of continuity in the student's own education, and in the influence of the secondary school upon his development? Would it not be better, in other words, that the training colleges should receive the sixth form, rather than the fifth-form product? If Mr. Hey or some one else could conduct a statistical inquiry into the careers of teachers who have never passed through the student-teacher stage, the gain might be great.

LOCAL AUTHORITIES may well be bewildered by the number of regulations issued by the Board of Education. If, however, these publications are not always easy to understand, it may be taken for granted that their object is to limit the expenditure of the Central Authority and increase the burden of the Local Authority. The regulations just issued do not appear to differ in substance from those previously in operation. That pupils must be in need of assistance to enable them to enter upon or to continue in attendance at a suitable course of education is insisted upon, and it is definitely ordained that expenditure on maintenance grants to pupils, in aid of whose maintenance grants are made by the Board under other regulations, will not be recognized. Training for the profession of teaching, compared with training for other professions, is inexpensive. At the same time, the grants to Training Colleges do not cover the whole cost of instruction and maintenance; consequently there are still a considerable number of boys and girls who qualify for admission to the Colleges, whose parents are not in a position to meet the relatively small fee payable. Local Authorities have made grants to assist students in their need, but in future such expenditure will not rank for "substantive" grant. And so far as we can discern, such expenditure will not rank for "deficiency" grant. If this is a correct interpretation of the regulations, it will be a serious blow to intending teachers whose circumstances are necessitous.

THE names of the members of the Departmental Committee on the School Teachers (Superannuation) Act have been published, and, in view of the task that lies before them, the records of some of them are interesting. Lord Emmott, the chairman of the Committee, as Director of the War Trade Department, and Mr. W. L. Hitchens, as a member of the Egyptian Ministry of Finance and Treasurer of the Inter-Colonial Council of the Transvaal and the Orange River Colony, have had considerable experience in public business. Lord Kenyon is Senior Deputy

Chancellor of the University of Wales, and Sir A. Holison Pro-Chancellor of Sheffield University and Chairman of the Council for University Superannuation, London. Sir W. A. Watson is the Government Actuary and Sir J. Struthers is the late Secretary to the Scottish Education Department. Sir Michael Sadler is Chairman of the Teachers' Registration Council. Messrs. H. R. Rathbone, G. C. Upcott, and D. Fraser, Miss S. E. Fry, and Mr. H. J. Simmonds complete the committee. With the exception of Sir J. Struthers and Mr. Simmonds, the former of whom, no doubt, will co-ordinate suggested modifications of the English Act with the provisions of the Scottish Act, none of the Committee has any direct knowledge of the actual working of the Act and its rules and orders, though several, notably Sir Michael Sadler, have some knowledge of and sympathy with teachers. Until recently, Mr. Simmonds was Secretary of the Pensions Branch of the English Board of Education, and is still attached to that Department. Though teachers will readily agree that they always found Mr. Simmonds sympathetic, there exists a strong feeling that the absence from the Committee of any representatives of the teachers themselves must weigh down the scales against them. This is especially so in the case of secondary school teachers whose anomalous position under the Act has resulted in much hardship and injustice and consequent irritation and resentment.

LAST year over £900,000 was expended in providing meals for school children, and the Board of Education recently announced in Circular 1273 that one-third of that sum only would be available for the present financial year. Local Education Authorities were requested to frame their estimates accordingly. The figures submitted, however, exceed the limit by some £138,000. Some Authorities, in whose areas unemployment is still very prevalent, have largely reduced their estimates, while others, under similar conditions, have maintained or increased them. The Board has decided, therefore, that unless the Authorities themselves take the initiative and further reduce their estimates, so much of the estimated expenditure will be disallowed for the calculation of grant as may be necessary to bring the total expenditure within the sum available. It is, of course, in the Boroughs and Urban Districts where the bulk of the expenditure is incurred. In the administrative counties the estimate for the current year is £41,000, as compared with an expenditure of £224,000 last year.

SIR RICHARD GREGORY, in his Presidential Address to the Educational Section of the British Association, defined Education as "the deliberate adjustment of a growing human being to its environment." He pointed out that teachers are prone to forget that the standards by which the results of scientific investigation are judged are not necessarily those of practical application. While we willingly pay tribute to the wisdom of the intellectual giants of the past, we should not let it control present thought or future policy. It is an astounding fact that although less than 3 per cent of the pupils from state-aided secondary schools proceed to universities, yet most of the science instruction in the schools is based upon

Committee on
Superannuation.**

syllabuses of the type of university entrance examinations. Teachers generally will welcome the inspiring plea which Sir Richard makes for a broader aspect in science teaching in schools. At present the laboratory determines the main extent of the teaching, and there is much to be encouraged in the advocacy of an additional and independent course in no way limited by the exigencies of practical work. Coherence is, however, essential, and geography may perhaps be looked to as a unifying principle, for it could provide the content of a humanistic science course. In another column will be found a more detailed account of Sir Richard's pronouncement on school science.

IT was due to Prof. Armstrong, ably backed up by Prof. Miall and Perry, that Section L (Education) was born at Glasgow in 1901. The Section was established with the object of devoting

The Majority of Section L.

attention to the introduction of scientific conceptions into every sphere of educational activity; to deal with the science of education and not merely with science in education. Whilst excellent work has been done in furthering this object, yet the Section has languished from time to time, owing to the inherent desire of the specialist teacher to follow closely the section dealing with his own particular subject. No more fitting tribute to the work of Sir Richard Gregory in the cause of science in connexion with education could have been rendered than his election to the presidential chair on the "coming of age" of the Section. Sir Richard has been a member of the Section since its inception, and as secretary and recorder he has always greatly influenced its activities. The Section indeed should become the medium for the issue of accepted authoritative views on educational practice, but it must first expand naturally by the growth of a body of past officers who retain their interest and continue their activity, and the attendance of leading representatives of all branches of the teaching profession.

THE revised regulations for Whitworth scholarships, which have just been issued, conform with recent practice in the award of similar scholarships in that the

Whitworth Scholarships.

graduate is catered for as well as the undergraduate. Instead of the old classification of scholarships and exhibitions, there are to be six Whitworth Scholarships of an annual value of £125, or more, tenable for three years, and two Whitworth Senior Scholarships of an annual value of £250, tenable for two years. There are also prizes to the value of £10 which may be awarded to not more than twenty-five competitors whose work deserves recognition. For the ordinary scholarships, a candidate must not have completed the twenty-first year of his age by May 1st of the year in which he competes, and the standard of the examination appears to be about the same as that expected under the old regulations. For the Senior Scholarships the age limit is twenty-six—except in the case of a candidate who served in H.M. forces during the war and who may deduct from his age a period equivalent in length to such services—and the standard expected is that reached by a graduate who has taken high honours in engineering. These awards, particularly the Senior Scholarships, rank among the most valuable of those now available to the engineering student, and there will be keen

competition for the privilege of describing oneself as 'Senior Whitworth Scholar.'

EXCEPT for the new grade, there is but little modification in the regulations, and we should like to be assured that the "proficiency in handicraft" of a successful candidate will be tested in as comprehensive and searching a manner as his knowledge of theory.

Proficiency in Handicraft.

There is a dangerous tendency to exalt theory at the expense of practical craftsmanship, and we doubt if the candidate who has only been "engaged in handicraft in a mechanical engineering workshop" for the bare thirty months specified in the regulations, would necessarily have been regarded as eligible by Sir Joseph Whitworth. The word "*may*" in the second line of qualification (d) might, with advantage, be altered to "*will*."

THERE has recently been some complaint of the high cost of education at public and preparatory schools.

It is said that £200 a year is too high a price to pay for the education and board of a boy or girl of nine for thirty-six weeks in the year.

Cost of Education.

It is undoubtedly high for a professional man who is poor on £1,000 a year if he has more than two children, and wishes to live an educated life. And what makes it harder is when the poor professional man, who wishes to give his children as good an education as he himself has had, sees that so many are educated for nothing and do not appreciate the education they receive. For, as a commercial race, we are apt to value at nothing what we receive for nothing. But what the critics of the cost of education should remember is that the increase is mainly due to the teachers receiving at last almost a living wage. Before the war no class, except curates, was so badly paid or so looked down on as the assistant master or mistress. We have not forgotten the town where the lavatory attendants were better paid than the masters, and the charwomen better than the mistresses. Now the teachers have obtained a fraction of what is due to those on whom the whole future of the race depends. It is ridiculous for the civil servant, the barrister, or the doctor, with his £1,000 a year to grumble at the £400 of the assistant master, who works often harder on work that is as important and more monotonous than that of most other professions. It is useless to try to persuade the fashionable public schools to reduce their fees when they have long waiting lists of the sons and daughters of the new rich, and the grant-earning schools are not in a position to reduce fees since they are under a statutory obligation to give free education to 25 per cent of their pupils. Of the two alternatives—reduction of salaries and reduction of fees—the former is inequitable and the latter apparently impossible.

SINCE the May science examinations of the Board of Education were discontinued some years ago, the work of students in technical schools has been tested by internal examinations or by the examinations of an approved local body such as a county examining board or the Union of Lancashire and Cheshire Institutes, and, under certain conditions, course certificates endorsed by the Board of Education have been awarded by the schools. Last session the Board made arrangements with the Institution of Mechanical Engineers and the

Science Examinations.

Institute of Chemistry, whereby the professional body undertook the responsibility of moderating the questions and assessing the marking of the papers, in the case of approved schools and local examining boards. Where the conditions (Rules 106 for Mechanical Engineering and Rules 100 for Chemistry) have been satisfied, a national certificate or diploma in mechanical engineering or a national certificate in chemistry or applied chemistry is awarded.

Technical Certificates. IN mechanical engineering a certificate of ordinary grade is awarded at the end of a three year part-time course, and a certificate of higher grade for a further two years' part-time course. Full-time students in mechanical engineering can secure an ordinary or higher diploma for a two or three years' course, while similar students in chemistry can obtain a certificate in chemistry for a three years' and a certificate in applied chemistry for a four years' course. Whatever defects attended the old Science and Art Examinations, their discontinuance has created chaos. The establishment of the new certificates is to be welcomed because it permits standardization without interfering seriously with individual freedom, while the association of a professional body with the work of the schools will increase both the intrinsic value of the certificates and the esteem in which they are held in industry. Whether the standard be high or low, it will at least be intelligible, and that cannot be said when each school awards its own certificate.

Certificates for Teachers in Schools of Art. IN our issue for January, we commented—in connexion with Rules 109 of the Board of Education dealing with the Board's Teaching Certificate for teachers in schools of art—on the great improvement which had taken place during the last decade in this branch of the teaching profession, and the far wider outlook which is now required from the art teacher than was formerly the case. The art student of the past devoted too much time to unintelligent copying; to "studying Raphael instead of what Raphael studied." The enthusiastic worship of the antique, which at the time of the Renaissance was a living force inspiring original work, had degenerated into a lifeless tradition in the schools, which not only failed to inspire a real understanding of and love for the classical masterpieces, but was also out of touch with the needs of the present day. The realization on the part of the authorities of the comparative sterility of our art schools led to an entire revision of the rules dealing with the Board's Teaching Certificate; and the keynote of the revised rules is struck by paragraphs ii. and iii. in the Syllabus for the Examination in the Principles of Teaching and School Management, which require that the prospective teacher should understand the relation of Art to the life of the individual and the community, its place in educational systems and its relation to Industry. It is also refreshing to read a condemnation of "the feeble repetition of moribund scholastic styles," and a recommendation that students should get motives for design and colour schemes from personal observation of nature.

THE revision of the Rules led inevitably to certain difficulties with regard to existing diplomas, and we are glad to see that in the Rules for 1922 these

have been dealt with. Holders of the Diploma of Associateship of the Royal College of Art, or the London University Diploma in Fine Art, may have an endorsement provided that they satisfy the requirements in respect of general education, physical fitness, professional training or teaching experience, and the passing of the examination above-mentioned. Any reform must involve some hardship for individuals, and in this case the hardship is probably as small as is compatible with the very radical change which has been effected.

Existing Art Diplomas. IN her presidential address to the Geographical Section of the British Association, Dr. Marion Newbigin took as her subject "Human Geography: First Principles and some Applications." Dr. Newbigin prefaced her address by remarking that geography had not yet received adequate recognition either in the Universities or in public estimation, and she considered that the time had now come for a determined effort on the part of geographers to convince the ordinary citizen that geography in its modern aspects is a subject of direct interest and value to him in his daily life. A study of the human response to the surface phenomena of the earth would probably appeal most strongly to the general reader, and the speaker emphasized this by discussing briefly the development of three types of civilization due to well-marked and distinctive geographical conditions, *viz.* the river valley type in Babylonia, and early Egypt; the Mediterranean type on parts of the seaboard of the midland sea; and the forest type of Central and Western Europe. Among many interesting suggestions contained in the address, feudalism was referred to as a kind of organization which permitted the clearing of the forests while fixing the cultivator to the land, and thus feudalism became an artificial device for rendering the population stationary, and enabling it to adapt itself to the local relief and associated phenomena.

The Elementary School Code, 1922. THE new issue of the Elementary School Code contains nothing of importance that was not to be expected from the march of events during the last three years. The most significant of the changes are those which follow from the familiar economy campaign. We are now told in set terms that the Board of Education will allow the employment, "in urban as well as rural areas, of women teachers, not possessing the academic attainments of certificated or uncertificated teachers, but suitably qualified for work in classes in which the majority of the children are under six years of age." We reiterate our conviction that, considering how slender may be the "academic attainments" of an uncertificated teacher, this provision is a source of danger to the schools and to the teaching profession, and that it constitutes a blot upon the Code. We note also, with misgiving, the Board's formally expressed intention to take action "where the general standard of staffing in an area appears to be unduly high in relation to present conditions." The Board used to complain of laggard local authorities. It seems now to be the turn of progressive local authorities to complain of a laggard Board, *i.e.* of a laggard State. We hope and believe that the country will before long waken to the fact that the schools are really in danger.

SCHOOL SCIENCE.*

By SIR RICHARD GREGORY.

THE essential mission of school science is to prepare pupils for civilized citizenship by revealing to them something of the beauty and the power of the world in which they live, as well as introducing them to the methods by which the boundaries of natural knowledge have been extended and Nature herself is being made subservient to her insurgent son. Acquaintance with scientific ideas and methods and applications is forced upon every one by existing circumstances of civilized life with its facilities for rapid transport by air, land, or sea, ready communication by telephone or telegraph, and other means by which space and time have been brought under control and man has assumed the mastership of his physical and social destiny. Science permeates the atmosphere in which we live, and those who cannot breathe it are not in biological adjustment with their environment—are not adapted to survive in the modern struggle for existence.

School instruction in science is not, therefore, intended to prepare for vocations, but to equip pupils for life as it is and as it soon may be. It is as essential for intelligent general reading as it is for everyday practical needs; no education can be complete or liberal without some knowledge of its aims, methods, and results, and no pupil in primary or secondary schools should be deprived of the stimulating lessons it affords. In such schools, however, the science to be taught should be science for all, and not for embryonic engineers, chemists, or even biologists; it should be science as part of a general education—unspecialized, therefore, and without reference to prospective occupation or profession, or direct connexion with possible university courses to follow. Less than 3 per cent of the pupils from our State-aided secondary schools proceed to universities, yet most of the science courses in these schools are based upon syllabuses of the type of university entrance examinations—syllabuses of sections of physics or chemistry, botany, zoology, and so forth—suitable enough as preliminary studies of a professional type to be extended later, but in no sense representing in scope or substance what should be placed before young and receptive minds as the scientific portion of their general education. Such teaching excuses the attitude of many modern Gallios among schoolboys caring "for none of those things." The needs of the many are sacrificed to the interests of the few, with the result that much of the instruction is inept and futile whether judged by standards of enlightenment or of stimulus. Exceptional pupils may profit by it, but to others, and particularly to teachers of literary subjects in the school curriculum, it often appears trivial or sordidly practical, and is usually spiritless—a means by which man may gain the whole world, but will lose his soul in the process.

This impression is not altogether unjust, and the teaching of recent years has tended to accentuate it. The extent of school science is determined by what can be covered by personal observation and experiment—a principle sound enough in itself for training in scientific method, but altogether unsuitable to define the boundaries of science in general education. Yet it is so used. Every science examination qualifying for the First School Certificate, which now represents subjects normally studied up to about sixteen years of age, is mainly a test of practical acquaintance with facts and principles encountered in particular limited fields, but not a single one affords recognition of a broad and ample course of instruction in science such as I believe is required in addition to laboratory work. I have not the slightest intention or desire to suggest that practical work can be dispensed with in the teaching of any

scientific subject, but I do urge that it becomes a fetish when it controls the range of view of the realm of natural knowledge capable of being opened for the best educational ends during school life.

It is now generally recognized that up to the age of about sixteen years there should be no specialization in school studies. The First School Examination was organized with this end in view, and seven examining bodies have been approved by the Board of Education to test the results of instruction given in (1) English subjects, (2) languages, (3) mathematics and science, which constitute the three main groups in which candidates are expected to show a reasonable amount of attainment. The number of candidates who presented themselves at examinations of the standard of First School Certificates last year was about 42,000; and of this number 12,500 took papers in sections of physics, 13,000 in chemistry, 11,400 in botany, 5,000 physics and chemistry combined under experimental science, 113 natural history of animals, 31 geology, and 3 zoology.

These numbers may be taken as a fair representation of the science subjects studied in most of our secondary schools, and they suggest that general scientific teaching is almost non-existent. Botany is a common subject in girls' schools, but the instruction in science for boys is limited to parts of physics and chemistry. The former subject is usually divided into mechanics and hydrostatics; heat; sound and light; and electricity and magnetism; and candidates are expected to reach a reasonable standard in two of these sections. They may, therefore, and often do, leave school when their only introduction to science is that represented by the study of mechanics and heat, and without the slightest knowledge of even such a common instrument as an electric bell, while the ever-changing earth around them, and the place of man in it, remain as pages of an unopened book. They ask for bread, and are given a stone. General science covering a wide field is practically unknown as a school subject, and even general physics rarely finds a place in the curriculum because questions set in examinations are, to quote from the Cambridge Locals Regulations, "principally such as will test the candidate's knowledge of the subject as gained from a course of experimental instruction." This condition reduces the range of instruction in such a subject as physics to what can be covered in the laboratory, and makes a general course impossible; for time and equipment will not permit every pupil to learn everything through practical experiment. Reading or teaching for interest, or to learn how physical science is daily extending the power of man, receives little attention because no credit for knowledge thus gained is given in examinations.

One or two examining bodies have introduced general science syllabuses covering the rudiments of physics and chemistry as well as of plant and animal life, but even in these cases most of the subjects must be studied experimentally, and no place is found for any other means of acquiring knowledge. The result is that few schools find it worth while from the point of view of examinations successes to attempt to cover such schemes of work. Moreover, no clear principle can be discerned by which the syllabuses are constructed. General science should be more than an amorphous collection of topics from physics and chemistry, with a little natural history thrown in as a sop to biologists. It should provide for good reading as well as for educational observation and experiment; should be humanistic as well as scientific. The subject which above all others has this double aspect is geography; so truly, indeed, is this the case that in the First School Examinations it may be offered in either the English or the Science group. Practically all the subjects of a broad course of general science are of geographical significance, inasmuch as they are concerned with the earth as man's dwelling place, and the scene of his activities. A school course which would cover all the science required for the study of geography conceived as a branch of knowledge concerned

* From the Presidential Address on "Educational and School Science," delivered to the Educational Science Section of the British Association at Hull, on September 7.

with the natural environment of man and the inter-relations between him and those circumstances would not only be educational in the broadest sense, but would also be the best groundwork for effective teaching of geography, history, and other humanistic studies.

It is impossible to be true to heuristic methods in the teaching of science so ably worked out by Prof. H. E. Armstrong and at the same time pay addresses to a syllabus. A single question raised by a pupil may take a term or a year to arrive at a reasonable answer, and the time may be well spent in forming habits of independent thinking about evidence obtained at first-hand but the work cannot also embrace a prescribed range of scientific topics. Yet under existing conditions, in which examinations are used to test attainments, this double duty has to be attempted by even the most enlightened and progressive teachers of school science. There can, indeed, be no profitable training in research methods in school laboratories under the shadow of examination syllabuses. Where there is freedom from such restraint, and individual pupils can be permitted to proceed at their own speeds in inquiries initiated on their own motives, success is assured, but in few schools are such conditions practicable; so that, in the main, strict adherence to the heuristic method is a policy of perfection which may be aimed at but is rarely reached.

The mission of school science should not, however, be only to provide training in scientific method—valuable as this is to every one. Such training does cultivate painstaking and observant habits, and encourages independent and intelligent reasoning, but it cannot be held in these days that any one subject may be used for the general nourishment of faculties which are thereby rendered more capable of assimilating other subjects. Modern psychology, as well as everyday experience, has disposed of this belief. It has now to be acknowledged that information obtained in the years of school life is as important as the process of obtaining it; that, in other words, subject matter as well as the doctrine of formal discipline must be taken into consideration in designing courses of scientific instruction which will conform to the best educational principles.

One of the functions of school science is to provide pupils with a knowledge of the nature of everyday natural phenomena and applications, and of the meaning of scientific words in common use. Instead of aiming at creating appreciation of scientific method by an intensive study of a narrow field, a wide range of subjects should be presented in order to give extensive views which cannot possibly be obtained through experimental work alone. The object is indeed almost as much literary as scientific, and the early lessons necessary for its attainment ought to be within the capacity of every qualified teacher of English. Without acquaintance with the common vocabulary of natural science a large and increasing body of current literature is unintelligible, and there are classical scientific works which are just as worthy of study in both style and substance as many of the English texts prescribed for use in schools. We all now accept the view that science students should be taught to express themselves in good English, but little is heard of the equal necessity for students of the English language to possess even an elementary knowledge of the ideas and terminology of everyday science, which are vital elements in the modern world, and which it is the business of literature to present and interpret.

So much has been, and can be, said in favour of broad courses of general informative science, in addition to laboratory instruction and lessons which follow closely upon it, that the rarity of such courses in our secondary schools is a little surprising at first sight. Their absence seems to be due to several reasons. In the first place, the teachers themselves are specialists in physics, chemistry, biology, or other department of science, and they occupy their own territory in school as definitely as Mr. Eliot Howard has shown to be the behaviour-rolutine of birds in woods and

fields. Natural science as a single subject no longer exists either in school or university, and with its division and subdivision has come a corresponding limitation of interest. No man can now be considered as having received a liberal education if he knows nothing of the scientific thought around him, but it is equally true that no man of science is scientifically educated unless his range of intellectual vision embraces the outstanding facts and principles of all the main branches of natural knowledge. It cannot reasonably be suggested that this general knowledge of science should be acquired by all if teachers of science themselves do not possess it.

Where such teachers do exist, however, they are compelled by the exigencies of examinations to conform to syllabuses of which the boundary lines are no more natural than those which mark political divisions of countries on a map of the world. All that can be said in favour of the delimitation of territory is that it is convenient; the examiner knows what the scope of his questions may be, and teachers the limits of the field they are expected to survey with their pupils. While, therefore, it may be believed that a general course of science is best suited to the needs of pupils up to the age of about sixteen years, examining authorities recognize no course of this character, and very few schools include it in the curriculum. Expressed in other words, the proximate or ultimate end of the instruction is not education but examination, not the revealing of wide prospects because of the stimulus and interest to be derived from them, but the study of an arbitrary group of topics prescribed because knowledge of them can be readily tested.

A third reason for the relative absence of general scientific education in schools is the demands which the teaching might make upon apparatus and equipment. Simple quantitative work in physics, chemistry, or botany can be done in the laboratory with little apparatus, and a single experiment may occupy a pupil for several teaching periods. To attempt to provide the means by which all pupils can observe for themselves a wide range of unrelated facts and phenomena belonging to the biological as well as to the physical sciences is obviously impracticable, and would be educationally ineffective. It is very difficult to devise a laboratory course of general science which shall be both coherent and educative; shall be, in other words, both extensive in scope and intensive in method. I doubt, indeed, whether any practical course can perform this double function successfully. Probably the best working plan is to keep the descriptive lessons and the experimental problems separate, using demonstrations in the class-room as illustrations, and leaving the laboratory work to itself as a means of training in scientific method or of giving a practical acquaintance with a selected series of facts and principles. The main thing to avoid is the limitation of the science teaching to what can be done practically; for no general survey is possible under such conditions.

As in art, or in music, or in literature, the intention of school teaching should be mainly to promote appreciation of what is best in them rather than to train artists, musicians, or men of letters, so in science the most appropriate instruction for a class as an entity must be that which expands the vision and creates a spirit of reverence for Nature and the power of man, and not that which aims solely at training scientific investigators. It should conform with Kant's view that the ultimate ideal of education is nothing less than the perfection of human nature, and not merely a goal to be obtained by the select few.

School science must have a broader outlook if it is to lie closer to the human heart than it does at present, and a common bond of sympathy is to be formed between all who are guiding the growth of young minds for both beauty and strength. So will the community of educational aims be established and the place of science in modern life be understood by a generation which will be entrusted with the task of making a new heaven and a new earth.

THE CONFERENCE ON THE SPIRITUAL BASIS OF EDUCATION.

THE remarkable Conference at Manchester College, Oxford, which was held from August 15 to 29, may be regarded as one of the most important educational events of the year. In the absence of the Hon. H. A. L. Fisher, who was engaged at Geneva on behalf of the League of Nations, the presidential address was read by the Secretary of the Conference, Mrs. Mackenzie. Despite the somewhat transcendental title of the Conference—one speaker declared that he usually found talk about spirituality to encourage loose and vague thinking—the papers were eminently sane and practical. Mr. Malcolm Thompson of the League of Youth gave an excellent address on the international work of university students federated to prevent future wars. Dr. Maxwell on the Foundations of World Citizenship, and Mr. Delisle Burns on the Organization of Peace were eminently practical and sensible.

Dr. Steiner has been described as a philosopher, man of science, teacher, thinker, and innovator. He is the author of several works that have a European reputation. In 1919 a wealthy industrial of Stuttgart gave him the opportunity of putting certain theories into practice, and he founded Waldorf, a co-education school, with a staff of teachers specially trained by himself. It began with 150 children of factory workers, and now numbers nearly 700 of all classes. Dr. Steiner still directs the school and is also director of the Goetheanum at Dornach, Switzerland, in which the training of teachers and general study of things spiritual are carried on. It is an article of his faith that things spiritual are best recognized in their fruits.

The lectures by Dr. Steiner might be summed up as a noteworthy plea for liberty for the teacher and the taught. The best possible programme, said the lecturer, drawn up by the twelve most distinguished educationists in the world, would not obtain the desired results if they minimized the teacher's individuality—the use of his powers in his own way. The teacher is an artist, and, like other artists, must use his gifts as best he can. And the liberty of the child is not easy-going indifference on the teacher's part, but direction based on correct knowledge of child nature, on the working of body, soul, and spirit. The yogi and eastern philosophers looked within for spiritual knowledge; the immense discoveries of natural science compel modern man to look without, to survey the whole field, to deduce right methods from adequate knowledge. One of Dr. Steiner's lectures dealt with the distinction he draws between soul and spirit. The real soul is not visible, we perceive its manifestations through the spirit. In walking we leave footprints on soft soil and it is evident some one has passed. Even so the soul makes its imprints on the body by the spirit, which is active and creative. Spirit is therefore not the mind or intellect which is passive. A productive, active, creative reality lies behind mind; the soul manifests itself through spirit. It is as different from the spirit as the mirror-image of a man differs from the real living personality. Our conception of spirit is not deep enough, we attribute too much to mind or intellect. The great achievements of natural science scarcely touch the spirit, which yet is the basis of all reality. It is for the teacher to grasp the whole human being, body, soul, and spirit, and this demand meets him again and again. The subconscious works in the child, the teacher must work with conscious knowledge.

Child life may be divided into three great periods:

(a) From birth to the age of seven or change of teeth. He observes his surroundings, imitates all around him, builds his new teeth and body. He is all sense-organ, and requires an immense amount of sleep to rest from his great task of sensing the world and body-building.

(b) From the change of teeth to puberty the child is of school age and falls under the teacher's influence. He needs a mediator between himself and the external world. The teacher must not have the sense of his own cleverness,

but rather realize that he is stupid and the child clever. It is pre-eminently the age of soul-development and the more the teacher realizes this, the better will he teach. He must work as an artist, know his material, deal with it in an inspired way, teaching by mental pictures. Remembering that growth covers the whole of life, he must leave the child to make his own connexions; he must not overlay the child's mind with finished logical thoughts, but present the world pictorially and imaginatively.

(c) At fourteen or so the child has reached the period of logical understanding, mind or intellect takes a greater place. Intuition is necessary to understand the first phase; inspiration is necessary for the second or soul-period; whilst to educate the adolescent, the teacher must have spiritual sympathy and must bethink himself that some of the children before him may possess abilities surpassing his own. It is his task to help the child to build a strong, healthy body, so that physique be not a hindrance in after life. Dealing with the physical, Dr. Steiner showed how injurious it is for an infant to be with anxious, careworn persons, since he unconsciously absorbs their attitude to life, one that has an injurious effect on the bodily organs, and is apt to develop stunted kidneys. When the memory is overloaded in childhood, a tendency to gout or rheumatism may appear in later life; when it is insufficiently exercised, an inflammatory condition of the blood may result between sixteen and twenty. It is for the teacher to give effect to what physiology and psychology teach us.

The soul expresses itself in three great faculties: thinking, feeling and willing, and the spiritual knowledge of man depend on a right perception of this. Over thirty years ago Dr. Steiner saw it was an error to attribute all these faculties to the nervous or head-system. Only thinking is directly related to it; feeling is related to the rhythmical processes, to breathing and the pulsation of the blood. The will is directly connected with the metabolic, assimilative and limb-moving processes. These two last, the rhythmical and digestive processes, can throw a picture up into the brain, but feeling and will do not originate there. This is the A B C of that science of man which the teacher needs; he will be able to interpret rightly blushing, pallor, quickened breathing, &c. With correct knowledge, he will focus the microscope and see clearly what was blurred and confused. Mental conceptions can be rapid and complete; the things of the spirit are often very slow. Teachers must accept the labours of others in this field, just as many astronomers accept the transit of Venus without having observed it themselves.

Dr. Steiner had much to say on how writing should precede reading, on how arithmetic should be taught in order to evoke the social sense, on the age at which different subjects should be begun, on dividing large classes by sorting the children according to temperament.

The lectures (in German) were heard with marked and impressive attention and translated in sections by Mr. Geo. Kaufmann, M.A. (Cantab.); at their close a resolution was unanimously passed to form a society for the purpose of founding schools on the lines indicated and of helping to spread Dr. Steiner's ideas in existing institutions.

C. S. BREMNER.

[A verbatim report of these vivid and inspiring lectures will be published shortly and can be obtained at the offices of the Anthroposophical Society, 46 Gloucester Place, London, W. 1.]

MISS ISABEL DICKSON, whose death is reported, was the first and only woman Assistant Secretary in the Civil Service. A native of Scotland, Miss Dickson was educated at St. Andrew's and Girton College, Cambridge. For the last seventeen years she had been in the Civil Service at the Board of Education. She was one of the first women to be appointed an inspector of schools, and the first woman to be an inspector of training colleges. She was appointed Assistant Secretary at the Board of Education in 1919.

REMINISCENCES OF AN EX-HEAD MASTER.

BY "RUDE DONATUS."

V.

OF OLD BOYS.

THE School's most important asset. They can make it or mar it. A Head who does not understand this from the first has not learnt the alphabet of school keeping; but it is not an easy alphabet. He must set himself to learn it. He must learn it if he would be not merely a school master but the Master of a school. The goodwill of senior members of the school can be easily lost; and once lost it is almost impossible to regain. In fact, it is scarcely too much to say that if a Head cannot collect round him and keep the friendship of old boys of the school he had better pack his portmanteau and clear out. It may be that he will keep the school going, but he will be changing its *modus* yearly and quite surely. The name remains but the thing is gone. Nor is it good to over exaggerate the difficulties. If the Head has common sense and a grain of humour he has only to be perfectly natural and he will find his efforts met half way. But it is an anxious time until he has, so to say, paid his footing among the old boys. They do not demand impossible things, but they do demand a welcome—a hearing—and an invitation to come again. The rivalry between public schools on the same level is very great, and in normal times there are barely enough boys to go round. One sure source ought to be the sons and grandsons, the nephews, and friends of "former members" of the school. Once a member, always a member—and none are more truly members than those who have passed beyond the early years and can look back upon their school days. What, then, should the Head set himself to recognize and to do? Amongst other things he must classify the old boys, and classify them roughly by "anno domini."

There are—by a rough generalization—three stages, *viz.* the patronizing—the human—the reminiscent. The first is the most difficult to deal with wisely; and as he feels a wariness in his attempts he must say to himself, "It will pass: he will grow older and more human." When those who have but lately passed into the outside life come back to visit their school and those whom they remember perhaps too well, the Head—until he has experience—is bewildered by the certainty, the cocksureness, the self-sufficiency of the very young men. They know so much and talk so loud. It may even be that their clothes are offensive, and the Head longs to tell them so. He must recognize that their enthusiasm for their new life is certain to have an effect upon the way they think of their school. But if manners rub and voices grate; if the young men are over emphatic about what ought and ought not to be done; if they complain of changes for the worse in "my old house"; if some privilege be taken away here and a new one granted there; if "rags" at accustomed dates are no longer winked at; if the cult of the athlete is somewhat lost; if an unheard of desire for things intellectual surprises them in their visits, they do not scruple to give their opinion that "the place has gone down in the last year or two." None the less, let not the Head lose heart or temper. These young men have a very real love of the place which held them for five or six of the best years of their life: they have a zeal even if it be not altogether according to knowledge. A jest—even a very bad one—if the Head attempts it—will be more than welcome, and those glorious young fellows will go away and say that "there are some rotten changes—but the school's all right and the new Head not half a bad sort." And so they grow older in years, and the Head grows older in the school life. He is more sure of himself and they pass into the "human" stage. They have now a truer perspective, and have rubbed against many sides in the world. Self-sufficiency has a good deal gone by the

board: many of them have married and have heard some wholesome home truths: most are absorbed in the duty of making both ends meet and have no time for fooling. So when they pay their infrequent visits they can talk with the Head as man with man and can give him very real help. He can make them feel that they are no strangers in a foreign land, but that he is on the look out to make them at home, to listen and to learn. Moreover it may well be that they can give him many useful hints about the way the school is talked about, and this not by way of gossip but with the true desire to help the place to which they owe very much. These are the men who are looking forward to sending their sons in due course to their old school, and they go a long way to reduce the Head's anxiety for the future. It may seem thankless to class the seniors, those who are slipping down the hill, as those in the reminiscent stage; but the wise Head has a special welcome for such. The dark spots in school life are forgotten—the gold remains. If anecdote follows anecdote, and one vies with another about former days, it is all to the good. These sires of old will think little of you as compared with the Head of their time—and in all probability quite rightly; but they are ready to suffer fools gladly for the sake of the times gone by; and they are so very easily pleased. You must give them time—they must not be hurried. The sin unpardonable is to look at the clock.

Are these generalizations unfair? Certainly they are incomplete and the classification is faulty. There are cross divisions. Who cannot think of young men who are of the salt of the earth—who have done good in their generation, and who, when they come down to see you, are just the same—unassuming, whole-hearted in their desire to help, and capable of helping—witnessing to the greatness of youth and the goodness that has grown with years? Or who can estimate the harm done to his school by one who thinks that he has knowledge and is ready to criticize, who, in his club armchair, or in the train daily to his business, talks and gossips and repeats what is probably an untrue tale, and even if true, one which an "old boy" who has no longer the excuse of youth, may well keep in silence? Simeon, son of Gamaliel, was wise when he said, "Whoso is profuse of words causeth sin."

In considering what helps the Head much in his relations with old boys, there comes the thought of the joy there is in meeting one whose interests in the past have been the same as yours. Perhaps you find that you have been on the same cricket or football tour in days past: you have fished the same river, climbed the same mountains; you have learnt the trick of the same golf course. Whatever it be, the Britisher is still an outdoor animal and loves to meet men who have gone over the same ground. If the Head has been fortunate in this, he has many ties with this old boy and with that. They have some healthy bonds between them: in their correspondence there is a freshness and a want of restraint which is good on either side. And the word "correspondence" suggests one last "jotting." It is needful to be unwearied in writing. With "old boys" it is just everything if the Head thinks it worth while to answer letters from them not perfunctorily but *con amore*. There is no surer way to retain the interest of the elders, and no trouble is too great to find time and inclination to write fully when you write at all. It means, very often, loss of leisure in the term and also in a holiday. In fact the holidays are well spent in the school's interests when the Head sets himself to gather up that which the term has perforce left undone. Young and old, they all welcome a letter. It is a compliment and more than that. It is one of the cords of a man wherewith to draw them.

DRAWING PRIZES.—At the recent examinations conducted by the Royal Drawing Society, 18 Queen Anne's Gate, Westminster, S.W. 1., there were some 90,000 candidates from 1,258 schools in the British Empire. In the British Isles, there were seventy-four prize-winners ranging in age from eight to eighteen years, and in addition sixteen special prizes were awarded

POST-GRADUATE STUDY

FOR LONDON UNIVERSITY EXAMINATIONS.

University Correspondence College

Founded 1887.

Principal: WILLIAM BRIGGS, LL.D., D.C.L., M.A., B.Sc., F.C.S., F.R.A.S.

Provides Courses of Preparation in Arts, Science, Economics, Commerce, Theology, Laws, Music, Engineering, &c. by Tutors who are specialists in their several subjects.

"A large organization that has developed remarkably upon its inherent merits. Its successes undoubtedly rest on the administrative capacity of the Principal and the academic qualifications and pedagogic experience of the staff. The College is doing eminently useful work."—*Educational Times*.

SPECIAL ADVANTAGES

offered by

University Correspondence College.

Tutors in Residence,

who correct the Student's answers *promptly*, and return them while the difficulties are still fresh in his mind.

Tutors giving their Whole Time
to the work of the College.

Specialists for each Subject,
the majority of whom have taken First-Class Honours.

Full Notes to each Lesson

in all subjects.

Printed or Typewritten Lesson Papers.

Detailed Schemes of Science Practical Work

for the Inter. Science, Inter. Arts, B.Sc., and
B.A. Pass Examinations.

Post-Graduate Prospectus

giving full particulars, post free from THE SECRETARY,

No. 14, UNIVERSITY CORRESPONDENCE COLLEGE, BURLINGTON HOUSE, CAMBRIDGE.

DR. SOPHIE BRYANT.

WHEN Mrs. Bryant more than forty-five years ago was a young mistress in the Frances Mary Buss School some of her sixth form girls used to call her Urania—the heavenly muse. It was not only that she taught them mathematics and astronomy; they felt that she had a spiritual quality like a being from a higher world; she gave them something heavenly, pure and strong and simple like herself. So she was to the end; always somewhat apart, living from an inner source of power, thinking her own high thoughts, loving truth, and that in its most abstract forms, devoted to noble ends. She was like the old Irish saints and heroes whose stories she loved to tell: her nature was like the clear light “on the fair hills of holy Ireland.”

Fortunate indeed was the school that had her as an inspiration; Miss Buss and she worked together in a beautiful fellowship, and much that was done there after 1876 was the result of this happy combination of different types who trusted and completed each other in education. Mrs. Bryant believed firmly in the value of mathematical study; in science; in training of teachers; in the selection and careful preparation for examinations of the able girls; in games and physical training; in home life, where she herself set such an example of dutiful affection and self-sacrifice. She took for granted the equality of women and men in the realm of study, as in citizenship; innate and natural, too, for hers was the old-fashioned “godliness” that goes with “good learning,” the moral and religious education centred round Holy Scripture to which she gave her last years. Because she cared for all these honest and lovely things she worked for the political causes that were dear to her, so far as her time allowed, advocating Home Rule publicly in Gladstonian days. But she had no gift for the arts of the politician, and was neither worldly nor ambitious.

As a teacher she had an extraordinary power of developing the mind and spiritualizing the aims and character of certain pupils. Her mathematical lessons were wonderful because she knew and cared for mathematical truth; one caught interest and knowledge from her. She made the best things worth while; one had to live at one's best because she took it for granted. She was never violent or harsh; that was never necessary. The efficacy of the great Christian principle, “force is no remedy,” was shown in all her pastoral work as a teacher. Reason, sympathy, courage, will; these were the qualities she fostered. No one can help every type of pupil; and there were some who did not feel her influence. But we who did have been different all our lives through it, and shall be. Yet all was with such exquisite simplicity and singleness of heart; a dignity and reserve that seemed to belong to her widowed state and her high intellectual distinction raised her above the ordinary ways of school life. Besides the direct work she did at the Frances Mary Buss School, in the foundation of the Cambridge Training College for women, on Committees and Commissions, and through her books—no small amount—she has had a far-reaching indirect influence through her pupils. At the Head Mistresses' Conference (to speak of one type only), one saw them gathering round her as if they, grey-headed women each of importance in her own sphere, north, south, east, and west, were girls again, eager to catch words of wisdom and encouragement from her as of old. How many owed all that was best in their lives to her!

Her Hampstead home was for many years the centre of a delightful social life in her Sunday afternoons and yearly garden parties; she had many friends from different worlds—professors, cragsmen, artists, M.Ps, agitators, Irish gentlewomen, musicians, besides her old girls and colleagues. During the war she was an active member of the organization of Irish ladies to help Irish regiments, and followed the deeds of their men with pride. Almost her last public work was with the Institute and Girls' School in the Hampstead Garden Suburb.

She lives in the memories of those who knew and loved her—teacher, patriot, and saint. S. A. B.

Sophie Bryant was born on February 15, 1850, in Dublin, the daughter of the Rev. W. Willock, D.D., a Fellow of Trinity College. She spent her girlhood in Co. Fermanagh, being taught mathematics along with her brothers by her father, himself a scholar. She was the first girl to win distinction in mathematics in the Senior Cambridge Local in the sixties, and coming to London, won the Arnott Scholarship at Bedford College. Her marriage with a physician, Dr. Hickeys Bryant, followed, but she was soon left a widow. In 1875 Miss Buss persuaded her to become a teacher of mathematics in the North London Collegiate School. When the London degrees were opened to women, Mrs. Bryant began at once to work for matriculation, carrying on her teaching meantime, and took the B.Sc. degree with honours in mathematics and moral science. In 1884 she became the first woman D.Sc. in philosophy; later Trinity College gave her an honorary Litt.D. In 1895 she succeeded Miss Buss as Head Mistress, and retired in 1918 after more than forty-three years continuous service. During this time she also served on many public bodies, the London Education Committee, the Senate of the University of London, the Bryce Royal Commission for Secondary Education (1894-1895), the Consultative Committee, and of course the Executive of the Head Mistresses' Association, of which she was President, 1903-1905, and the 1922 Conference, of which she attended as an honoured associate member. In the vacations she often went mountaineering, first on rock in Westmoreland, and then in the Alps, where she twice ascended the Matterhorn. Her published works include, besides an early novel and volumes of educational essays, “Celtic Ireland,” “The Teaching of Morality,” “Short Studies in Character,” “The Teaching of Christ on Life and Conduct,” and “How to Read the Bible.” A book on the Brehon law of ancient Ireland was her last winter's work. On August 14 this year during a holiday walk alone she lost her way on the lower green slopes of Mont Blanc, fell from a height, and became unconscious. A fortnight later her body was discovered, and buried in the Chamonix cemetery, among the mountains she loved so well.

PERSONAL PARAGRAPHS.

OLD pupils and masters of Dulwich College will be deeply grieved to hear of the sudden death of the Rev. Arthur Herman Gilkes, vicar of St. Mary Magdalene, Oxford, and formerly head master at Dulwich for almost thirty years. Educated at Shrewsbury School, he obtained first-class Lit.Hum., from Christ Church, Oxford, in 1871. He was appointed head of Dulwich in 1885, after having been a master at Shrewsbury for twelve years. Mr. Gilkes had an inveterate dislike for corporal punishment, and has been described as the “head” without a cane. He was deeply loved by all his pupils, to whom he was an intimate and charming friend no less than a head master. He resigned the headship in 1914 on reaching the age of sixty-five, and worked as a curate in Bermondsey until he went to Oxford. He wrote many books, among which are “The New Revolution,” “Kallistratus,” “Boys and Masters,” and “The Thing that hath Been.”

MR. H. W. LIDDLE, the new head master of the Bedford Modern School, was educated at the Royal Grammar School, Newcastle-on-Tyne, and Downing College, Cambridge, where he graduated second class Hist. Tripos in 1909. He was successively a master at King Edward VI School, Aston, Birmingham, and King Edward VII School at Sheffield, teaching at both schools on the modern side. When the war broke out he was given a commission in the

ALDINE HOUSE, BEDFORD STREET, LONDON, W.C. 2.

16th Rifles, and was afterwards a prisoner of war in Germany. Returning to England in January, 1918, he became house master of Clifton Manor at St. Peter's School, York.

MR. DESMOND COKE, M.A. (Shrewsbury School and University College, Oxford), who has been appointed Vice-Master at Clayesmore School, Winchester, served during the war as Adjutant to the 10th Loyal North Lancashire Regiment. When invalided out of the army in 1917, he accepted a house mastership at Clayesmore. Captain Coke is a well-known novelist and writer of boys' books, one of his best known stories being "The Bending of a Twig," a tale of Shrewsbury School, of which at one time he was captain.

MR. SIDNEY WELLS has retired, under medical advice, from the position of Director-General of Technical Education in Egypt, which he has held for fifteen years. Mr. Wells was formerly Principal of the Battersea Polytechnic. During the war, in addition to his educational work, Mr. Wells acted as Director of Civilian Employment for the Egyptian Expeditionary Force. For his services he was mentioned in Lord Allenby's dispatches, and in 1919 was awarded the C.B.E.

MR. G. F. HOWELL has been appointed head master of King Edward VI Grammar School, Morpeth, in succession to Mr. G. D. Dakyns, who resigned last term, after twenty-six years' tenure of office. Mr. Howell is an old boy of St. Olave's Grammar School, and graduated with second class Classical Tripos from King's College, Cambridge, in 1911. He has been a popular classical master at Northampton School for many years.

MR. H. N. P. SLOMAN, head master of Tonbridge School

in succession to Mr. C. Lowry, was educated at Rugby School and Balliol College, Oxford, where he gained first class honours. After four years' experience in teaching at Radley College, he was appointed head master of the Sydney Grammar School, New South Wales, at the early age of twenty-eight. He returned to Rugby as head of the Modern Side and the Modern Sixth last year.

ONLOOKER.

CORRESPONDENCE.

SCHOLASTIC LECTURES.

To the Editors of The Journal of Education and School World.

SIRS,—I write on behalf of a body of teachers (of whom the late Prof. Churton Collins was once the leader and chief ornament) who have done valuable educational work, and are now threatened with extinction. I refer to the Lecturers at private schools for girls. Their vocation was an adaptation of the University Extension lectures to private schools, which were thus given the benefit of university instruction.

The Board of Education has decided that schools, where pupils do not pass certain specified examinations, *will not be "recognized"*; and, after three years, will not be allowed to have pupils over fourteen years of age. The result of this regulation will be that such schools will, in most cases, be obliged to close; in fact I believe some have actually closed already. Further, weekly lectures are to be treated as a luxury, and made to give way to concentrated tuition with examination aims.

What the Inspector's instructions are in this matter is clear. Though no fault whatever is found with the lectures "inspected," lady principals are told that "the lectures must be dropped." The result is that lecturers are being informed that their services are no longer required. I know of a case where a lecturer was lately dismissed from a school at which he had been lecturing for

(Continued on page 642)

INTELLIGENCE TESTS

GROUP TESTS OF INTELLIGENCE.

By PHILIP BOSWOOD BALLARD, M.A., D.Litt.

The author has not only described and criticized the numerous group tests in use in America, but has also given four complete sets of group tests of his own, which will enable a teacher to measure the intelligence of all the pupils in his class in about an hour and a half. These tests are simple to give and simple to mark.

"This book embodies the clearest and most practical presentation of the subject yet offered."
—*Times Educational Supplement*.

Numerous Illustrations. Cloth. 6s. net.

MENTAL TESTS.

By PHILIP BOSWOOD BALLARD, M.A., D.Litt.

The aim of this book is to make the teacher his own critic, and it incorporates Mr. Cyril Burt's revision of Binet's Tests, together with their detailed application to the subjects of the curriculum.

"Teachers should read this book, for it is uniquely offered to them by an inspector that they may the better be provided with weapons against himself."—*Times Educational Supplement*.

Third impression. Cloth. 6s. net.

TEST MATERIAL.

From "Group Tests of Intelligence."

"Picture Tests" from pages 91 and 93, reproduced 10 × 7, at 1s. 9d. per dozen sets.

"Chelsea Tests" from pages 117 to 128, in pamphlet form at 6d. each. In quantities 3s. per dozen net.

"Columbian Tests," pp. 104-111, in pamphlet form. Price 4d. each, 2s. 6d. per dozen.

"Crichton Tests," pp. 131-133, in pamphlet form. Price 2d. each, 1s. 6d. per dozen.

From "Mental Tests."

"One Minute Reading Test," at 1s. 6d. for 25 copies.

"Silent Reading Test" (with the Completion Test), at 2s. 6d. for 25 copies.

EVERYTHING EDUCATIONAL

FOR PUBLIC AND SECONDARY SCHOOLS.

STATIONERY, REQUISITES, FURNITURE.

EXERCISE BOOKS.

Superior Paper. Artistic Style.
Exceptional Value.

Price 36/- per gross.

Containing 80 pages; bound in stiff leatherette cover with artistic tinted label, which can be printed with name of School. The books are supplied in various rulings.

We hold a huge stock of Exercise Books in all qualities and prices, from 11/6 per gross, ready for immediate orders.

SCIENCE BOOKS AND BLOCKS. SCIENCE PAPERS.

We have a very large stock of Science Books, Blocks, Graph Books, and Papers ruled in Centimetre and Millimetre Squares, Centimetre and Two-millimetre Squares, Tenths and Half-inch Squares, Fifteenth and One-third-inch Squares.

WE CARRY THE LARGEST STOCK of all kinds of School Stationery, including Exercise Books and Paper, Drawing Books and Paper, Nature Note Books, Note Books, Examination Paper, Foolscap Paper, Book-Keeping Books, Brushwork and Colour Books, &c., so that customers' requirements can be **IMMEDIATELY SUPPLIED**

LOOSE LEAF DEVICES.

HOLBORN RING BOOK.

A stiff cloth cover with nickel-plated rings affixed to cover that open and close quite easily by pulling one ring apart to open, and snapping it together to close.

Covers only from 1/9 each.

Guides, per set of 5, 6d.

Paper to fit, 2/4 ream.

FILING CASES WITH CORDS.

A cloth case with two flanges inside eyeletted, with two holes through which cords are passed to hold several Exercise Books or loose leaf paper.

Covers only, from 1/2 each.

Guides, per set of 5, 6d.

Paper punched to fit, 2/4 ream.

FLAT FILES.

A strong Manilla cover with a flange inside containing two brass pins, paper with punched holes are placed on the pins and kept in place by a metal fastener.

Files, from 4½d. each.

A cheaper quality from 3½d. each.

PAPER.

Writing paper in various rulings. Drawing paper, Graph or Science paper kept in stock done up in Reams, Blocks, or in packets of 50. All with punched holes to fit the respective File.

TABLE DESK.

Showing Top "Sloping."

These Table Desks are made in Single and Dual lengths with:

(a) Locker Top (as illustration).

(b) Enclosed Bookshelf.

(c) Plain Hinged Top.

They can be used flat as a Table or raised to a sloping position for writing.

The edge nearest the pupil is always the same height.

Full details and prices on application.

Folding Desk No. 181, 16/6 each.

Do., fitted with folding Bookshelf underneath, 19/6 each.

"Esavian" Patent Sliding and Folding Partitions.

Science Laboratory Fittings.

more than twenty years. And lecturers who have been visiting Brighton, Eastbourne, and other provincial towns, now do so no longer. Thus, by a stroke of the official pen, their calling—in which they have invested the best of their time, toil, and money—is abolished, and themselves (many past middle age) cast adrift on the labour market.

If preparation for examinations were really more educational than lecturing, one would not have much right to complain; because the change would be for the general good. But is it? Before lecturing at private schools I had many years' experience of Army and Civil Service coaching work; and I was a master for several years at one of our great public schools; I say distinctly that the examination results furnish no test at all of good education. At our great public schools there are always some very clever boys; these are coached and exploited, and do wonders at the University; but the other 80 or 90 per cent. of the pupils are left to themselves, and most of them leave school exceedingly ignorant. I have had charge of boys (from the neglected 80 or 90 per cent.) from Eton, Harrow, Rugby, Winchester, Westminster, Marlborough, Cheltenham, &c., and, in the vast majority of cases, I have found the results the same—colossal, almost incredible ignorance.

Amongst girls in like manner, there will always be a few in a school who can pass the specified examinations; but their success is no test whatever of the educational efficiency of the rest of the pupils. The Board of Education does not interfere with our great public schools, but unfortunately it is doing its best to kill the private schools, on the principle, I suppose, that the State is capable of managing everything better than private enterprise.

I am, Yours truly,

August 24, 1922.

AVARY H. FORBES.

BOTANY GARDENS AT THE JAMES ALLEN'S GIRLS' SCHOOL.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—As the one responsible for the initiation and carrying on of the Botany Gardens of the James Allen's Girls' School, may I be allowed to call attention to a misconception in the "Occasional Notes" of the September issue of *The Journal of Education*?

It is stated, in a notice of the report of the Botany Gardens of the James Allen's Girls' School recently issued by the Board of Education, that "the Botany has certainly gained immensely from the school point of view from being taught continuously, but the hour a week for three years which is all that is given to the other sciences does not permit of the covering of much ground in these subjects."

The report on the Botany Gardens of the James Allen's Girls' School was written by me in 1915, but the publication by the Board of Education was deferred by reason of the war (see Prefatory Note). The science time-table given in the report was that of the year 1914-1915, but a note was added to page 46 that "since 1915 the work in chemistry has been substantially extended."

At the present time, of the Forms below the Sixth Form (the Post Matriculation Form) the two Fourth Forms have one hour and twenty minutes each a week for elementary chemistry and physics, and the Lower Fifth two hours for chemistry. In the Middle Fifth and Upper Fifth (Matriculation Form) all the girls who wish to take chemistry have two hours and forty minutes a week in each Form.

I am, sirs, yours faithfully,

LILIAN J. CLARKE, D.Sc., F.L.S.

James Allen's Girls' School,
East Dulwich Grove,

September 19, 1922.

We learn that in the Open Championship Contests held under the auspices of the National Shorthand Reporters' Association at New London, Connecticut, in America on August 24th, Mr. Nathan Behrin (using the Pitman system of shorthand) in the 200, 240, and 280 words a minute tests, each of five minutes' duration, attaining an average of 99½ per cent accuracy, was awarded the Association's Shorthand Championship Trophy.

BELL'S NEW BOOKS

Completion of Mr. Foster's Geometry

Elementary Plane and Solid Geometry.

By V. LE NEVE FOSTER, M.A., Eton College. Vol. III, *Solid Geometry*, now ready. 3s. 6d. Vols. I and II previously published. 3s. each.

[*Bell's Mathematical Series*: Editor, Professor W. P. MILNE, D.Sc. In Vol. III, as in the two previous volumes, the theoretical and practical aspects of the subject are developed *pari passu*. Ample practice is given in numerical work applied to simple and obvious figures in space, so that the pupil approaches the formal propositions with his mind well stocked with concrete examples of the figures and properties of Solid Geometry.]

Examples in Practical Mathematics

for Technical and Secondary Schools, Part I. By A. DAKIN, M.A., B.Sc., Head Master, Stretford Secondary School. 2s. 6d. [*Bell's Mathematical Series*.]

These exercises are, in the main, the examples of the author's *Practical Mathematics* (5s.). Sections on Mensuration and Logarithms have been added, and also Logarithm Tables, and a few other changes have been made.

Dr. Wilmore's New Book

A Geography of Great Britain and Ireland.

By A. WILMORE, D.Sc., F.G.S. With numerous illustrations and maps. Ready shortly.

[*Bell's Geographical Series*. Intended for students reading for School Certificate, Oxford and Cambridge Locals, and Matriculation Examinations, this book deals with Great Britain and Ireland regionally and shows how and why one part differs from another in structure, climate, agriculture, density of population, etc. The principles involved are illustrated by the study of clear, concrete examples.]

A New Series on entirely novel lines

The "Explorer" Geographies.

The first two volumes, which will be ready shortly, deal with: **THE AMERICAS.** By JAMES BRUCE, B.A. (Hons. Oxon.), B.Sc. (Lond.).

AFRICA AND AUSTRALASIA. By J. THOMAS, M.A., formerly H.M. Inspector of Schools.

This new series of readers is intended for young students over 11 years of age. The first part of each volume describes the discovery of the continent dealt with, considerable use being made of the writings of the original discoverers. The second part provides a broad general survey of the physical, economic, and political geography of the continent. The illustrations, which include a number of double-page plates, form an important feature of the books.

Scenes from British History. Part I,

From the Earliest Times to the end of the Middle Ages. By W. W. HENDERSON, M.A., Govan High School. Illustrated. 1s. 9d.

These simple and graphic descriptions of the domestic customs, social institutions, and ways of life of the British people in different epochs will, it is believed, provide a more ready approach to the history of our present political, social, economic, and religious tendencies than a bare summary.

A New Course for Evening Schools

Concise French Course.

Adapted for the use of British Students from the French of P. A. DESSAGNES, Professor of English at the Lycée Louis le Grand, Paris, by MARC CEPPI. Illustrated. 2s. 6d.

Intended to meet the needs of older students and for use in evening schools. The rate of progress is much more rapid than in ordinary school courses; essentials only are dealt with, and the exercises are on a novel plan.

The Analysis of English Sentences.

By F. R. WORTS, M.A., Senior English Master, Bristol Grammar School. 1s.

The clear and simple Model of Analysis set out in this book is intended to make Analysis neat, legible, and correct. In regard to Terminology the Recommendations of the Joint Committee (1911) have been adopted throughout.

Complete Text-Book Catalogue post free on request.

From EDWARD ARNOLD & CO'S List.

A NEW VOLUME IN "THE MODERN EDUCATOR'S LIBRARY."

AN INTRODUCTION TO THE PSYCHOLOGY OF EDUCATION.

By JAMES DREVER, M.A., D.Sc., Lecturer in Psychology in the University of Edinburgh. Author of "Instinct in Man," "The Psychology of Industry," &c. Price 6s. net.

Few words are more familiar to the plain man than the word psychology. What is this psychology which seems to be the novelist's bait, the journalist's magic formula, and the physician's new prescription for all sorts and conditions of men? Is it something wholly technical, increasingly associated with laboratories and consulting-rooms, part of the necessary equipment of the teacher and pastor, or is it something with which the plain man and the ordinary reader are likewise vitally concerned? This is the problem which guides Dr. Drever in his important contribution to the Modern Educator's Library.

THE MODERN EDUCATOR'S LIBRARY.

General Editor: Prof. A. A. Cock, Professor of Education in University College, Southampton.
Crown 8vo. Uniform cloth binding. 6s. net each.

THE MODERN EDUCATOR'S LIBRARY has been designed to give considered expositions of the best theory and practice in English education of to-day. It is planned to cover the principal problems of educational theory in general, of curriculum and organization, of some unexplored aspects of the history of education, and of special branches of applied education.

Education: Its Data and First Principles. By T. PERCY NUNN, M.A., D.Sc., Professor of Education in the University of London. Fifth impression.

"The appearance of Prof. Nunn's book is a real event in the history of English educational thought. It is in effect a new synthesis of current philosophical, psychological, and biological conceptions formed to elucidate the nature and problem of education. So far as I know the book has no parallel, and certainly no equal. . . . The result is a book which no 'advanced' student of education and no well informed schoolmaster can afford to neglect."—*Journal of Experimental Pedagogy*.

The Teaching of Modern Foreign Languages in School and University. By H. G. ATKINS, M.A., Professor of German in King's College, University of London, and H. L. HUTTON, M.A., Senior Modern Language Master at Merchant Taylors School.

"It is useful because it crystallizes the best opinions on many problems connected with modern language teaching. Its merits are such that it should be added at once to every teacher's library."—*The Journal of Education*.

The Child under Eight. By E. R. MURRAY, Vice-Principal of Maria Grey Training College, and HENRIETTA BROWN-SMITH, L.L.A., Lecturer in Education, Goldsmith's College, University of London. Fourth impression.

"This is a book for mothers, fathers, and teachers. It would not do aunts any harm. The present volume is a happy blend of principle, history, and method, and it is as full of delight as infant education itself ought to be."—*Daily News*.

Moral and Religious Education. By SOPHIE BRYANT, D.Sc., Litt.D., late Head Mistress of the North London Collegiate School for Girls. "The ripe wisdom which informs Mrs. Bryant's whole treatment of moral education, Bible teaching, and the presentation of essential religious truth, would be hard to match elsewhere. Mrs. Bryant's book is of great value at the present time."—*The Journal of Education*.

Organization and Curricula of Schools. By W. G. SLEIGHT, M.A., D.Lit. Second impression.

"A very important addition to Messrs. Arnold's admirable series. The book is both comprehensive and practical."—*Glasgow Herald*.

Other Volumes in preparation.

OUTLINES OF BRITISH HISTORY.

By G. BURRELL SMITH, M.A., Chief History Master at Repton School. With 22 Maps. Crown 8vo. Cloth, 6s. Also in Two Parts, divided at 1603, 3s. 6d. each. Separate Indexes and Time-charts.

Mr. G. Burrell Smith's earlier books, "Outlines of European History," 1789-1914, and "Scenes from European History," are already well known for their lucidity of style and their power of interesting young readers no less than for their thorough grasp of the essentials of the history of the periods which they cover. In this new volume the author traces with the same skill and mastery of his subject the growth and development of Britain from the earliest times down to the beginning of the Great War.

A NEW ANTHOLOGY OF VERSE FOR SCHOOLS.

MOUNT HELICON.

320 pages. Cloth, 2s. 6d.

This comprehensive collection of the greatest poetry from the sixteenth century onwards includes about 60 copyright works by such writers as Swinburne, Hardy, Newbolt, Kipling, Masfield, Drinkwater, and Brooke.

With introduction by Sir HENRY NEWBOLT, LL.D.

ENGLISH NARRATIVE POEMS.

184 pages. With Notes. Limp Cloth. 2s. 6d.

ENGLISH BALLADS and Short Narrative Poems.

192 pages. With Notes. 2s. 6d.

A Geometry for Schools. Edited by A. CLEMENT JONES, M.A., Ph.D., Senior Assistant Master at Bradford Grammar School. With Answers, 6s. 6d. Also in Three Parts, with Answers:

Part I. Geometrical Concepts, Postulates, Propositions 1-7, 2s.

Part II. Propositions 8-61, 2s. 6d.

Part III. Propositions 62-90, 2s. 6d.

A new book carrying out the scheme outlined in the Board of Education Circulars, Nos. 711 and 851, and covering the requirements of the various School Certificate Examinations.

Elementary Algebra. By C. O. TUCKEY, M.A., Assistant Master at Charterhouse. With or without Answers, 6s. 6d. Also in Two Parts, each with or without Answers, 3s. 6d.

Part I covers the work required for the School Certificate of the Oxford and Cambridge Examinations Board and Part II that for the Higher Certificate.

Heat. By W. J. R. CALVERT, M.A., Harrow School. Many Illustrations. Cloth. 6s. Just published.

Contains sufficient for the course in Heat taken at Secondary Schools, together with additional chapters for advanced Scholarship work.

Inorganic Chemistry: A Text-Book for Schools. By E. J. HOLMVAARD, B.A., Head of the Science Department, Clifton College. Crown 8vo., cloth. With 119 Diagrams, 10 Portraits, and Index. 6s. 6d. Just ready.

Inorganic Chemistry for Schools. By W. M. HOOTON, M.A., M.Sc., Chief Chemistry Master at Repton School. 416 pages. Ninth impression. Crown 8vo., cloth, 5s.

Elements of Natural Science (Part I). By the Rev. W. BERNARD SMITH, B.Sc., Assistant Master at Marlborough College. Part I, 5s. Part II, in the press.

Includes Mechanics, Chemistry, Heat, Light, and Sound, and with Part II will cover the General Science course of the Oxford and Cambridge School Leaving Certificate Examination.

ARNOLD'S SINGING-CLASS MUSIC.

A Series of entirely new Songs for Treble Voices, with Piano Accompaniment and Sol-fa, in addition to Staff Notation.

Under the General Editorship of THOMAS F. DUNHILL, Professor at the Royal College of Music.

All the Songs have been specially composed for this series.

JOHNSON, POETRY AND PROSE. Introduction and Notes by R. W. CHAPMAN. [Shortly.]

English Critical Essays of the XIXth Century.

Selected and edited with Notes by EDMUND D. JONES. 4s. net.

Wordsworth, Coleridge, Blake, Lamb, Shelley, Hazlitt, Keble, Newman, Carlyle, Leigh Hunt, Arnold, Ruskin, J. S. Mill, Bagehot, Pater, Emerson, and Lowell are represented.

A New History of Great Britain.

By R. B. MOWAT. From the Roman Conquest to the Outbreak of the Great War. Complete with 420 Illustrations and 9 Genealogical Tables. 10s. 6d. In Three Parts at 4s. 6d. each, and in several sections to cover periods set at various examinations. Full particulars on application.

The Golden Fleece.

An Introduction to the Industrial History of England. By G. W. MORRIS and L. S. WOOD. 3s. 6d.

An historical study and account of the woollen industry, written with reference to the industrial history of England. "To study the growth of a trade is to see the development of our national life from a new and more intimate point of view."

Ancient Rome. The Lives of Great Men.

Told by MARY AGNES HAMILTON. Brutus and Tarquin, Lucretia, Mucius, Cloelia, Regulus, Marcus Curtius, Coriolanus, Volumnia, Pyrrhus, Fabricius, Hamilear, Hannibal, Flaminius, Fabius, Marcellus, The Scipios, the Gracchi, Cato, Marius, Drusus, Sulla, Mithridates, Lucullus, Pompeius, Crassus, Cicero, Caesar. With Translated Passages by C. E. FREEMAN. With 53 Illustrations. 2s. 6d.

The illustrative extracts from Cato, Plutarch, Lucan, &c., are a feature of the book. Already published in the same series: *Saints and Heroes of the Western World*, by M. O. DAVIS.

Western Races and the World.

Essays arranged and edited by F. S. MARVIN. (The Unity Series, V.) 12s. 6d. net.

There are twelve lectures: Introductory: An Educational Problem, by F. S. MARVIN; Language as a Link, by J. A. SMITH; Greeks and Barbarians, by EDWYN BEVAN; The Roman Empire, by H. STUART JONES; The Influence of Christianity, by A. J. CARLYLE; The Humanitarianism of the Eighteenth Century and its Results, by S. H. SWINNY; Europe and Islam, by Sir T. W. ARNOLD; The Indian Problem, by C. H. ROBERTS; Western Races and the Far East, by W. E. SOOTHILL; The Economic Exploitation of the Tropics, by J. H. HARRIS; Master and Man in the Tropics, and Mandates under the League of Nations, by Sir SYDNEY OLIVIER.

The Clarendon Series of Greek and Latin Authors.

Partly in the original, partly in translation, to help pupils to understand as much as possible of the book they are reading. 3s. 6d. net each.

CAESAR'S GALLIC WAR, IV-V. Edited by R. W. LIVINGSTONE and C. E. FREEMAN. (3s. net.)

CAESAR'S GALLIC WAR, VI-VII. Edited by R. W. LIVINGSTONE and C. E. FREEMAN.

SALLUST, THE JUGURTHINE WAR. Edited by H. E. BUTLER.

THE CATILINARIAN CONSPIRACY. From Sallust and Cicero. Edited by H. E. BUTLER.

THE CLOUDS OF ARISTOPHANES. Edited by CYRIL BAILEY.

HERODOTUS, BOOK VII. Edited by C. E. ROBINSON and others.

AESCHYLUS, PERSAE. Edited by M. R. RIDLEY.

EURIPIDES, MEDEA. Notes and Introduction by F. L. LUCAS.

VIRGIL AENEID, BOOKS I-III. Edited by CYRIL BAILEY and C. E. FREEMAN.

Already published in this series: MILTON, POETRY AND PROSE, BURKE SELECTIONS, WORDSWORTH, POETRY AND PROSE, ESSAYS ON GOLDSMITH.

History as a School of Citizenship.

By HELEN M. MADELEY. With a Foreword by the Master of Balliol and 15 Illustrations. 4s. 6d. net.

Part I. Ends, deals with the need for reconstruction, the making of citizenship, and the curriculum. Part II. Means, gives practical hints on instructing classes of all ages. The last chapters contain details of practical work, model lessons, &c.

A Geography of the British Isles.

By A. R. LAWS and P. LANCE. With 107 Illustrations. 3s. 6d.

Physical and Political School Atlas.

By J. G. BARTHOLOMEW. Third edition, revised and edited by J. BARTHOLOMEW. With 32 pages of coloured Maps, and 16 pages of black and white Maps, Diagrams, Letterpress, and Index. Limp Cloth, 2s. 6d.

Poèmes à Lire et à Dire, 1820—1870 :

Suivis d'Extraits. Autobiographiques des Poètes.

Edited by H. L. HUTTON. 2s. 3d.
Oxford Junior French Series.

Spanish Literature.

A Primer by JAMES FITZMAURICE-KELLY. 3s. 6d. net.

Contents: Spanish Literature before 1300. The Middle Ages. The Passing of the Middle Ages. The Middle Renaissance. The Late Renaissance. The Golden Age. The Age of Calderon. The Eighteenth Century. The Romantic Movement. The End of Romanticism. The American War. From 1898 till 1921. Index.

Junior Botany.

By T. W. WOODHEAD. With 140 Illustrations. 3s. 6d.

"Since the publication of *The Study of Plants*, frequent requests have been made for an abridged and simplified edition which should serve as an introduction to the study of the life-work of common flowering plants, suitable for a junior course. It is with that aim that the present volume has been prepared."

The Second Book of Great Musicians.

By PERCY A. SCHOLES, including simple accounts of Schubert, Mendelssohn, the earliest operas, Debussy and the Orchestra. Gift Book Edition, 5s. net; cloth, 4s. 6d.

OXFORD UNIVERSITY PRESS

HUMPHREY MILFORD

LONDON, E.C. 4

University Correspondence College

FOUNDED 1887.

Principal: WILLIAM BRIGGS, LL.D., D.C.L.,

SUPPLEMENTARY AIDS TO CLASSROOM WORK.

X.

MUSIC.

BY ETHEL HOME,

Head Mistress of the Kensington High School, G.P.D.S.T.

A SPEAKER at one of the recent educational meetings said that "the knell has sounded of classroom teaching." In olden days a reproach often levelled at the teacher was that he did not "teach" enough. He is now told that he "teaches" too much, and that the class lesson should be regarded chiefly as an opportunity for learning the minimum technique of the subject necessary in order for the pupil to work alone; in other words, that the lesson given in class should aim at teaching how to handle tools. It is admitted that it must also provide the necessary stimulus for good work, but the teacher is urged to train his pupil not to rely on his master's supervision at every step of his progress; he is to try to find out, by degrees, his own mistakes, and must exercise his own powers on his own behalf.

The newer methods are clearly visible in the present tendency of musical teaching in schools. During the last hundred years the music master has slowly, but surely, been changing his status. He began by being tolerated as the arbiter on the rules of technique of his instrument, which was generally the piano. He was then asked to supplement his teaching by giving lessons in harmony to the more musical pupils. Then—sad day for the sensitive, retiring artist—he was expected to teach class singing to large sets of fidgety, active young people, who were not in the least interested in the lesson, who were delighted to find that their master did not even know their names, and who therefore regarded the song class as a

heaven-sent opportunity for getting through a vast amount of private correspondence, which was answered by the recipients on the spot.

The voice of the reformer was then heard in the land. Giants of the calibre of John Farmer declared that our ideals in music teaching were all wrong. He said that the instrumental work should be organized on different lines, that folk and classical music should be the foundation of the instruction, that it was necessary to distinguish between a piece suitable for study and that destined for performance, that short lyrical pieces should supplement the severer type of work. Above all, he insisted that good unison songs of the national type should form the larger part of the *répertoire* of the song class. Children had a right to their national inheritance, and the plaintive ditty written by the village organist must give way to "Rule, Britannia" and "Come Lassies and Lads."

These healthy breezes brought a fresh life into the jaded musical atmosphere of schools. New vigour was infused into the teaching of music, and the schools fortunate enough to secure competent teachers in sympathy with these ideas soon produced an interesting crop of results. The number of boys and girls who "liked music" was noticeably greater than before. When such pupils grew up they joined choral societies, they attended classical popular concerts, they took part in the discussions on the heretic Wagner, they had "their views" on Brahms.

But another reform was in the air. A persistent voice was heard—it murmured in corners—it threw out vague hints in articles—and at last it proclaimed its message in the market-place. "Music is a *language*. Why is it not taught as such?"

"Explain yourselves!" said the teachers. "We teach songs to all our pupils. As for the instrumental side of music, it is an accomplishment, nothing more! Many of the pupils who learn to play are not gifted, and the majority drop their instrument on leaving school. Music does not rank as a language, and cannot be taught as such."

The prophets begged their opponents to consider the function of all art in the world. "Does not life," said they, "depend on the expression of ourselves in relation to the community? Is not self-expression a universal instinct, a force that cannot be suppressed without grave danger? And is it not true that all Force, when deprived of a natural outlet, breaks down the barriers sooner or later and revenges itself on the community? Finally, is not art as much the language of the artist as words that of the ordinary man?"

"True," said the perplexed teachers, "we quite see that the gifted musician must be allowed to express his thoughts in terms of music. But the average child is not gifted in this direction. How can he be taught a language which is not his natural means of expression?"

"Are you sure that some degree of expression by means of music is not natural to human beings?" retorted the prophets. "Savages have their battle-cries and their tom-toms. Have you ever listened to a baby crooning to itself? Do boys never whistle tunes in the streets? Do not soldiers march better when a band goes with them? Does not music enter into countless social activities?"

"If so, music says something of importance which cannot be said in other ways, and is necessary to the human race; it therefore ranks as a language, and should be taught as such."

"We do not mean that every pupil is going to be a composer of note, any more than we expect him, as a matter of course, to become an historian, a scientist, or even a traveller. Yet you teach him history, science, and French, and these are compulsory subjects in a good general education. Why is music not treated in the same way?"

"But," said the harried teachers, "music will have to produce such different results if it is to count as equal in importance to other subjects. We shall have to alter all our schemes of work. Is it worth it? Think of the number of pupils who dislike learning music!"

"Exactly!" answered the prophets, "and that is what we now want to talk about. Why are children taught to speak, write, read, and understand their mother tongue, and yet they can only sing or play set pieces of music? Is it impossible for the average child to sing and play *at sight*? Many boys and girls would far rather do this fluently on leaving school than be able to perform a certain number of well practised pieces. Again, is the *dictation* of musical phrases more difficult to cope with than that of sentences in the mother tongue? Think how nice it would be if we could all jot down the chief themes in the music we hear performed! And is it asking too much to expect some intelligent *understanding* of music when we hear it? Sonatas have plots, which are quite as interesting as those of novels. And lastly, is it really impossible," and the voice dropped to an ironic whisper, "is it quite out of the question for children to *improvise melodies*? They improvise sentences in their mother tongue, and in French or Latin, can they not be encouraged to do so in music?"

For a long time the prophets were frowned down. Scorn was poured on the phrase "Music as a language." The fallacy was repeated again and again that an understanding of art is a gift of the few, not an instinct of the many. The music teachers declared that, provided children play good music, sing good songs, and take a moderate interest in going to an occasional concert, it is as much as can be expected.

But the prophets would not be silenced. They began their experiments, aided by a manifesto from the Board of Education. They produced their results. It is now an accepted fact that the foundations of a real understanding of, and appreciation of music as a language can be laid in the classroom.

What remains to be done? Can the most ardent seer foretell further developments?

In the opinion of some enthusiasts, much can still be done to afford great opportunities for the musical development of the child. In the ear training class the pupil is taught to sing at sight, to write melodies down from dictation, to provide simple harmonies for melodies, to transpose short pieces, with easy harmonies, on the piano, and to improvise tunes on his own account. In the song class he is gaining an acquaintance with the musical knowledge of the past, and some idea of how to judge the music of the present and the future. But if music is to take its place as equal in importance to other subjects in the school curriculum—and this is the audacious claim made on its behalf by the prophets—we must see that it holds its own as regards *out-of-school activities*.

Let us take a look at the school notice-boards. We see the dates posted up of the meetings of the debating society, the reading society, the sketch club, &c. We hear of competitions being organized in connexion with the school magazine, and with various outside periodicals and societies. We notice that parties of pupils are taken regularly to performances of English, French, Latin, and Greek plays. We see programmes of recitations and plays passed from hand to hand, and we gather that something is being "got up" for the breaking-up party.

In other words, there is evidently a brisk under-current supplementing the treatment of other subjects in the classroom. What can we do for the music? What "Supplementary Aids to Classroom Work" can be found for the latest recruit to the army of subjects necessary to the mental outfit of the child?

Some ardent reformers may wish to limit their interest to what have been unkindly nicknamed "boxes of toys." But more can be done, even for the youthful pupils for whom such apparatus was destined by the constructors.

(i) The so-called classes of musical appreciation, when taken by trained, enthusiastic teachers, are most useful for getting pupils to think of compositions as a whole, as well as for fixing their attention on special points of interest. As the pupil gets more and more alert, the teacher tells him some of the secrets

of the construction of a good piece of music. Thus the work done in the ear training class is supplemented by more detailed knowledge.

- (ii) Kindergarten bands and classes of Dalcroze rhythmic gymnastics are admirable for inculcating a feeling for rhythm, as apart from melody. Every school should have an orchestra, which performs regularly at school functions. Again, old English folk dances are a perpetual joy.
- (iii) Parties of pupils should be taken to local concerts. In small country towns, where there may not always be opportunities of the sort, a concert should be given, at least every other year, by good artists. A small subscription from each pupil and a contribution from the school will cover expenses.
- (iv) The above can be supplemented by the use of piano players, gramophones, &c., and a real knowledge of the literature of the classics can thus be given. By means of the repetition possible of the same piece, the attention of the pupils can be focussed on the general structure, melodic services, value of inner parts, key changes, rhythmic points of interest, &c. Care should be taken to hear these instruments before buying them, as they vary greatly, and price is often no indication of their value.
- (v) Copies of musical magazines should be provided from time to time and hung up on the school notice-boards. Many an enthusiasm has been started by reading a chance article on a by-path in music, such as the art of bell ringing, the experiments of Pythagoras, the pentatonic scale, &c.
- (vi) Good books on music should be placed in the school library. It is surprising to find that many school libraries, excellent in other respects, contain absolutely no books on music!
- (vii) A music club can be a great stimulus to the general musical work. A short popular talk begins the proceedings. The subjects treated can range from the lives of the great composers to folk music of all nations. The essential is that pupils shall themselves be responsible for part of the programme, either by playing or singing specimens of the music dealt with, or by performing original compositions.
- (viii) The help of the more musical pupils should be asked in providing incidental music to school plays, &c., in accompanying songs, in forming a choir to lead the singing at prayers, and so on.
- (ix) We should also insist on frequent exhibitions of musical work done by the pupils. No school should rest content with a concert given only once a year. Instrumental playing should be shown every term. Insist that the pieces played shall be short, discourage repetitions, and stoutly refuse to allow the gifted pupils to play more than once in the same concert. The programme is arranged for the double purpose of encouraging the average pupil, and of showing some of the work done to the school as a whole and to outside friends.

The ear training results should also be shown at regular intervals. In some schools, where the "House system" is encouraged, this work can form the basis of interesting competitions.

Again, it should be remembered that pupils often form their opinion of the value of a subject taught in school from the atmosphere created for that subject by the general members of the staff. Thus the Classical, Mathematical, Science, History, and English specialists should all be urged to take interest in, and, if possible, part in the musical activities of the school. Many of them love music, and are only deterred from showing their interest by a feeling that it is not "their job." They fear the derision of the music staff. But even if they cannot give active help, get some of them to make a point of being present at the school musical functions. After a time the English master may offer to judge the literary worth of a composition written

on music. The Classical master will be inspired to offer a short talk on Greek music. The Science master, with a little persuasion, will give a popular demonstration of the wonders of acoustics. Impress on him the necessity of using simple, untechnical language for the sake of the unscientific. The History master can give a sketch of the life and customs of the people during the great English period of Byrd, Tallis, and Tye. He ought to know what was meant by the Chapels Royal, and that Henry VIII was a connoisseur, not only of ladies, but of good tunes. Queen Bess, too, was not only a great political force; she was the inspirer of many a lovely piece of music which exercised an unconscious influence on all who heard it.

Finally, a word to the head of the school. He may declare that he has not a free hand in the matter, that he is at the mercy of the Board of Education, of his governing body, of insistent parents who write letters to *The Times*. But the fact remains that he is the real arbiter of the fate of many a subject in the school curriculum. Even if he himself is not a musician, nor even vaguely stirred by a good tune, he knows that his pupils are sent to him to be prepared for the life they will lead on leaving school, and at the bottom of his heart he has a suspicion that the artist may, after all, have a message to the world of some importance, even if, in his opinion, it is less valuable than that of the scientist, the politician, and the man of commerce.

The world does not live by bread alone, and the thoughts and aspirations of humanity are expressed, not only in laws and treaties, but in art.

Hence the head of the school dare not stand aside from the movement which is urging a revision of some of the methods of teaching music, which sufficed for a bygone age, but are hopelessly inadequate in these days of international thought and socialistic ideals. He realizes that art is international, and that the keynote of socialism is communal work. Thus, if to the classroom teaching of music on modern lines he adds some of the supplementary activities suggested above, he will at any rate have given his pupils the opportunity of increasing their resources for understanding and benefiting from music, which is not only one of the interests which draws together all classes of the community, but is one of the forces which binds nation to nation and man to man.

EDUCATION AT THE BRITISH ASSOCIATION.

UNDER the presidency of Sir Richard Gregory, the Education Section of the British Association celebrated its majority at Hull from September 6 to 13. Whilst many sessions were well attended—especially the joint meetings with other sections—it is again disappointing to record the poor attendance of secondary school teachers. A review of the subjects considered and the speakers announced makes this all the more surprising. Although other sections attract the specialist science teachers, yet Section L affords just the opportunities asked for again and again by the advocates of humanistic teaching for the discussion of educational school practice. Those who merely read cold press accounts miss those exhilarating and never forgotten moments in which one is carried away by the inspiring eloquence of a real teacher.

In his address, which is reported more fully in another column, the president dealt ably with both educational and school science and made a stirring appeal for such modifications in existing practice as would ensure that the average boy and girl should obtain a real knowledge of the nature of everyday phenomena and applications of science. Referring to educational science generally, Sir Richard said that much more was involved than the methods of teaching or the theory of the curriculum. Conditions of physical, mental, and more health, and the determination of the most effective factors of growth at every stage of development, are all important. Teachers,

like engineers and medical practitioners, expect science to provide things which are directly useful, whereas their duty is to discover possibilities in results achieved. Modern science differs greatly from what was known to the Greeks, and if Plato were now constructing an educational system, he would no doubt readjust its position in its curriculum. Whether we consider the practical education or training by which uncivilized man learns to supply his needs, the humanistic conceptions of ancient Greece, medieval education, or modern systems, the aim is the same, namely, to create worthy members of particular social fabrics—to adapt people to meet the necessities of life and respond to the best influences of existing circumstances. The resources available for the instruction and guidance of the child comprise the wisdom and experience of the past as well as the power of the future. Science has transformed the whole landscape entrusted to it, and the realm of its productivity is continually expanding. It is a kingdom potent with possibilities for good or evil, and to let any of our children grow up unfamiliar with their entailed possession is to neglect an obvious duty.

In the discussion which followed, Prof. Smithell's statement that the University specialist of science was the last man who ought to have any influence upon the methods and courses to be adopted in the teaching of young children was much appreciated. He said we had been taught to endure a large number of subjects rather than to love them. The gain in improved method in science teaching had been balanced by the loss of human and educational influence in the limitation of its scope. Dr. Griffiths referred to his experience as an examiner in school examinations, and to the impossibility of setting questions on the present syllabuses which would suit the interest of the child and show its real capability. He had, however, noted extraordinary progress in the case of pupils who did not want to train for any examination.

Mr. R. C. Moore followed with a paper on Advanced Instruction in Elementary Schools. He described the various methods of organizing such instruction, and emphasized the necessary co-ordination with the work of the secondary and technical school in order to allow of the economic migration of pupils.

Bishop Welldon, chairman of the Committee upon Training in Citizenship, presented the third report of the Committee. This showed the useful work which had been done, with the help of education authorities, in distributing the earlier reports. The report, which can be obtained from the Secretary (Burlington House), price 6d., also contains a bibliography of Civics which should be of inestimable service to teachers. Mr. H. Richardson (Newcastle) said that some day or other this committee might wish to extend its activities to the British Empire, and later on, perhaps, it might become still more international and co-operate with the League of Nations.

In the afternoon of the same day the Rt. Hon. Lord Meston gave an address on Imperial Citizenship which can only be regarded as a memorable deliverance in regard to the destinies of India. He appealed to the British public to feel its responsibility in regard to India, and to assist in the advancement of India towards a real and not a merely ceremonial partnership in the Imperial Federation. He dealt with Imperial Citizenship as an emotion, an ideal, and a status. Imperial citizenship, as a status of universal and uniform validity throughout the Empire, did not exist. Its sphere was subject to large reservations, geographical and ethnical. The concrete fact was that there were certain white communities in the Empire which would not permit members of other, or coloured, communities to live alongside them on terms of civic equality. Unless we could find some means of handling the demand for a common standard, the result would be increasing embarrassment in our task of Imperial unity. The qualifications for full imperial citizenship were (1) the attainment of a similar type of constitution; (2) submission to a uniform system of administration;

and (3) the acceptance of a common code of jurisprudence. If those were the full qualifications, it was clear that some of the members of our great Imperial federation had a long way to travel before they could possibly acquire them; India's commanding position in our commerce and foreign policy raised the question of its status into the first rank of importance.

Councillor T. McLeod (Sheriff of Hull) followed with an address dealing with Imperial Citizenship from the point of view of business and the Colonies.

An interim report of particular interest to teachers on the Teaching of Geography was presented by Mr. C. E. Browne. In this the scope of the subject was limited to the surface of the earth within the limits of the hydrosphere, this being defined as the region in which water in its various forms occurred. Exception to this limitation was voiced in the discussion, and the inclusion of astronomy advocated. Many other important points were also made. Geography should be the connecting link in science teaching; it is better to give the young child a mental picture rather than an explanation of which it can have no mental conception. No better method has evolved than that in which the terrestrial and celestial globes are used throughout. Facts are sure, explanations change—the Gulf Stream and monsoons afford excellent examples of this.

A most enjoyable, popular, and all too short joint session with Section J was devoted to Psycho-analysis and the School, papers being presented by Dr. C. W. Kimmins, Dr. Crichton Miller, Dr. E. A. Hamilton-Pearson, and Dr. R. G. Gordon, respectively, and wonderful possibilities concerning the introduction of psycho-analysis into the educational training of the child were held out. Dr. C. W. Kimmins said psychology, after long being regarded as having little relation to education, was now looked upon with such extraordinary favour that it was becoming positively embarrassing. This wave of enthusiasm for the subject was producing extravagant hopes in the way of educational methods which might not be realised, and might do harm to that progress in the education of the child which they all desired. He referred to the important part played by the sub-conscience in human behaviour, the knowledge of which must of necessity profoundly modify the schemes of the educator in the future, and in this direction we must look primarily to the psychologists for guidance, and to the valuable advantage possessed by teachers who had knowledge of their own personal equation. Dr. Kimmins, however, naively admitted that it was impossible to impose an examination upon teachers.

Dr. Crichton Miller, director of the Tavistock Psycho-analytical Clinic for teachers in London, gave much excellent advice and some plain speaking to members of the teaching profession in a most enjoyable speech. He preferred the term analytical psychology to that of psycho-analysis. He humorously illustrated the development in educational methods by pointing out that at one time a knowledge of Latin was regarded as sufficient preparation for teaching John Latin. Later it was realised that it was necessary to know John. Now it was universally admitted that the teacher must possess knowledge of Latin, John, and himself. He advocated analytical psychology for teachers, and said that a teacher whose mental sight was so astigmatic that he would never see the souls of the children, needed to be transformed and made efficient by analytical methods. Teachers should recognize their own childishness. They would never expect a Peter Pan schoolmaster to lead his pupils anywhere except to the never-never land. Analysis, however, was not a thing to be undertaken lightly, for much harm might be done if the process was not continued to a proper conclusion. (Most teachers will agree as to this on realising that a complete analysis may necessitate attendance for one hour on five days a week for eighteen months.)

Dr. E. A. Hamilton Pearson emphasized the value of co-operation between the teacher and the analyst, and

gave many interesting instances where this had led to good results. Broadly speaking, he said, delinquency in some shape or form was a very constant symptom of mental conflict.

Dr. Gordon advocated the removal of children of vicious tendencies from their surroundings, for if left in their environment in course of time they would become either neurotic, or addicted to drug taking and possibly crime. He recommended the imposition of tests, and paid a great tribute to the work being done in the Ohio Bureau of Juvenile Research. Referring to the importance of the proper selection of workers for clinics, he pointed out that psycho-analysis had become a very restricted and special field in psychological investigation, and many people calling themselves psycho-analysts had not the slightest knowledge of physiology, biology, or even psychology, without which so-called psycho-analysis was not only meaningless rubbish, but pernicious rubbish.

In opening the discussion, Prof. T. H. Pear pointed out that outstanding successes in psycho-analysis had been obtained in dealing with inefficient personalities. These cases could hardly be made worse. He looked for some definite indication as to whether it was desirable or practical to apply psycho-analysis to any but the inefficient, and whether a healthy sentiment such as love could be analysed in the same sense as is possible with a complex.

At the Monday (September 11) Morning Session, Mr. Ivion S. Macadam, President of the National Union of Students, read a paper on "Some Recent Developments of National and International Student Organization, with special reference to the work of a Students' International Bureau." International conferences of students have been held since 1842, but the first move of real promise was the organization in 1919 of an International Confederation of Students of a truly representative character. This confederation was started by the French National Union of Students, at a Congress held in Strasburg. The movement at first hung fire, and at its General Congress in Prague last year nearly broke down, through the mutual suspicion and distrust of the European nations. It was saved by the promise of the English Students, of whom about 100 attended the Congress, to form a National Union and join the Confederation. Such a National Union was formed in February of this year, and now includes all the Universities of England and Wales. It is a federation of the University Unions or Student Councils, numbers over 60,000 members, and has a Central office in London, which maintains the practical co-operation of English students with those in other countries, and carries on a large variety of services for the Universities and Colleges. Mr. Macadam thus gave an interesting account of the work and position of the Union.

On the same day three papers were given on "English as the Basis of National Education." Mr. Pocock, whose excellent work at Dartmouth so largely influenced the Report of the Departmental Committee on English, dealt specially with the teaching of English in Public Schools, and said school masters had to find out whether English could become the natural and sufficient basis of all education in England. If this were so, and many of them were convinced that it was, they ought to pool resources and enthusiasm, though without producing a stereotyped scheme. It was essential to break down barriers between schools, and bulkheads between subjects in each school. If English were to be the basis of all education, it must be taught scientifically as well as artistically. The basis of the scientific treatment was not grammar and analysis, but accurate observation and exact thought. The basis of the artistic treatment was self-expression, which could be trained through English literature by original composition, both oral and written, and above all, through the drama.

The president pointed out that English in the schools at present might mean anything. One did not object to this, provided that they could give some coherence to it

and use the language as the classical languages had been used. They wanted more serious attention given to the English group, instead of instruction being concentrated on grammatical niceties and small points of no consequence. It was possible to be a successful writer of English for popular consumption, and yet break all the rules which were taught at school.

Prof. Edith Morley (Reading) reviewed the report of the Departmental Committee, and while paying tribute to its excellence in general, subjected it to some minor criticisms with respect to its treatment of the problem as affecting university honours students. In endeavouring to hold the balance between literature and language the compromise suggested did not appeal to the experienced university teacher. It is not possible for honours students to begin the study of either language or literature with Chaucer, if they are to pursue their investigation by genuine university methods.

Mr. J. H. Fowler (Clifton), who was a member of the Departmental Committee, defended the Report against the criticism of Dr. Morley. He stated that knowledge of classics and language should not be confused with familiarity. The English essay in the old days was too often an effort in self-suppression. The writer was taught to cover his own ignorance of a subject by a cloud of words. It was a great achievement in English teaching of the last twenty to twenty-five years that the essay had now become a training in self-expression.

Papers of considerable local interest on the movement towards individual work were read by Miss F. Sayer and Miss C. T. Cumberbirch (Principal of the Training College, Hull). Miss Sayer gave a clear account of the various experiments in individual work carried on in the infants' schools in Hull, with special reference to the good results obtained and the limitations imposed by the absence of individual methods in the junior schools to which the infants were transferred. Miss Cumberbirch gave a critical exposition on the recent tendency towards group and individual work in upper classes in elementary and secondary schools and in training colleges. Her paper will be dealt with specially in our November issue.

The meeting concluded with a joint discussion with the mathematical section on the effect of Reformed Methods in teaching Mathematics. Prof. T. P. Nunn, Principal of the London Day Training College, dealt with the Principles of Formal Geometry. In his customary manner Prof. Nunn carried his audience away completely. A delivery far too rapid for most speakers was balanced by clearness of diction, simplicity of language, forcefulness of argument, and absence of repetition. He expressed the view that the reformed methods, where applied with understanding, were producing excellent results, and that it is now necessary to bring the formal stage into line with the earlier stage in which geometry naturally falls into line with the study of scientific facts. He advocated in a convincing manner, with simple illustrations, the advantage to be obtained by adopting the assumption that space admits of similar figures, leaving the properties of parallel lines to be deduced therefrom instead of deducing the existence and properties of similar figures from the postulate of parallel lines.

Mr. Fawdrey (Clifton) gave a comprehensive account of the history of the revolt against Euclid and the practical results of the reform, and Prof. M. J. M. Hill forwarded a paper suggesting the value of Euclid's Book V to university students commencing the serious study of the calculus, provided that the idea of proportion be introduced from first principles.

SUMMER SCHOOL OF SPANISH.—The third annual summer school of Spanish, organized by the University of Liverpool, was held in Liverpool and Santander, from July 27 to September 13. About a hundred members were enrolled, and twenty-five, the number for whom accommodation could be obtained, spent the last month of the course at Santander.

UNIVERSITIES AND SCHOOLS.

ENGLAND.

In consequence of the death of Sir Albert Rollit, and of the resignation of Dr. M. O. Forster, who has accepted an important scientific appointment in India, two vacancies have arisen in the Senate, the first in Arts and the second in Science. Another vacancy in Science has been caused by the election of Dr. Walmsley as Chairman of Convocation, in which capacity he is *ex officio* a member of the Senate. A contest is promised in each Faculty, the result of which, to be declared at the meeting of Convocation on October 10, will be awaited with interest. It is understood that Dr. Scott Lidgett, well known for his services as a member of the defunct London School Board and of the L.C.C. Education Committee, and Miss Agnes Paul, late head mistress of Clapham High School, are standing for election in Arts. For the two seats in Science, five candidates are taking the field—Dr. J. S. Bridges, Director of Education, Willesden; Mr. C. W. Crook, Head Master, Central Secondary School, Wood Green; Mr. T. Ll. Humberstone, for eighteen years a secretary in the University and previously a secondary school teacher; Dr. George Senter, Principal of Birkbeck College; and Dr. Jessie White, of the Auto-Education Institute.

The English Review for September contains an interesting article by Mr. T. Ll. Humberstone, entitled "The New University of London," which demonstrates the long and honourable educational traditions of London and examines the question why a university was not established in London in medieval times. The author favours a re-incarnation of the University on the Bloomsbury site offered by the Government, and quotes with approval Mr. Fisher's eloquent forecast of the destiny of the University as one of the "High Schools of the World."

SCOTLAND.

The annual meeting of the Institute, held in Edinburgh on the third Saturday of September, did not leave a very pleasant impression on one's mind. There was evidence of a year of great activity as measured by meetings and conferences, but with that there was the feeling of sections working at cross purposes and little tangible result to show for all the activity. The situation might have been lightened by a strong presidential address, but the retiring president, who has set up a not very satisfactory record by giving only one single address of any consequence during his year of office, departed from the usual practice of summing up the year's work before demitting office. It is to be hoped that the precedent will not be followed. It is true that the delegates' survey of the year's business in the course of a single day is an arduous undertaking that leaves little time for ceremonial of any kind, but in the past the retiring president's address has been found to help in giving the teachers themselves clearer views about the problems of the time and in presenting the case of the profession to the public. The more difficulty there is in getting through the business in a day, the more valuable is the leading from the chair.

The need for some other method than having a year's business reviewed in a day, which is the method prescribed by the Charter of the Institute, found frequent expression in the conversation of delegates. But though the difficulty has been acute since the year of union increased the membership and business of the Institute, no one seems prepared with a solution. The problem is really part of the larger problem of organization, with which an important committee has been busy for some months. The complaint made is that the same matters are dealt with in succession by committee, executive, and council, and in consequence of all the talking this involves the business of the Institute is in chronic arrears, and points of urgency of vital moment to the profession, such as have arisen again and again in the past session, are not dealt with till too late. One proposal, which has been under special consideration for a long time past, is that associated with the name of Mr. Hugh B. Guthrie, for a reorganization of the Institute on trade union lines. The idea is that the present big council should disappear, and a small executive, elected by some score

of electoral districts, acting on instructions from their constituents and regularly reporting back to them, would combine the functions of the present executive and council. In point of fact it is only the forceful personality of Mr. Guthrie that has kept this scheme alive through a year of discussion. There are two insuperable objections. The one is that the secondary teachers cling jealously to the number of representatives on the council guaranteed to them at the time of union, and are not likely, just now of all times, to consent to a scheme that seriously diminishes their voting power on matters that specially concern their section. The other is that even in the unlikely event of the secondary teachers agreeing to waive their guaranteed rights the amount of work which the business of the Institute would throw on the small executive council, combined with the constant reporting back to the members, would be so burdensome that busy teachers simply could not undertake the duties of office. It is an illustration of the cumbrous character of the present procedure, by the way, that this proposal was first brought up two years ago, and is to be carried forward into another year, in spite of the fact that most people realize the weakness of the trade union analogy on which it is based.

It was clear from many happenings in the course of the Annual Meeting that the economy in salaries and superannuation is having a demoralizing effect on a considerable body of teachers.

Not in living memory has there been such an ugly and unhappy temper among members of the profession. It is not merely the natural resentment that any body of workers experiences when wage or salary is threatened. That soon passes away when the reduction is an accomplished fact. It is rather the hurt to self-respect that leaves a long bitterness behind. Not only have teachers had to face an indefinite postponement of the educational ideals in which they were encouraged to believe by the leaders of national thought, and to see the chances of building up a better school system and a finer profession vanish into thin air, but the economy in education, which took for them the form of lower salaries and work under less satisfactory conditions, has been accompanied by a chorus of depreciation in which all sorts of people from clergy to business men have joined. This must be remembered to understand the motion passed at the last meeting of Council and confirmed by the Annual Meeting, that "in view of the unsatisfactory and illiberal attitude of the Government towards education and educators, and the strong trend in educational authorities towards a reduction of salary scales, the E.I.S. issue a warning to parents and young people against entering upon teaching as a profession." It is rather deplorable that such a warning should be needed, even if, as ex-president MacGillivray pointed out, the medical profession had recently adopted a similar attitude to a certain class of appointments. Men and women must be very sick of their position when they come into public with a gesture of self-depreciation like this. The economists would do well to ask themselves what kind of service they can expect from people in whom they have produced this spirit. And if the risks of social instability consequent on the subconscious but constant effects of bitterness in their teachers on the minds of the children do not appal them, the certainty that it means fewer teachers and possibly inferior teachers at no distant date should.

Another side-result of the salary reductions which may have most serious consequences is an intensification of sectional antagonisms among Scottish teachers. The institution of the Minimum National Scales led to a considerable amount of bickering in the profession. The great mass of non-graduates on the one hand rose up in protest against being left to the tender mercies of the authorities with a mere recommendation to a salary equal to that of their graduate brethren. The secondary teachers, on the other hand, contended with good reason that relatively to the ordinary scales, their scales did not give them the remuneration to which their longer training and higher qualifications entitled them. On the one side this led to the formation of a Primary Teachers' Association, which for a time exercised considerable influence through its great voting power; on the other, to threats of a break-off and the reformation of a Secondary Association which in one or two centres led to small secessions. These opposite agitations had only begun to die down when the salary reductions revived them in a more awkward form than ever. If there was to be a cut of some particular sum—so many thousands over all, as most of the authorities have agreed—it had to be done with the consent of the teachers. This meant that the Institute had in most cases some responsibility for the scheme of reductions. The

Economy and the Teachers' Morale.

fact that the Minimum National Scale was legally binding, and that the major part of the reduction must be effected on the increases of salary above the scales in many cases, forced on the teachers the unpleasant choice between a reduction at the expense of the non-graduates or at the expense of the secondary teachers. Whatever the choice the Institute stood to lose. In the outcome there has been a revival of the old troubles. The non-graduates, freeing themselves once more from the primary teachers who are graduates, met on the morning of the Annual Meeting to denounce the Minimum National Scales and to seek a change of Institute policy in regard to them. The secondary teachers for their part have been holding meetings to consider whether they can continue within an Institute in which they can be overwhelmed at any time by a huge non-graduate vote. Considering all that a united profession means, not only for the teachers themselves but for the advancement of education in Scotland, we can only hope that the grave dangers of disunion for all sections may prevent any further development of these untoward movements.

The discussion of Circular 44, which had ceased during the holiday season, has begun to revive with the beginning of the work of the year in which it is to come into partial operation. The

Circular 44 again.

several authorities have by this time submitted their schemes to the Department for the testing of pupils for entry into supplementary or intermediate classes; and so far as can be judged from those schemes which have been published, there has generally been a fair attempt made to give the teachers immediately concerned with the pupils proper responsibility for the attestation. The immediate problem will be to determine the kind of test or examination that is to be set, however it is to be set and marked. Here there seems to be a considerable measurement of agreement, the common view being that so far as the test is formal it should be as simple as possible and confined to English and arithmetic. In a valuable report on the Circular prepared by a Committee of the Institute some months ago, it was recommended that the subjects should be (1) English—reading, dictation, composition, grammar (oral or written); (2) Arithmetic—written and mental; and that out of 100 marks 60 should be assigned to English and 40 to arithmetic. Very properly history and geography are omitted. The only debatable point is the inclusion of grammar. While most teachers recognize the need for the teaching of some grammar at the elementary stage, there is a fear on the part of not a few primary teachers that an undue demand may be made on them in the interests of language teaching at a later stage. As it happens there is under consideration by the branches of the Institute at the present moment a pretty detailed scheme of grammatical instruction, prepared in the first instance by the Modern Language Section and approved by a special Committee. In view of the divergence of professional opinion on the matter, and the risk of premature mechanical drill if the subject is specifically tested by examination, it would be wiser to leave grammar in the category of subjects like history and geography which enjoy the place they get in the primary school on their educational merits rather than on formal prescription.

WALES.

The summer schools held in different towns in Wales have been well attended, while the standard of the work has been fully maintained. This year, for the first time, the Board of Education organized a short course for Welsh teachers at Oxford in connexion with its scheme of recovering and classifying the rural lore of Wales. Wales is a peculiarly fruitful ground for the cultivation of interest in this subject, as many localities are admirable museums of historical objects which can be usefully employed to stimulate the curiosity of a pupil. At Oxford, lectures were given on such subjects as "Early Man in Wales," "The Old Buildings of Wales," "Old Welsh Furniture," and "Old Flint Implements." At Aberystwyth there was held an advanced course in Welsh literature arranged by the Board of Education, and very successful classes were conducted at Bangor under the auspices of the Welsh Summer School. At Barry courses of lectures on music, hygiene, and education, were given by Prof. David Evans, Dr. Colston Williams, and Miss E. P. Hughes. The Educational Handwork Association met this year at Brecon, and the Welsh School of Social Service held its eleventh session at Llandrindod Wells. The latter was addressed by Dr. Walford Davies on Music, and by the Rev. Herbert Morgan, of the University College, Aberystwyth, and Mr. Morgan Jones, M.P.

From the general report of the Board of Education for 1920-21, we learn that twenty-two State Scholarships were awarded in that year, and that there were 232 candidates for them. Out of the twenty-two successful candidates, nineteen were pupils of the intermediate schools, and thirteen of these afterwards entered one of the Welsh University Colleges. The abolition of these State Scholarships constitutes probably a greater hardship in Wales than it does in England because the great majority of the pupils in our secondary schools come from poor parents who, with the traditional Welsh enthusiasm for education, are obliged to struggle to provide their children with higher education. It is probably true that but a small proportion of the successful State scholars would have entered a University without the extra financial help given by the State, as even if successful in gaining an entrance scholarship, the pupil very often finds it impossible to raise the necessary extra funds required for his maintenance. There is, therefore, a strong feeling among Welsh head masters that the suspension of these scholarships was an educational mistake, and they are in full agreement with their English colleagues that it was a form of economy of rather a mean character.

Another interesting fact which emerges from the report is that the number of uncertificated and supplementary teachers per thousand pupils in Wales is nearly double what it is in England, the figures being 16 and 8.9 respectively.

As the success of our secondary system is so closely dependent on that of our primary schools, this is a matter of interest to all who are concerned with the control of our secondary schools. In the county boroughs, the authorities are gradually displacing the uncertificated teachers and so raising the standard of efficiency in their elementary schools; in the rural areas, on the other hand, they continue to appoint unqualified teachers to the detriment of education.

This school, which is a constituent of the University of Wales, is now fully equipped for a six years' course in medicine. It has nearly 300 students, which is a very satisfactory start. It has also apparently succeeded in overcoming most of its financial difficulties.

The National School of Medicine.

This Board has planned a survey of Wales and has arranged to make records by phonograph of all the dialects in different parts of the country.

The Board of Celtic Studies.

The archaeological section, under the direction of Dr. Mortimer Wheeler, is also engaged in excavating some of the hill forts in North Wales. Considerable progress has already been made in Segontium at Carnarvon, and at Penmaenmawr.

We regret to learn that Mr. W. Barry, B.A., late head master of the Port Talbot Intermediate School, has passed away at Bournemouth. He was educated at Tettenhall College, and was second master of Blackburn Grammar School from 1894 to 1896, when he was appointed to the head-mastership of the Port Talbot Intermediate School. He retired from this position four years ago. Mr. Barry was of a somewhat reserved disposition, and therefore did not take a very prominent share in public discussions on education. His strength lay in his work in the school, which rapidly developed into a highly efficient institution under his care.

PROFESSIONAL CLASSES AID COUNCIL.—The Professional Classes War Relief Council, founded in 1914 for relieving distress among professional and other educated people and their dependants, was re-constituted in 1921 under the above title, and the first annual report has recently been issued. The relief given takes many forms, but the principle of the Council is that it should be, so far as possible, constructive; the aim is to render the applicant self-supporting rather than to provide permanent maintenance. One of the commonest forms of assistance is to aid in the education of children, and during the past year there was an average of 56 children receiving help each term. In all, 518 applications were received in the year and 435 cases were deemed deserving of assistance. No less than £1,467 was expended in weekly grants to relieve impoverishment during unemployment and £724 was disbursed as gifts. The total expenditure for the year was £7,749 and the income £1,846, the deficit being taken from capital handed over by the War Relief Council. As is rightly stated in the report, this cannot continue indefinitely and it is to be hoped that subscriptions will be forthcoming to enable the Council to continue its excellent work.

FOREIGN AND DOMINION NOTES.

ITALY.

We wrote last month that two inspections, one Governmental, the other Communal, had been made of the Montessori classes in the two elementary schools at Rome into which the Method has been introduced; and we indicated the contents of the wholly damnable report made by the Communal inspectors. The more favourable report of the Government inspectors—Giovanni Gentile the chief of them—will be found printed in *L'Educazione Nazionale* (Catania, iv. 7). Compositions written by children without guidance, say the inspectors, form the exponent of their inner life, the indication of their mental horizon. That horizon is found in these schools to be limited; the children show themselves poor in imagination and possessed of little interest in external reality; exhibiting their own consciousness, they reveal that the mental world of their companions and their teacher has little part therein; the centre of their thoughts is almost always their own Ego. They are reflective rather than expansive. Its novelty gone, they lose regard for the rich didactic material at their disposal, so that the objects become mere symbols or recallers of past notions. The absence of class-teaching has disadvantages: "Every desire to speak or to do better than others being suppressed, the scholar is led by the very freedom in which he is left to dwell solely on his own experiences; to do again, as needing the minimum of effort and yielding the greatest apparent return, what he knows he can do well; to exalt his own little personality in view of that of which he finds it to be capable." Yet the Method has merits. Experiment with it should be continued, the inspectors recommend, only, however, in the lowest two classes, and with the express understanding that the classes are subject to observation by inspectors of every grade.

Once more we say that we are not attacking the Montessori Method, to which, as we know, many in England bring interest and favour. We contend that education, like the physical sciences, must advance, if it is to advance, by experiment. But an innovation is serviceable to progress only when its results have been nicely weighed and well approved by competent judges. Observe how Giovanni Gentile and his colleagues lay stress on the necessity of prolonged observation—of what? The Method is fixed; what fruits is it yielding? Not in Italy only, but elsewhere also is the process of testing experiments by results being applied. Thus in Germany, after the war, *Versuchsschulen* of many sorts sprang up. Many of them are now, on examination, found to be worthless, and a judgment on that at Grosszschocher runs thus: "Mere idle playing by pupils and teachers; pedagogic incapacity on the part of the conductors; crazy extravagance in disparaging ordinary schools and the present order of society." In fine, an educational method is not an end in itself; it is to be estimated by its products, precisely as a system of viticulture is justified of its grapes.

FRANCE.

The education of the adolescent and the adult is a need that shows itself daily as imperative, and the French Ministry of Public Instruction rightly sees in an extended use of school libraries an excellent means of promoting it (*Bulletin Administratif*, No. 2493). The carrying out of a decree dated December 15, 1915, relating to school libraries, was stayed by events; it has now become possible to put its provisions in force. Formerly the Government supplied such libraries with books; henceforth a money grant for the purchase of books will be assigned to each Department, the Departmental authorities (*conseil départemental, inspecteur d'académie and préfet*) drawing up lists, so that local wants and wishes may be met. Suitably equipped, the libraries, it is hoped, will draw to them most of the old pupils of the school. Not only will books be lent for home reading, but also there will be organized *séances de lecture "sur place,"* reading meetings in the school, which is to become an intellectual centre of hamlet, commune, or quarter. Each school library will be autonomous. Whilst the general principle is that of a library in every school, several schools may associate themselves to form a common library. In addition to the Government grant, revenue is expected from collections, legacies, and the sale of old books. To diffuse interest in the prosperity of the institution, three persons will be chosen from benefactors and readers to serve on the library committee,

The Montessori Method again.

of which the *maire*, the *délégué cantonal*, and the primary teacher acting as librarian will be members *ex officio*. Turning to England, we are aware that in most large towns there is a sufficiency of books freely available and of reading rooms. In many country districts it is otherwise, and the local education authorities would act wisely in developing, where necessary, school libraries to become what France intends them to be—*foyers de vie intellectuelle et morale* for the whole community. It affords an inexpensive means of quickening a retarded progress.

ORANGE FREE STATE.

The Education Report for the year to December 31, 1921, shows general progress, and, in particular, a notable increase—due to a policy of decentralization—in the number of children attending secondary classes. But the prominent feature of the Report is its exposition of the difficulties involved in bilingualism. Since the Province has rightly decided that its citizens shall be bilingual, bilingual too must be the teachers. But even a two years' course at the Normal College does not suffice to make those who follow it efficient both in Afrikaans (or Nederlands) and in English. In the schools the medium of instruction is various: in almost all rural schools it is Afrikaans. The general tendency, as it seems, is to begin with the mother tongue; at what stage then should the second official language be introduced? That and similar questions are matters of hot debate. On the whole it appears that Afrikaans fare better than English; for the inspectors in their reports lament the weakness of English in most of the schools. That the Province will overcome its linguistic difficulties we do not doubt. The schools should endeavour to give a fair knowledge of both languages; that to which the scholar ultimately gives preference will depend less on race than on occupation and environment.

TRANSVAAL.

To determine the relationship between the Government and certain colleges in the Union there was passed the Higher Education Additional Provision Act, No. 20 of 1917, and under the Regulations framed that year in accordance with the Act, the Union Department of Education exercised close control over the colleges in respect of appointments, salaries, and management. As the result of an informal conference last year between representatives of the colleges concerned and the Minister a small Commission was appointed, which drafted new Regulations incorporating the principle of Block Grants and leaving to the various institutions a much freer hand with regard to appointments and finance. There can be no doubt that universities and colleges will rejoice in this larger independence. It is a drawback, however, that, since the Block Grant is measured on a somewhat niggardly scale, certain institutions called into being by the Government will have to look to the public for help in order to cover their normal expenses. Although this is a time of economic depression, such help must be forthcoming if the development of higher education is not to be retarded.

Higher Education; Some New Regulations.

TOPICS AND EVENTS.

THE SECONDARY SCHOOL TEACHERS' WAR RELIEF FUND.—At the end of its sixth year, the working of the Fund has become regular in nature. Quarterly grants are being made in seventeen cases and help is given in other cases as required. The total amount distributed to March 31st last was £2,896 10s. 9d., the total amount subscribed to date being £9,898 7s. 2d. As sufficient capital has been accumulated to enable the original object of the Fund to be carried out, the ordinary subscription list has been closed, but special donations will be accepted for the provision of University education for those orphan children who can profit by it. Donations for the special purpose mentioned above should be sent to the Hon. Treasurer of the Fund, Mr. J. Hart-Smith, A.R.C.S., c/o Barclay's Bank, Ltd., 835 Wandsworth Road, S.W. 8. Cheques should be made payable to the Secondary School Teachers' War Relief, and crossed "Account Payee only."

THE UPLANDS ASSOCIATION.—The seventh summer meeting was held at Hill Farm, Stockbury. Drama was the chief subject of study, and in Mr. St. John Ervine the Association

Fifty Figure and Character Dances for Schools

By ELIZABETH TURNER BELL,

Infants' Mistress of Ancrum Road Public School, Dundee; Lecturer and Demonstrator at St. Andrew's Summer School, 1919; Demonstrator at Dunfermline Holiday Course, 1920.

**Illustrated from Photographs
and with numerous Diagrams.**

Dancing, quite rightly, is taking a more and more important place in the school curriculum, and a largely increased number of schools are introducing this session. The difficulty of securing suitable instruction has by the use of this work been overcome, and now it is possible for any teacher without previous experience to teach the subject from the individual steps to the complete dance. When dancing is introduced into the school and allowed to take its place amongst the regular lessons, the advantages to the pupils are soon apparent. Alike in the lethargic and in the volatile child an improvement is manifest. Dancing enables those who appear dull by nature to throw off with ease all that waste matter in the little bodies which, by clogging the liver, makes an otherwise bright intellect slow and sluggish in working. For the child who is so naturally "lively" as to prove a source of distraction and, on occasion, a hindrance to more serious studies, dancing supplies exactly what the conscientious teacher has been looking for. It provides a legitimate outlet for those high animal spirits which are frequently signs of ability and always of energy.

The Board of Education says, "The aims of the teaching of Dancing are:

- | | |
|--|--|
| (1) "To encourage alertness, independent action, and a ready response to unexpected directions. | (3) "To stimulate the respiration and circulation by encouraging great activity, so aiding growth and helping to secure good health. |
| (2) "To maintain flexibility of body and so prevent or reduce the need for corrective exercises in latter years. | (4) "To encourage a bright, happy, fearless, independent spirit." |

The Standard Work on the Subject.

Invaluable to Educationalists who realize its Importance.

J.E.G. 1922.

This may be posted for 3d. stamp if envelope is unsealed.

found a dramatist who was not only able to lecture with great lucidity, but also to give an insight into the practical problems which face the writers of plays. Rhythmic movement and elocution were in the capable hands of the Misses Duff and Walton, and at the conclusion of the course a most attractive demonstration of the principles of Greek dancing was presented. A small seminar in psychology in relation to dramatic values was conducted by Miss Bodkin, and Prof. Findlay gave lectures on the wider aspects of drama and the fine arts. It was unfortunate that only fifty members could be accommodated at the Farm. The usual summary of proceedings will be postponed until the next summer meeting, at which Mr. Ervine will again deal with drama as the main subject.

ASSOCIATION FOR THE REFORM OF LATIN TEACHING.—The 1922 summer school was held at the Bede Training College, Durham, August 2-12. Though not as numerous as last year, the school was full of vitality, industry, and good-will. The programme included demonstration lessons in first-year Latin and Greek by Miss L. Broad and Dr. Rouse; Latin reading and conversation classes; lectures given by members and others on Durham, Virgil, Colchester, and the Roman Wall. The last, by Mr. F. G. Simpson, was especially instructive, and was followed by a most enjoyable visit to parts of the Wall itself, particularly Borcovicium and Cilurnum. There was plenty of discussion, both formal and informal, of practical matters; in particular two meetings were given to the question of the content of three and four years Latin courses in secondary schools. The Association hopes shortly to publish a scheme of work for such courses. The journal of the Society is *Latin Teaching* (edited by Mr. L. R. Strangeways, Bury Grammar School, Lancs.). Applications for membership and inquiries should be sent to the Hon. Secretary, Miss M. F. Moor, 45 High Street, Old Headington, Oxford.

BRITISH MANDATE IN PALESTINE.—The Zionist Organization is prepared to send a lecturer on the British Mandate in Palestine, and the Jewish National Movement, free of all charge to any organization or society. The lecture can be illustrated by lantern slides dealing with Palestinian life and scenery. Particulars can be obtained from the Secretary, 77 Great Russell Street, London, W.C. 1.

SCHOOL EXAMINATIONS RESULTS.—Class lists for many of the examinations held in July last have now been issued. At the Cambridge Higher School Certificate Examination, at home centres, of the 436 entries (268 boys and 168 girls) there were 229 (147 boys and 82 girls) who obtained certificates. The greatest number of distinctions awarded was in English (16), closely followed by history (14), chemistry (14), and mathematics (13). On the corresponding examination held by the Joint Matriculation Board of the Universities of Manchester, Liverpool, Leeds, Sheffield, and Birmingham, about 1,100 certificates were awarded. Distinctions went mostly to the science side, more than forty being awarded for physics; in many cases, a distinction in physics went with similar marks in pure and applied mathematics. At the School Certificate Examination, held by the Joint Board, more than 6,000 candidates were successful.

CAMBRIDGE LOCAL EXAMINATIONS.—The published class lists of the Cambridge Senior and Junior Local Examinations held in July have shown that the total number of candidates entered was 7,959. In the Senior Examination 2,063 boys and 2,285 girls passed, First Class honours being gained by 128 boys and 40 girls. Of the junior candidates 312 boys and 458 girls satisfied the examiners.

UNIVERSITY DIPLOMA IN JOURNALISM.—The pass list issued as the result of the recent examination for the diploma for journalism at London University included the names of thirty students, of whom fourteen are women. Three students were distinguished in English composition, six in English literature and criticism, two in the principles of criticism, and one each in philosophy and political science. The new syllabus and time-table can be obtained from the Academic Registrar, University of London, South Kensington.

HUMANITIES AT BIRKBECK COLLEGE.—The College is extending its work in the direction of the humanities. In addition to the lectures on philosophy, ethics, and logic, a course in psychology will be provided, and in the history department a complete course for the Honours Degree has been arranged. The prospectus, giving full particulars of the work of the College, may be obtained on application to the Secretary.

BATTERSEA POLYTECHNIC.—The convenient system of providing sectional calendars for the departments, domestic science, hygiene, and technical college, and an abridged calendar of afternoon and evening classes, in addition to the complete calendar of the institution, has been adopted by Battersea Polytechnic. There are full day and evening courses in preparation for science, engineering and music degrees in the University of London, teachers' courses in domestic science, and evening courses covering a wide range of subjects. Copies of the calendars can be obtained from the Polytechnic, Battersea Park Road, S.W. 11.

WOMEN AS ENGINEERS.—Before the war there were many obstacles in the way of a woman desirous of entering a profession, and the idea of women as engineers in particulars was scarcely taken seriously into consideration. The experience of the last few years has shown, however, that women can occupy a position in the profession; there is now a Women's Engineering Society, which was incorporated in 1920, and recently we have read of the first woman engineer who shipped on board an ocean-going steamer. Several women engineers are now training in this country, and it is remarked in the *Woman Engineer*, the organ of the Women's Engineering Society, that they have yet another opening, for the Worshipful Company of Shipwrights now admits women to membership.

PRIZE COMPETITIONS.

The prize for the Summer Competition is divided between "M. E. D." and "M. L. H."

(1) LIST OF TWENTY NOVELS TO FORM THE NUCLEUS OF A LIBRARY FOR BOYS AND GIRLS OF SEVENTEEN TO NINETEEN, SCOTT, JANE AUSTEN, DICKENS, THACKERAY, GEORGE ELIOT, AND ALL HISTORICAL NOVELS BEING EXCLUDED.

By "M. E. D."

"Jane Eyre," by Charlotte Brontë; "Cranford," by Mrs. Gaskell; "Tales of Mystery and Imagination," by E. A. Poe; "The Ordeal of Richard Feverel," by George Meredith; "Under the Greenwood Tree," by Thomas Hardy; "Lorna Doone," by Blackmore; "Tess of the D'Urbervilles," by Thomas Hardy; "The Master of Ballantrae," by Stevenson; "The Little Minister," by Barrie; "Chance," by Conrad; "The Rescue," by Conrad; "Kim," by Kipling; "Joan and Peter," by Wells; "Forest Lovers," by Hewlett; "The Forsyte Saga," by Galsworthy; "Clayhanger," by Arnold Bennett; "It Never can Happen Again," by de Morgan; "The Valley of Decision," by Edith Wharton; "Starbrace," by Sheila Kaye Smith; "The Golden Scarecrow," by Walpole.

THE PRIZE EDITOR'S LIST.

"The Vicar of Wakefield," by Goldsmith; "Shirley," by Charlotte Brontë; "The Cloister and the Hearth," by Reade, or if that be counted as a historical novel, "It's Never Too Late to Mend"; "Sylvia's Lovers," by Mrs. Gaskell; "All Sorts and Conditions of Men," by Besant; "A Daughter of Heth," by William Black; "Lorna Doone," by Blackmore; "John Halifax," by Mrs. Craik; "The Master of Ballantrae," by R. L. Stevenson; "Kim," by Kipling; "Robbery under Arms," by Bolderwood; "Under the Greenwood Tree," by Hardy; "The Ordeal of Richard Feverel," by Meredith; "The Forest Lovers," by Hewlett; "She Walks in Beauty," by Katharine Tynan; "The Beloved Vagabond," by Locke; "Four Feathers," by A. E. W. Mason; "Almayer's Folly," by Conrad; "The Velvet Glove," by Seton Merriman; "Kippis," by H. G. Wells.

Twenty-nine lists of novels were received, and they contained the names of 326 volumes. A curious feature was the inclusion in nearly every case of books which cannot be called novels. Even the prize-winner is not immaculate in this respect; "Tales of Mystery and Imagination" is certainly not a novel, and "Cranford" is on the border line. One list, otherwise good, included "Erewhon" and "Eothen." Novels unsuitable for youth were rarely mentioned, but one competitor, presumably ignorant, mentioned "Tom Jones." We are conscious that "The Vicar of Wakefield" and "Jane Eyre" are on the frontiers of what is permissible. It is impossible to classify the twenty-nine candidates, but "Shax," "Erbstock," "P. H. M.,"

and "Clef" deserve honourable mention. The twenty most popular novels were: "Lorna Doone," 14 votes; "Cranford," 12 votes; "Kim," 12 votes; "Vicar of Wakefield," 10 votes; "Jane Eyre," 9 votes; "Shirley," 8 votes; "Wuthering Heights," 8 votes; "Kipps," 7 votes; "Beloved Vagabond," 7 votes; "Four Feathers," 7 votes; "Old Wives' Tales," 6 votes; "Lavengro," 6 votes; "Villette," 6 votes; "Under the Greenwood Tree," 6 votes; "Ordeal of Richard Feverel," 6 votes; "The Little Minister," 5 votes; "John Halifax, Gentleman," 5 votes; "Master of Ballantrae," 5 votes; "Stalky and Co.," 5 votes; "The Sowers," 5 votes. Of these we have included twelve in our own list, and "Stalky and Co." is the only work which we should refuse to admit to our shelves. It should be added that in our list no one author is mentioned more than once; this was done in order to add to its helpfulness, not because any such condition was laid down.

(2) LIST OF TWENTY BOOKS, NOT STORIES, GIVING INFORMATION AND INSTRUCTION IN A LIGHT AND READABLE FORM, SUITABLE FOR BOYS AND GIRLS OF FOURTEEN TO SIXTEEN.

By "M. L. H."

"Ancient Times," by Breasted; "Life in Ancient Athens," by Tucker; "Life in the Roman World of Nero and St. Paul," by Tucker; "A History of Everyday Things in England," by Quennell; "London," by Walter Besant; "Life in Shakespeare's England," by J. D. Wilson; "The Book of the Epic," by Guerber; "Myths of Greece and Rome," by Guerber; "The Young People's Story of Art," by J. P. Whitcomb; "The Book of the Great Musicians," by Percy Scholes; "Scrambles Among the Alps," by Whympier; "South," by Shackleton; "Livingstone the Pathfinder," by Basil Matthews; "The Path to Rome," by Hilaire Belloc; "The Story of the Heavens," by Sir Robert Ball; "The World of Sound," by Bragg; "White's Natural History of Selborne," with notes by Kearton; "Flowers of the Field," by Johns; "The Romance of Modern Photography," by Gibson; "Toymaking in School and Home," by R. K. and M. I. R. Polkinghorne.

THE PRIZE EDITOR'S LIST.

Religion and Mythology.—"How we got our Bible," by

Paterson Smyth; "Myths of Greece and Rome," by H. A. Guerber. *Sociology*.—"Our Country's Industrial History," by W. J. Claxton. *Science*.—"Romance of Modern Chemistry," by J. C. Philip; "Sun, Moon, and Stars," by A. Giberne; "Romance of Modern Electricity," by C. R. Gibson; "Geology of To-day," by J. W. Gregory; "Open Book of Nature," by C. A. Hall. *Useful Arts*.—"Let me explain," by A. Williams; "Boys' Book of Railways," by J. R. Howden; "Engineering of To-day," by T. W. Corbin; "Things to make," by A. Williams. *Fine Arts*.—"Book of Art," by A. E. and Sir W. Conway; "Romance of Modern Photography," by C. R. Gibson; "Book of the Great Musicians," by P. A. Scholes. *Literature*.—"English Literature for Boys and Girls," by H. E. Marshall. *History*.—"Story of Mankind," by H. Van Loon; "Our Empire Story," by H. E. Marshall. *Geography and Travel*.—"Famous Voyages of Great Discoverers," by E. Wood. *Biography*.—"Red Book of Heroes," by Mrs. A. Lang.

The number of lists of instructive books sent in was not very large, but some were very useful. "Sakul," "Robin Hood," and "Lenore" deserve honourable mention. In the prize winner's library the humanities get rather more than their fair share of space, but it must be recognized that it is very difficult for any one individual to cover the whole field of knowledge. In selecting our own twenty, however, we have been bold enough to attempt to give a fair share of shelf-room to every branch of learning. But "M. L. H.'s" list is a very good one, and every volume mentioned is worthy of a place on the line.

A Prize of Two Guineas is offered for the best translation of the following extract from Bossuet's "*Oraison funèbre d'Henriette Marie de France*."

CROMWELL.

Un homme s'est rencontré d'une profondeur d'esprit incroyable, hypocrite raffiné autant qu'habile politique, capable de tout entreprendre et de tout cacher, également actif et infatigable dans la paix et dans la guerre, qui ne laissait rien à la fortune de ce qu'il pouvait lui ôter par conseil et par prévoyance; mais au reste si vigilant et si prêt à tout, qu'il n'a

(Continued on page 658.)

Westminster Hospital Medical School

(University of London).

Telephone No.: **Victoria 765.**

The Hospital is situated opposite Westminster Abbey and the Medical School is only a few minutes' walk from it.

The entire teaching of the Hospital and School is devoted to the subjects of the Final Examinations. Arrangements are made for the tuition required for Preliminary and Intermediate subjects.

The School and Hospital Appointments are open on the same terms and conditions to Men and Women Students.

Entrance Scholarships.

Half of purchase money could be paid off by instalments. For further particulars, apply T 3369, c/o. TRUMAN & KNIGHTLEY, LTD., School Transfer Agents, 61 Conduit Street, London, W. 1.

jamais manqué les occasions qu'elle lui a présentées ; enfin, un de ces esprits remuants et audacieux qui semblent être nés pour changer le monde. Que le sort de tels esprits est hasardeux, et qu'il en paraît dans l'histoire à qui leur audace a été funeste ! Mais aussi que ne font-ils pas quand il plaît à Dieu de s'en servir ? Il fut donné à celui-ci de tromper les peuples, et de prévaloir contre les rois. Car comme il eut aperçu que, dans ce mélange infini des sectes qui n'avaient plus de règles certaines, le plaisir de dogmatiser sans être repris ni contraint par aucune autorité, ecclésiastique ni séculière était le charme qui possédait les esprits, il sût si bien les concilier par là, qu'il fit un corps redoutable de cet assemblage monstrueux. Quand une fois on a trouvé le moyen de prendre la multitude par l'appât de la liberté, elle suit en aveugle, pourvu qu'elle en entende seulement le nom. Ceux-ci, occupés du premier objet qui les avait transportés, allaient toujours, sans regarder qu'ils allaient à la servitude ; et leur subtil conducteur, qui, en combattant, en dogmatisant, en mêlant mille personnages divers, en faisant le docteur et le prophète, aussi bien que le soldat et le capitaine, vit qu'il avait tellement enchanté le monde, qu'il était regardé de toute l'armée comme un chef envoyé de Dieu pour la protection de l'indépendance, commença à s'apercevoir qu'il pouvait encore les pousser plus loin. Je ne vous raconterai pas la suite trop fortunée de ses entreprises, ni ses fameuses victoires dont la vertu était indignée, ni cette longue tranquillité qui a étonné l'univers. C'était le conseil de Dieu d'instruire les rois à ne point quitter son Eglise.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on October 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

FREE PUBLIC LECTURES.

[Under this heading a list of free public lectures of especial interest to teachers will be published month by month. The figure in parentheses indicates the number of a lecture if it is one of a series. Titles of lectures for possible insertion in this list should be received at the Journal Office not later than the middle of the month preceding that in which the lecture is to be delivered.]

OCTOBER 3

GRESHAM COLLEGE, at 6.—Mr. Foster Watson : Rhetoric (Gresham Lecture) (1). Also on October 4, 5, and 6.

A List of Modern Geographical Text-Books.

Containing NEW AND ORIGINAL MAPS and unique illustrations.

THE O. AND C. GEOGRAPHY.

This world-renowned Text-book, of which over one and a half millions have been sold, has now been entirely reset and revised to date; the latest edition contains a complete set of 35 Coloured Full-page Maps. It is claimed by the Publishers that this book is an essential handbook, as it deals fully with all relevant facts and contains no "padding." It is a publication which is necessary, even when the ultra modern geography is in use; for whilst the latter contains interesting and useful matter the "O. and C. Geography" contains only necessary facts. 2s.

THE BROAD OUTLOOK.

By J. HARTLEY FUIDGE, M.A. A new Physical Geography on modern lines. Aeroplane Photos have been specially taken to illustrate the Text, which is explanatory and interesting. Questions are set at the end of each chapter. This book is written in such a way as to make it easy to teach from and be taught by. Sixteen Full-page and many other Illustrations. 105 pp. 1s. 9d.

THE GEOGRAPHY OF THE WORLD IN TWO PARTS.

By GEORGE GILL, F.R.G.S. Expressly arranged in a Series of Home Lessons. This book contains 14 Full-page Maps not overcrowded with names, dealing fully with the British Isles and with the Continents. 9d.

AN ATLAS GEOGRAPHY OF EUROPE.

Physical and Political. Designed to form the basis of a complete study of the Geography of the Continent. The fact that this handbook is illustrated with many Full-page Coloured Maps incorporating the latest political alterations, clearly, yet without too much detail, gives it an educational value of great importance. 44 pp. 4d.

Please apply for specimen copies of any of the publications described above with a view to adoption for class use in your school.

GEORGE GILL & SONS, LTD., 13 Warwick Lane, LONDON, E.C. 4.

MR. MURRAY'S LIST**A SENIOR
ENGLISH GRAMMAR.**

By R. B. MORGAN, M.Litt., Inspector of Schools to the Croydon Education Committee, and H. A. TREBLE, M.A., Senior English Master, Selhurst Grammar School.

This book is intended to follow and supplement "A New English Grammar," by R. B. Morgan. The Authors have made it their prime object to present in a brief and interesting form the laws upon which our present-day standard English is based. One of its principal features is the large number of quotations from standard authors. **3s. 6d.**

By R. B. MORGAN, M.Litt.

THE GROUNDWORK OF ENGLISH.

A complete course in English for Preparatory Classes. In 2 parts. **1s. 6d.** each.

A NEW ENGLISH GRAMMAR. For Junior Forms. 82nd thousand. **2s.**

N.B. REDUCTION OF PRICE. The opportunity has been taken with the issue of a new reprint of Morgan's "Junior English Grammar" to REDUCE ITS PRICE from 2/3 to 2/- and at the same time to restore the board binding.

"The Groundwork of English" has also been reduced from 1/9 to 1/6 each part.

THE ELEMENTS OF GRAMMAR.

(Part I of "A New English Grammar.") **1s.**

EXERCISES IN ENGLISH GRAMMAR. Designed for use as an independent book, or to supplement "A New English Grammar." **1s. 9d.****EXERCISES IN THE ELEMENTS OF GRAMMAR.** (Part I of "Exercises in English Grammar.") **1s.****ENGLISH COMPOSITION.** For Junior Forms. By E. E. KITCHENER, M.A., Whitgift Grammar School, Croydon. **2s. 3d.****EXERCISES IN ENGLISH COMPOSITION.** By E. E. KITCHENER, M.A. Designed for use as an independent book, or to supplement the above. **1s. 9d.****MATTER, FORM, AND STYLE.** By HARDRESS O'GRADY. **3s.****COMMON - SENSE ECONOMICS.** A practical elementary book for Schools and general readers. By L. LE MESURIER. **6s. net.**

ENGLAND AND THE EMPIRE

A Modern History with some Account of European Influences.

An Introductory Series for Middle Forms, the principal features of which are (1) the limitation of topics to those which form the more important links in the chain of British Social and Political Development; and (2) the frequent reference made to the contemporary history of Europe and to Colonial Development.

BOOK I.—*From Earliest Times to 1485*. 12mo, cloth, illustrated, 157 pages. 2s. 3d. net.

By E. STEVINSON, Lecturer in Handwork and Education at the Rachel McMillan Training Centre.

BOOK II.—*From 1485 to 1660*. 12mo, cloth, illustrated, 192 pages. 2s. 9d. net.

By EDWARD M. FIELD, sometime Scholar of Trinity College, Oxford, late H.M. Inspector of Schools.

BOOK III.—*From 1660 to 1815*. 12mo, cloth, illustrated, 254 pages. 3s. 3d. net.

By EDWARD M. FIELD, sometime Scholar of Trinity College, Oxford, late H.M. Inspector of Schools.

BOOK IV.—*From 1815 to the End of the Great War*. 12mo, cloth, illustrated, 319 pages. 3s. 9d. net.

By EDWARD M. FIELD, sometime Scholar of Trinity College, Oxford, late H.M. Inspector of Schools.

(A Prospectus of the Series will be sent post free on application.)

Books forwarded on approval to Teachers.

The NEW ASTRONOMICAL MODEL

SPECIALLY DESIGNED FOR USE
IN SCHOOLS AND COLLEGES

By WILLIAM WILSON, M.B., C.M., F.R.A.S.

Can now be obtained for
£27 10s. Od.
on the

PAYMENT by INSTALMENT SYSTEM

consisting of 5 nearly equal instalments spread over 2 years, the first instalment being paid on delivery, and the 2nd, 3rd, 4th, and 5th at successive intervals of 6 months.

Whilst a very large number of these Models have been purchased by Educationists in this Country and Abroad, the number of these purchasers only represents a very small proportion of those desirous of possessing the Model as evidenced by the large number of inquiries received and appreciation expressed as to the great value of the apparatus in Educational Work.

This is easily to be accounted for by the present financial conditions of the Country very seriously affecting Educational Institutions, as they do every other department of life, and in the majority of Schools, rendering it impossible to obtain a special financial authorization for the expenditure *en bloc* of the sum required for the purchase of such a Model, while at the same time it is equally difficult out of the small annual grant available for the upkeep of Scientific Apparatus and Material to allocate for one single piece of apparatus the requisite sum.

It is confidently hoped that this difficulty will be to a large extent overcome by the adoption of this method of Payment by Instalments.

INFORMATION A and B post free 6d.

- A Fully Illustrated Pamphlet** and Circulars describing the various types of Model now made and the corresponding prices at which they can be obtained.
- B Detail particulars** regarding the plan of Payment by Instalments. Those already possessing the former (A) can be supplied with the latter (B) post free 2d.

This Payment by Instalment is only applicable to Purchasers in the United Kingdom.

All Communications to be sent *direct* to Dr. WILSON, 43 Fellows Road, London, N.W.3.

Now Ready. **THIRD EDITION.** Size 11 × 7½ inches. Pp. viii + 186.
With 50 Plates showing 138 Figures and 94 other Illustrations in the Text.
Price 10s. 6d. net. Postage 10d.

MANUAL OF ARTISTIC ANATOMY

Being a Description of the Bones and Muscles that influence the External Forms of Man. By J. C. L. SPARKES, late Principal Royal College of Art, South Kensington. Revised with Additional Illustrations by WILLIAM H. GATES, A.R.C.A. (Lond.), Gold Medallist of the Royal College of Art, London.

Uniform with above.

THE ART OF DRAWING

THE HUMAN FIGURE SIMPLIFIED

By WILLIAM H. GATES, A.R.C.A. (Lond.).

Size 7½ × 9½ inches. Pp. xii + 100, with 23 Plates containing 320 Figures. Stiff Boards. Price 7s. 6d. net. Postage 10d.

ELEMENTARY (Second Grade) PERSPECTIVE Theory and Practice.

By H. J. DENNIS,

late Principal Art Master, Dulwich College.

SEVENTEENTH EDITION. With 21 Figures in the Text and 21 Plates 11 × 7½ inches. Price 3s. 6d. net. Postage 6d.

FAU'S ELEMENTARY ARTISTIC ANATOMY OF THE HUMAN BODY. For the Use of Art Schools, Colleges, &c.

Translated and Edited by C. CARTER BLAKE, D.Sc.

Eleventh Edition. With 17 Steel Plates, containing 47 Engravings.
Price 5s. net. Postage 4d.

BAILLIÈRE, TINDALL & COX,
8 Henrietta Street, Covent Garden, London, W.C.2.

MASON'S SCRIPTURE MANUALS.

By the late W. T. MASON, M.A.,
Sid. Suss. Coll., Cambridge.

IN these Manuals each chapter and verse of the Bible has been taken in order, and Questions similar to those set in the Oxford and Cambridge Local Examinations carefully selected in every chapter, together with numerous Explanatory Notes collated from various commentaries. After each question, the answer is either given in full, or the number of the verse or verses in which it occurs.

The following Manuals are already published:

	s.	d.
The Four Gospels each	0	9
The Acts of the Apostles	1	6
Genesis and Exodus	1	6
Joshua and Judges	1	0
Samuel I	0	9
Samuel II	0	9
Kings I	0	9
Kings II	0	9
Jeremiah	0	9
Ezra, Nehemiah, Esther, and Haggai ..	0	9
Corinthians II	0	9
The Church Catechism	0	9
Morning and Evening Services and Litany	1	6

- A Catechism on the Ten Commandments**, with one hundred Practical Questions specially adapted for Children of all Religious Denominations in Elementary Schools. Price 4d.

Euclid (Book I) made easy for Young Beginners. Price 1s.

Room 17, Waterloo Buildings,
Piccadilly, Manchester.

VERSAILLES: BEFORE AND AFTER

AS in the war of 1870-1, Germany, though victorious, was so afraid of French aggression that she took from her Alsace and half Lorraine "for security," so now, though France and her allies have beaten Germany to the ground, the French Republic is insisting on a policy of crippling her enemy lest she should suddenly attack her and undo the settlement of Versailles. How old is this mutual hostility of these two Powers? It dates back over a thousand years and began as soon as there was a France and a Germany in any modern sense; when in 843 the grandsons of Karl the Great (Charlemagne) divided the dominions of their grandfather, one of them took Germany, another France, and the third, Lothar, took a narrow strip of territory between them, extending from the North Sea to the middle of Italy, a strip named after him Lotharingia, a word which has become Lothringen and Lorraine.

The arrangement did not last long, and the various parts of this strip have had a varied history; the original cantons of Switzerland gradually made good their independence of their Austrian lords in the fourteenth century, and later gathered into their confederation the other States which form the Helvetic republic, the cities of northern Italy practically made good their independence of the German emperors and started on a tangled career of mutual rivalry and foreign conquest, which ended only in the nineteenth century with the formation of the kingdom of Italy; and the Netherlands had a history which ended in the formation of the kingdoms of "Holland" and Belgium.

For a time, in the fifteenth century, there was a dynasty of count-dukes which, in the person of Charles the Bold, held a large territory, including the Netherlands, Lorraine, &c., but when Charles died in battle against the Swiss in 1477 all his possessions, except the Duchy of Burgundy, went with his daughter to the Hapsburg house of Austria, and thus came to belong to the Emperor Charles V, who in turn gave them to his son, Philip II of Spain; how Philip lost the seven northern Netherland provinces but kept the southern ones (Belgium) is a well-known story. Now it is the possession of Belgium and the Rhinelands which lie between Belgium and Switzerland that has been the cause of long wars between France and her western neighbour, wars of the French monarchy, wars of Napoleon, and those two wars which some of us can remember, the first of which established the German Empire, the second of which has overthrown it. The two, France and Germany, face one another across the Rhine, they are mutually suspicious, and it will take all the wisdom of Europe, all the force of the League of Nations, and of all the peace-loving peoples of Europe to heal the long-lived wound. We pray that they may prevail.

REVIEWS AND MINOR NOTICES.

NINETEENTH CENTURY BRITAIN.

The Change to Modern England (From 1750): An Introductory Survey. By H. ALLSOPP. (3s. Nisbet.)
British History in the Nineteenth Century (1782-1901). By G. M. TREVELYAN. (12s. 6d. Longmans, Green.)
A History of England and the British Empire. In Four Volumes. Vol. IV, 1802-1922. Second Edition. By A. D. INNES. (8s. 6d. Rivington.)
A History of England: The Nineteenth Century and After, 1815-1921. By C. E. ROBINSON. (5s. Methuen.)

The importance of history in the culture of citizenship, and the dominant interest of the nineteenth century to students of current politics, explain the simultaneous appearance of these four volumes, all of which cover large tracts of one and the same ground. True, they have slightly different starting points. Mr. Allsopp, whose concern is mainly with social and economic phenomena, starts from the peaceful rural England of the middle of the eighteenth

century and follows the course of the industrial revolution until he reaches modern times. Mr. Trevelyan, who inherits Macaulay's political tradition, begins with the collapse of George III's personal Government in 1782 and traces the growth of democracy and the expansion of the British Empire to the death of Queen Victoria. Mr. Innes takes up a story which he had already carried down to 1802, when an interval occurred in the great wars with the French, and he pursues a general narrative in which all prominent national activities are touched upon, until he reaches the Irish Settlement of January, 1922. Mr. Robinson's volume is also the fourth of a series, the previous member of which has carried the story of Britain and the Empire to the cardinal year 1815. If, however, the starting points of these books differ, and if to some extent different aspects of history are emphasized in them, nevertheless there is an impressive unanimity in respect to the events and the movements which are of primary significance during the course of the wonderful century under review.

Mr. Allsopp, who is introduced by the benevolent Master of Balliol, is singularly successful in tracing in a concise and luminous sketch the course of the transition from the old to the new order in England. This little book forms an admirable text-book for those who wish to make a beginning of the study of recent industrial history.

Mr. Trevelyan is not quite so happy as usual in his style. He is working on a scale too minute for his fine pictorial art. He has no room for vivid word-painting. His narrative, indeed, suffers from some disproportion as well as from excessive compression. The period from the death of Palmerston to the death of Victoria is very summarily treated. The best and most characteristic chapters are the opening ones, in which first a description of the rural England of 1782 is given, and secondly an account of the rapid transformations of the half century which ended with the Reform Act of 1832 is presented. Mr. Trevelyan writes of this period with the fullness of knowledge which his recent study of Earl Grey's career has made his own. The volume, as a whole, however, makes a strong appeal to the general reader, and it will no doubt enjoy a wide and useful popularity.

Mr. Innes' four-volumed history of Britain and the Empire is too well-known, and too highly appreciated, to require any extended notice. The volume before us is merely a second and enlarged edition of one which appeared originally in 1915. Two appendices bring the record of events up to the present day.

Mr. Robinson's volume completes the task which has occupied its author several years. The narrative which Mr. Robinson presents, unlike Mr. Trevelyan's, grows in fullness as it approaches the latest times. In particular the accounts of the Great War and the Peace Settlement are excellent in their completeness and balance.

All four volumes can be cordially commended to those who are anxious to furnish their school libraries with sound and interesting works bearing upon the nineteenth century.

AMERICAN UNIVERSITY INSTITUTIONS.

Universities and Scientific Life in the United States. By Prof. M. CAULLERY. Translated by J. H. WOODS and E. RUSSELL. (10s. 6d. net. Cambridge: Harvard University Press. London: Milford. Oxford University Press.)

The value of this book is that it gives a Frenchman's views of American University education. Opinion is so divided on this matter among ourselves that a neutral estimate is very welcome. On the whole, it is highly favourable to the transatlantic institutions of higher learning, though Prof. Caullery is rather doubtful about secondary education, which he regards as the weak link in the American system. He is at some pains to make his position clear. To begin with, he points out in this translation that the original was written for French consumption and accordingly contains certain adverse criticisms of the educational

system of his country that may be misunderstood by outsiders. One may deal faithfully with one's own, and yet may not like others to take our strictures at their face value. Then he is anxious that he should not be thought to pretend to have discovered America. He admits that many people know all that he has put down here, but then there are many more who do not. As a matter of fact, he makes an illuminating presentation of the whole subject that will be read with profit even by those who are familiar with the American universities and scientific institutions. It is to be regretted that the translation has been so long in appearing, but we must accept the convincing explanation that the delay was caused by the loss of the original MS. in the Atlantic during the war. The consequence is that the statistics are far from up-to-date. But the value of the book does not consist in its figures but in its atmosphere. The personal reaction of a biologist of first-rate rank, a professor in the Sorbonne, is enlightening. He is not merely a man of science but a man of affairs, with a keen interest in education at all grades. He has the practical Frenchman's capacity for seeing things as they really are. In particular he looks at the American child with a critical if tolerant eye. Those teachers who are depressed by the demands of the "emancipationists" will find the other side well represented in these pages.

A CYCLOPÆDIA OF APPLIED PHYSICS.

A Dictionary of Applied Physics. In Five Volumes. Vol. I, Mechanics—Engineering—Heat. Edited by Sir RICHARD GLAZEBROOK. (6js. net. Macmillan.)

Sir Richard Glazebrook and his collaborators, together with the publishers, are to be congratulated on the issue of the first volume of this important work. Whilst chemistry, both in its theoretical and in its practical aspects, has long been served by useful dictionaries, the sister science of physics has been less adequately recognized, and no similar work of reference has assisted the investigator. The establishment of the National Physical Laboratory in 1900 marked an important step in the application of physics to industry, and the value of the work done under Sir Richard Glazebrook as Director is now universally recognized. "The results of the labours of the past are, for the most part, scattered in the *Proceedings* of learned societies or stored in the brains of the active workers to whose efforts they are due." It is the object of the "Dictionary of Applied Physics" to give the latest and most accurate information on the many subjects which arise in connexion with the physical aspects of modern manufacturing processes—or at least to indicate where such information may be found. At the same time it must be pointed out that a very large part of the "Dictionary" appeals just as strongly to the theoretical physicist as to the technician. The volumes should find a place in the library of every Physical Department or Laboratory.

The best way of proving the worth of such a volume is to test it by actual experience. The reviewer wished to learn the exact distinction drawn at present between the "elastic limit" and the "yield point." Taking up the volume, he found at once the article on "elastic constants." Almost the first page to catch the eye contained § 62 on the elastic limit, but this section did not give the desired information as to the yield point, so after turning over the earlier pages of the article, which were found to contain descriptions of testing machines, reference was made to "yield point" in its alphabetical order at the end of the volume. Here we find "definition of the yield point and distinction between it and the elastic limit. See 'Elastic Constants, Determination of,' §§ (21), (62)." However, § 21 seems to presuppose a considerable knowledge on the part of the reader, though it supplies the definition required: "the yield point is slightly higher than the elastic limit, and is the point at which there is an increase in the extension without a corresponding increase in the

(Continued on page 674.)

Recent Publications of the Cambridge University Press

The French Tradition in Education. *Ramus to Mme Necker de Saussure.* By H. C. BARNARD, M.A., B.Litt. With 8 plates and 2 maps. Crown 8vo. 10s 6d net.

There are many aspects of the history of Education in France which have not yet been presented to readers in this country or even, in any detail, in France itself, and it is with the object of filling in some of the existing lacunae that the present volume has been prepared.

The Educational Writings of John Locke. Edited by JOHN WILLIAM ADAMSON, Professor of Education in the University of London. With a frontispiece. Crown 8vo. 7s 6d net.

This book is the second edition of a work originally published in 1912. It is an attempt to make clear the position of John Locke amongst the various influences which have shaped the real history of education.

Society and Solitude. By E. T. CAMPAGNAC, Professor of Education in the University of Liverpool. Crown 8vo. 8s 6d net.

"Study of a book of this type, noble in its conceptions and practical in its outlook, should do much to educate public opinion in the world of education."—*The Times Educational Supplement.*

History of Switzerland, 1499-1914. By WILHELM OECHSLI, late Professor of Swiss History at the University of Zurich. Demy 8vo. With 3 maps. 20s net. Cambridge Historical Series.

"We cordially welcome this new volume in the Cambridge Historical Series, which will supply a want that has long been felt. . . . It is written throughout with a fullness of knowledge. . . . A book which every student will find sound and useful."—*The Times Literary Supplement.*

History of Holland. By GEORGE EDMUNDSON, D.Litt., F.R.G.S., F.R.Hist.S. With 2 maps. Demy 8vo. 22s 6d. Cambridge Historical Series.

"Had we been asked at any time in recent years to name the leading authority on Dutch history in this country, the answer would certainly have been the name of the author of this work."—*The Times Literary Supplement.*

Principles of Geometry. Vol. I, Foundations. By H. F. BAKER, Sc.D., F.R.S., Lowndean Professor of Astronomy and Geometry. Demy 8vo. 12s net.

"The volume is a most interesting and pertinent one, and the student will learn more from it in a month than from many of the text-books crammed with intricate details of what—we have often wondered why—is called 'elementary geometry.'"—*The English Mechanic.*

Supplement to Notes on Qualitative Analysis. Concise and Explanatory. By H. J. H. FENTON, Sc.D., F.R.S., F.I.C., F.C.S., University Lecturer in Chemistry, Cambridge. Crown 4to. 3s 6d net.

The author gives in this Supplement a concise list of the reactions of the rarer elements, selecting those elements which can be identified by chemical tests alone, and has included in addition an account of the reactions and properties of a considerable number of organic and inorganic compounds not already described in the earlier part of the book.

Sound: an elementary text-book for schools and colleges. By J. W. CAPSTICK, M.A. Second edition, with an additional chapter on the application of Acoustical Principles to Military Purposes. With 122 text-figures. Crown 8vo. 7s 6d. Cambridge Physical Series.

Modern France. *A Companion to French Studies.* Edited by ARTHUR TILLEY, M.A. With 12 plates. Demy 8vo. 35s net.

This book is intended to be a companion volume to Mr. Tilley's **Medieval France**, recently published, 25s net.

"Of whatever the student be in search he will find here, if not the thing itself, directions for finding it. Indeed, we do not think there exists any one book of this size which will provide us with the same amount of information on medieval England as this on medieval France."—*The Times Literary Supplement on Medieval France.*

English Verse: Old and New.

An Anthology for Schools. Edited by G. C. F. MEAD, M.A., and R. C. CLIFT, B.A., Masters at Aldenham School. Fcap 8vo. School edition, 4s 6d. Library edition, 6s net.

A school anthology, in which the old and the new are boldly associated on an original plan, based on a conviction that there is need for a collection of poems of direct appeal, drawn from ancient as well as modern sources, between the covers of a single book.

Chaucer: The Prioress's Tale and The Tale of Sir Thopas. Edited by Miss L. WINSTANLEY, M.A. With introductions and notes. Fcap 8vo. 3s 6d. Pitt Press Series.

The original research in this little book is to be found mainly in the Introduction to *Sir Thopas*. In the editor's opinion, there is still a great deal to be done in explaining the relation between the poetry of Chaucer and the historical and social conditions of his age: some hints of how these may affect the *House of Fame* and the *Knight's Tale* are given in Parts I and II, but in the case of *Sir Thopas* she has attempted to work it out in detail.

Stories of Victorian Writers. By Mrs HUGH WALKER. With 8 illustrations. Crown 8vo. School edition, 3s 6d. Library edition, 5s net.

The aim of this little volume is to induce those readers—whether young or old—who are not already familiar with the great Victorians to seek at least a bowing acquaintance with them and their works.

Ecclesiastes. In the revised version. Edited by A. LUKYN WILLIAMS, D.D. New edition. With introduction and notes. Fcap 8vo. 6s. (Cambridge Bible for Schools.)

Sir Thomas Browne: Religio Medici. Edited by W. MURISON, M.A. With introduction and notes. Fcap 8vo. 4s 6d.

In editing *Religio Medici* I have had three aims especially in view: first, to make clear Browne's numerous Biblical and classical allusions and quotations to a century less familiar than Browne's was with the Bible and with Greek and Roman authors; next to illustrate *Religio Medici* by means of passages from Browne's other works; and to explain as precisely as possible strange words and phrases. —*From the Preface.*

Herodas: The Mimes and Fragments. With notes by WALTER HEADLAM, Litt.D. Edited by A. D. KNOX, M.A. With a plate. Demy 8vo. £3 3s net.

The editor's aim has been partly to produce a complete edition, partly to give as fully as possible the results of all Dr Headlam's researches. A great many of the notes which are printed here are as Dr Headlam left them; a large number of the remainder have been written by the present editor, together with text, translation, critical notes, and indexes.

The Student's Handbook to the University and Colleges of Cambridge. Twenty-first edition, 1922-23. Revised to June 30, 1922. Crown 8vo. 7s 6d net.

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

stress." Would it not have been better to have prefaced the article on Elastic Constants with a brief description of such fundamental matters? It is true there is a separate article on the Theory of Elasticity, but the reader in search of information on a specific point does not wish to have to read a long article to gain his end.

The only other criticism we have to make is with regard to the references to original papers. Some of the contributors give full particulars as to where further information is to be found, either in books or in scientific journals, but in certain articles very little information of this kind is supplied. The use of Roman numerals to indicate the volume of a scientific journal seems to be a retrograde step, the continental method of employing Arabic figures in a distinctive type is much to be preferred. These, however, are only minor criticisms, and serve but to emphasize the high standard which has been reached in the production of this monumental work.

ART.

A History of Architecture on the Comparative Method for Students, Craftsmen, and Amateurs. By Sir BANISTER FLETCHER. Sixth Edition, Rewritten and Enlarged. (42s. net. Batsford.) 932 pages, 3,500 illustrations.

Between the covers of this new edition lie all the greatest countries of the world and the glories of them. Thousands of rare and precious pictures, from pen and camera, make a great Gallery of Architecture, and the text is a world-review of human art expressing itself in its mightiest buildings. Here they unfold, from the ruins of ancient Egypt, of glorious Greece, of triumphant Rome, to the greatest products of Gothic France and England, the Renaissance of Italy and Spain, the mysterious Temples of the East, and the materialism of sky-scraping office-buildings in the West. Tomb and temple, cathedral and castle, mansion and manor house, and the humbler timbered homestead—they are all here. Sir Banister Fletcher's "History of Architecture on the Comparative Method" has long been a standard work, with a world-wide reputation. The new edition is a triumph of knowledge, thought, and labour. Re-written, re-illustrated, and reconsidered in the light of the latest discoveries, the new edition has two hundred more pages and one thousand five hundred more illustrations than the previous issue. It is, indeed, the greatest work on the history of the greatest art. The book indicates the influence of geography, geology, climate, history, and religion upon the Art of each country. Its maps, examples, and descriptions; its comparisons and contrasts; its bibliography, glossary and index, summarize the subject. This book is not a volume, but a library; not a collection of views, but a salon of all the ages and all the world of architecture. There is no one (and especially there is no educationist) to whom the history of Architecture is unimportant. In the words of Sir Banister Fletcher himself, "Architecture, which chronicles history in stone, has not hitherto been assigned its proper place in education. It is essentially a human art, as well as an affair of material. Architecture supplies a key to the habits, thoughts, and aspirations of each period, and without a knowledge of the art history lacks that human interest with which it should be invested. The institution of a Diploma in the History of Art by the University of London is an important step in assigning to architecture and the allied arts their right place in the study of the humanities."

DRAMA.

Seneca and Elizabethan Tragedy. By F. L. LUCAS. (7s. 6d. net. Cambridge University Press.)

Mr. Lucas has done a service to literature in the timely publication of this scholarly work, which will also be read with interest, not only by the student of the drama, but by the general public, or at least such of the general public as ever read any thoughtful work. The language is in places a little obscure, but always spirited, though words like "philosophicalness" (p. 22), "academicism" (p. 27), "Schopenhauerianism" (p. 47), do not add to its effect. "Chineseries" (Chinoiserie) (p. 65) is rather a welcome novelty. Mr. Lucas seems to have no doubt of the authenticity of six of the ten plays usually attributed to Seneca, and these he considers furnished "the skeleton frame-work to which Marlowe and Shakspeare were to give flesh and blood and life." Of the five chapters, the fourth, "Darkness and Dawn," forms the kernel of the book, for in its thirty pages are traced the sources of Elizabethan drama down to the final union of the Classical with the popular stage. Ingenious and convincing reasons are suggested why Seneca,

himself not a great dramatist, and whose works were not adapted to, or, indeed, intended for the stage, should have had so great an influence upon the Elizabethans. The violently rhetorical speeches, the rage and bluster, the exaggeration both of horrors and of epigram, all appealed to an intellectually crude audience, yet the permanent harm done by the imitation of such poor work was less than might have been imagined. "Seneca was near enough to Renaissance exuberance to appeal to it as a model; classic enough when taken as a model to impose upon it a wholesome sense of structure and of style."

EDUCATION.

A Brief History of Education. By Dr. H. M. BEATTY. (4s. 6d. net. Watts.)

Short histories of education, and, indeed, nearly all histories of education, have, as Dr. Beatty says, been distinguished by their dullness and their want of due perspective. Quick's "Educational Reformers," which is not of course a continuous history but a series of biographies, still stands easily first among English books on the subject, on the score of readability, and wisdom in the choice of matter. Dr. Beatty's attempt to give, within the limits of 169 small pages, an idea of the history of education from the ancient Greeks down to Dr. Montessori, is certainly not lacking in boldness. But the attempt was worth making, because the author has studied proportion, and because he has succeeded, where so many have failed, in making the subject interesting.

The Modern Teachers' Series.—*Fundamentals of Education.* By Prof. BOYD H. BODE. (7s. net. Macmillan.)

One of the portents of our time is an organized attempt to put the study of education on a thoroughgoing scientific basis. But science is measurement, and so, besides measuring children's heights and weights, as was done in the last generation, we are measuring, or attempting to measure, their intelligence, their progress, the effects upon them of different methods of instruction, and so on. One hears even of attempts to measure character. The old style which made the study of education a philosophy, and is represented by such names as Plato, Locke, Kant, and Spencer, stands temporarily discredited, partly because of the tremendous development of scientific method generally and partly because philosophy itself in the wider sense was for a considerable period placed under a cloud by science. In fact, we are beginning to forget that the biggest things in education are the things that cannot conceivably be measured, and so our educational conferences and our pedagogic literature are largely given over to things of relatively small importance. Prof. Bode does well to remind us that in the emphasis upon statistics, methods, and measurements, the significance of ideals has become obscured. "There is," he truly says, "a danger of overlooking the big issues in fatuous admiration of our achievements in detail. Unless we know where we are going there is not much comfort in being assured that we are on the way and travelling fast." We are glad to have had the opportunity of reading Prof. Bode's timely protest, which is marked equally by adequate learning and by sound sense. If teachers are wise, his book will not prove a voice crying in the wilderness.

ENGLISH.

Training in Literary Appreciation: An Introduction to Criticism. By F. H. PRITCHARD. (2s. 6d. Harrap.)

To estimate a book or a poem at its true worth is no easy task; and to give reasons for such an estimate is still harder. Literary appreciation is, in fact, one of the most difficult subjects to impart, particularly to younger pupils. Yet it is important that all readers should have some measure of literary appreciation, not only that they may be able to distinguish what is good from what is merely mediocre or even worthless, but also that they may thoroughly understand and enjoy to the full what they read. For these reasons, a book like this, which attempts to analyse in a systematic way the qualities to be sought in literary work, will be welcomed by teachers and will be of service to older pupils in schools and colleges. There is here much that is helpful and much that is suggestive to the earnest reader. Among the more formal qualities treated are: rhyme, rhythm, assonance, consonance, contrast, figures of speech, and forms of verse. The chapter on words and letters—including the sound-effects produced by certain vowels and consonants—is well worth study, though it is a matter of opinion whether, or to what extent, the greater writers consciously employed such devices. The chapter on personality and style is very sound, and nothing is better than the last paragraph, which claims sincerity as the touchstone of all true literature. The hints on illustrative reading should prove

(Continued on page 676.)

from the Middle of the Sixteenth Century. By JOHN E. MORRIS, D.Litt. Third impression. With 8 maps. 5s 6d.

Europe in the XIX Century, 1815-1914.

By the same author. With 8 maps and 3 pedigrees. 5s 6d.

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

most useful to students, and many of the exercises are of a novel type, though it is doubtful whether young people could answer some of the questions at all adequately.

The Story of Dr. Johnson: Being an Introduction to Boswell's Life. By S. C. ROBERTS. (2s. 6d. net. Cambridge University Press.)

The author of this interesting little compilation suggests, in his preface, that its usefulness will be judged largely by its power to induce a young reader to take up Boswell with enjoyment later on in life. No doubt, in many instances, this desirable object will be attained; but even if it is not, there are many boys and girls—and indeed adults—who may never have the opportunity of reading Boswell in his entirety, who will nevertheless profit by a study of this book. It gives, largely in Boswell's own words, a clear picture of the great Doctor, his work, and his circle of friends, and also, incidentally, an insight into the life and customs of the eighteenth century. Amid much that is interesting, the familiar stories of Goldsmith and Reynolds and the account of the Tour to the Hebrides will probably be the most attractive to young readers.

The Works of George Meredith. Mickleham Edition. The Egoist: A Comedy in Narrative. The Ordeal of Richard Feverel. A History of a Father and Son. (5s. net each. Constable.)

These are the first volumes of a new pocket edition of Meredith's works, in large type and with green cloth binding, at least as pleasant to handle and read as the old red edition dear to many of us, though we miss the autograph, with its half-Greek characters etched out like Meredith's own style, which made that edition distinctive. Amongst those now entering into their inheritance in the wide estate of English literature, this edition should be as popular as former editions have been with their predecessors.

GEOGRAPHY.

A Commercial Geography of the British Empire. Eleventh Edition, Rewritten. By Prof. L. W. LYDE. (3s. 6d. Methuen.)

This is the eleventh edition of a Geography which was first published in 1893. As a result of changes due to the war, Prof. Lyde has revised the various chapters very thoroughly and has added much new matter in order to bring the work up to date. As in the earlier editions, the book consists of two parts (a) an introduction which treats of general principles, and (b) the application of such principles to the larger areas of the British Empire. Although so much trustworthy information has been compressed into 136 pages, the descriptions and explanations are always well expressed and interesting both to the student and to the general reader.

Nisbet's Geography Class Books.—*The World: Transport and Trade.* By W. J. WESTON. (Paper, 10d.; Cloth, 1s. 1d. Nisbet.)

This little Geography, forming one of a series of class books, deals with the conditions under which raw materials are produced, the routes by which goods are transported, and the centres where they are manufactured. All the examples are well chosen and the lessons are written on modern lines.

The New World Geographies.—Oxford University Press. Book I. *Woods, Fields, and Sea.* 1s. 8d. net. Book II. *Over Land and Sea.* 1s. 10d. net. Book III. *The World and its Wealth.* 2s. net. Book IV. *White Man's Lands.* 2s. 4d. net. Book V. *Regions and Nations.* 2s. 8d. net. Book VI. *Britain and British Trade.* 2s. 8d. net. All by H. PICKLES.

The six books in this series, printed in very clear type and well illustrated with maps and wood cuts, provide an excellent course for the lower and middle forms in secondary schools. The series has been designed to cover the three stages set forth in the Board of Education's suggestions for the Teaching of Geography (Circular 834). In the first two books the author rightly associates geographical principles with nature study, his references to birds and bird migration being particularly interesting and instructive. In No. III. the more important physical features of the world and their influence on man's activities are described, and in No. IV. the British Isles, the United States of America, and the chief parts of the British Empire are dealt with at some length. In No. V. certain parts of the world are selected for regional treatment, and the last volume gives a fairly detailed account of the British Isles as regards production, manufactures, and trade. This series of Geographies deserves to be well known, because the subject matter is arranged on somewhat original lines, the lessons are clearly and simply described, and the human factor is emphasized throughout the six books.

Phillips' Comparative Wall Atlases. Edited by Dr. J. F. UNSTEAD and E. G. R. TAYLOR. *United States Set of Eight Maps* Size of each map, 43 in. by 33 in. With Explanatory Handbook. Folded, dissected, and eyeletted in case. (47s. 6d. net.)

This set comprises eight maps of the United States of America showing respectively relief of land and communications, temperature, summer climate, winter climate, natural vegetation, political and economic conditions, density of population, commercial development. The series forms a logical sequence of cause and effect and the correlation of one distribution with another. For class teaching these maps are in many respects more useful than school atlases, as the teacher can be sure that every pupil is following the course of the lesson and no time is lost while a slow boy is searching for something in his atlas. The special features of each map are boldly printed, other features are indicated with light shading, and names are printed in grey. It is also an advantage to have isotherms and isobars shown on separate sheets; on the temperature map the isotherms are drawn across the orographical features so that elevation can be considered in relation to differences of temperature, and on the summer and winter climatic maps the isobars can be studied in connexion with prevailing winds and rainfall. The density of population map brings out very clearly the contrast between the densely populated areas of the north-east and the scantily populated areas in the west. The maps whether folded or on rollers can be bought singly, but teachers are strongly recommended to buy the set as, for a systematic course of lessons, the whole series will be found invaluable.

Tides and Tidal Streams: A Manual Compiled for the Use of Seamen. By Commander H. D. WARBURG. (8s. 6d. net. Cambridge University Press.)

Considering our position as a seafaring nation and the importance from an economic point of view of an exact knowledge of the height of the tide at a given place and time, it is amazing that the methods of calculation taught officially, both in the Royal Navy and in the Mercantile Marine, are of such a primitive character. The lunar semi-diurnal tide is, roughly speaking, the dominant tide round the British coasts, and with true insular prejudice or ignorance it is apparently taken for granted that the tides all over the world resemble ours. As the author points out, in many places the diurnal tides are equally important, and thus the official methods of calculation produce grotesquely inaccurate results. The only really satisfactory method of predicting tides is that based upon the combination of the various harmonic components, but the harmonic constants required are not yet published in the Admiralty Tide Tables nor in any official tables except those of the Netherlands East Indies. The object of this book is to explain the various methods of tidal prediction with the hope that it will lead to the adoption of the more accurate methods. The main work involved is the determination for each port of nine tidal constants corresponding to the principal component tides. The matter is one in which our country should take the lead.

HISTORY.

The Study of American History. By Viscount BRYCE. (3s. 6d. net. Cambridge University Press.)

The founding of the George Watson Chair of American History is a curious and interesting event in the academic world. The chair is endowed with £20,000: is not to be a fixed seat located at any one university, but a sedan—or bath—chair capable of motion. The occupant for the time being—and the period of occupancy will be short—will travel round the universities delivering peripatetic lectures on Anglo-American relations and similar topics. It is a scheme of doubtful utility. The oratorical efforts of the chair-man are likely to vanish into thin air. After a few years the subjects of public eloquence will tend to be exhausted. It is regrettable that Sir George Watson did not use his generous gift to encourage more permanently effective work. Lord Bryce's lecture inaugurates the George Watson. It is an example of the best that can be done in the circumstances. An able and balanced summary of American history is followed by amiable remarks on Anglo-American unity, and on the hopeful influence of the English-speaking peoples in the world.

Tudor Constitutional Documents, A.D. 1485–1603. With an Historical Commentary. By Dr. J. R. TANNER. (37s. 6d. net. Cambridge University Press.)

For nearly forty years Dr. J. R. Tanner has edited and at the same time amused successive generations of Cambridge historical students by his lectures on the modern English Constitution. He has taken them to the original sources, and he

has shown an unerring judgment in directing them to fountains of delightful language and streams of unconscious humour. It is much to be hoped that now Dr. Tanner has retired from his office as teacher he will give his oft-refined orations to the press. Meantime let us be thankful for the invaluable collection of documents which he here presents to us. They furnish us with the very foundations of his disquisitions on the Tudor period. They are chosen with consummate skill, by a master who knows the whole range of the legal literature from which they are drawn. Moreover, they are accompanied by adequate commentaries which not only explain why each extract has been chosen, but what is the precise point which it is intended to illustrate. The principal subjects which Dr. Tanner deals with are (1) the ecclesiastical settlements, (2) the organs of government, (3) the courts of law, (4) finance, (5) treason. Excellent tables and indexes make the mass of material manageable and easy of reference.

A Primer of Social Science. By Dr. R. JONES. (4s. Constable.)

Dr. R. Jones, favourably known as the author of a history of Europe and the British Empire "Since Waterloo," has in the volume before us ventured to enter the sphere of political theory, and to write a short text-book, the object of which is to help to convert the man in the street into the citizen. He treats of man as a social being, of the State, of parliament, of nationalism and internationalism. From Dr. Jones the would-be citizen will learn the rudiments of most of the social theories of the day.

MATHEMATICS.

Elementary Analysis. By Prof. C. M. JESSOP.
(6s. 6d. net. Cambridge University Press.)

This is a course of elementary plan co-ordinate geometry and the calculus intended for the use of students in their first year at college. The treatment may be described as safe and sound, adhering to well-established orthodox lines, and for this very reason the book will probably commend itself to a very large number of teachers.

Pitman's Commerce Series.—*Arithmetic of Commerce.*
By P. W. NORRIS. (5s. net.)

The introductory chapter contains a brief summary of the arithmetical and simple algebraical processes which can be used in commercial calculations. The instruction given in the later chapters is arranged with reference to the methods under which commerce is conducted, and the principles involved are illustrated by numerous fully worked examples, together with sets of exercises for the pupil. An interesting and noteworthy feature is the prominence given to the employment of decimals in performing calculations involving money. This cannot fail to have a good educational influence upon our men of business.

Plane Geometry for Schools. Part II. By T. A. BECKETT and F. E. ROBINSON. (5s. Rivingtons.)

This part consists of three sections each followed by an appendix containing some of the more advanced theory required by specialists. The first section deals with rectangles, and its appendix with such matters as Radical Axis, Medial Section, and the Circles related to the triangle. The second section and its appendix treat of Inequalities and Maxima and Minima, while the third is devoted to Ratio and Trigonometry, the appendix containing the fundamental propositions on Similarity, Inversion, Pole and Polar, Anharmonic Ratio. This is the first elementary geometry in which we have seen a detailed proof of what may be called the negative of Ptolemy's Theorem. It may be noted that a simple proof may be obtained by inversion. The note on the three famous problems of antiquity is not altogether happily worded. It is more than a mere supposition that the solution by construction with ruler and compass is impossible. The impossibility admits of rigorous proof.

Chambers's Seven-Figure Logarithms of Numbers up to 100,000.
Edited by J. PRYDE. (2s. 6d. Chambers.)

In response to requests received from teachers of Higher Arithmetic in commercial schools for a handy volume of logarithms at a moderate price, Messrs. Chambers have issued separately the seven-figure logarithms of numbers up to 100,000 contained in their well-known "Mathematical Tables." In such a book accuracy is essential, and we would therefore call the attention of the publishers to the fact that in a few places the figures are rather faint or imperfect; in the copy sent to us it is difficult to see whether two figures near the bottom of page 57 are 9's or 0's. We commend the enterprise shown in rendering more widely available such a valuable set of tables.

MISCELLANEOUS.

The Johns Hopkins University Circular: University Register, 1921-1922. With Announcements for 1922-1923. New Series, 1922. No. 1. Whole No. 335. (The Johns Hopkins Press, Baltimore.)

When, about fifty years ago, Johns Hopkins, a merchant of Baltimore, assigned the greater part of his estate to found a university, he could hardly have foreseen the rate at which his foundation would grow. Whilst the original endowment was 3,000,000 dollars, so great is the munificence of rich America towards education that the assets of the Johns Hopkins University are now worth more than 15,000,000 dollars. It is not, however, the swelling of its money bags but its zeal for learning that gives an academy attractiveness and fame. What of this the Baltimore institution has, the present Circular, or Calendar, shows. Its 352 professors (some of them world-famous), assistant professors, and instructors plough the whole field of knowledge; its students are drawn from China and Japan, as well as from many States of the Union. We look for some characteristic or notable features of it. It has courses on Public Speaking. Its Officers' Training Corps is designed as a reservoir of trained men, fit for service as officers in the event of war. Its special College Courses assist teachers to degrees and to personal culture. Open to students in its School of Engineering are no fewer than 129 scholarships. Besides stimulating research in many branches of science, it testifies to the interest of the United States in the past by publishing the excellent *American Journal of Philology*. A study of the Circular makes us wish in all sincerity that the university modestly set up by Johns Hopkins "for the promotion of education in the State of Maryland," and developed since so nobly, may flourish long. Not in academic circles is there any jealousy between Britain and the United States—two bearers of the same culture.

PHILOSOPHY.

The Meeting of Extremes in Contemporary Philosophy. By B. BOSANQUET. (8s. 6d. net. Macmillan.)

This amazingly ingenious book leaves the reader panting at its close. In the earlier chapters the criticism is perhaps too detailed: the reader is apt to lose his way among the numberless citations from different works by a few distinguished writers. Prof. Alexander's name seems to occur with unnecessary frequency. But as the book progresses, matters clear up, and the reader is reluctantly compelled to admit that, after all, his labours at the beginning were necessary to secure the necessary grasp of the big underlying principle that gives a certain unity to the volume. The nature of the author's thesis necessitates a continual opposition of apparently contradictory views, and in most cases a very satisfactory resolution of the contradiction follows. This applies to the smaller matters as well as to the greater, as illustrated by the two views about the relative interest of the pre-Kantian and the post-Kantian philosophy. Perhaps the most generally interesting chapter is that on the ontological argument in the form it has assumed in these latter days, though the chapter with the characteristic title $7+5=12$, shows up the author's brilliant logical power in a fascinating way. Prof. Bosanquet frankly admits that he does not feel quite at home in the higher mathematical stretches, so one cannot but admire the deft way in which he has dealt with the new relativity. Even this terror to the non-mathematical philosopher is here brought to heel, and is put in its proper place in the higher unity towards which the whole argument points. It would be out of place in a brief notice like this even to attempt to decide among the claims of the various philosophies. The author has kept the balance admirably among them, and has brought them all to the bar of experience in such a way as to earn the gratitude of all his readers, not excluding those who have a strong bias towards the severely practical.

SCIENCE

Examples in Optics. Compiled by Dr. T. J. I'A. BROMWICH. (2s. net. Bowes.)

Teachers of geometrical optics may find the selection of sixty questions compiled by Dr. Bromwich most useful—not merely in their classes, but as suggesting other problems. For the most part, the questions have a practical bearing, and are not mere "academic" exercises. The application of Question 25 in practice may cause unpleasantness: "A glass globe ($\mu=3$) rests on a horizontal table covered by a cloth. Show that the globe is most likely to burn the cloth when the sun's inclination is nearly 42° ." The questions vary very much in difficulty, some being almost absurdly easy in comparison with the more advanced problems.

A Text-Book of Hygiene for Training Colleges. By MARGARET AVERY, B.Sc., M.R.San.I., Vice-Principal of Warrington Training College. With 100 Illustrations. 7s. 6d.

"Interesting, instructive, and thorough."—*Schoolmaster*

METHUEN & CO., LTD., 36 Essex Street, LONDON, W.C. 2

First Books of Science.—A First Book of Applied Electricity.

By S. R. ROGER. (2s. 6d. Macmillan.)

This is one of the publishers' series of "First Books of Science," and gives an account of electricity and its applications. That the account is brief will be seen from the fact that, after taking the reader through the preliminary stages, alternating currents, telegraphy, telephony, discharge through gases, electric waves, and wireless telegraphy are all dealt with, the whole occupying 125 pages. It is an attractive little book, and will appeal to those who wish to make a rapid review of the subject. There are certain errors which should be eliminated, as the value of the book would then be enhanced. Thus, specific resistance is correctly defined on page 11, but on pages 12 and 13 it is spoken of as being in microhms per cubic centimetre, although it is not a matter of volume, but area/length. Again, on page 27, residual magnetism is given as the remaining value of B , instead of I ; and on page 28 the hysteresis work is stated to be represented by area on the B/H curve instead of the I/H curve. The definition of unit current on page 36 requires clearing up, as it is not "the force exerted by a current on a turn of wire," &c. With these slips put right, the book should serve a very useful purpose.

BOOKS OF THE MONTH.*Art.*

Expressionism in Art: Its Psychological and Biological Basis. By Dr. O. Pfister. Authorized Translation by B. Low and Dr. M. A. Mügge. *Kegan Paul*. 6s. 6d.

TEACHERS REGISTRATION COUNCIL

REPRESENTATIVE OF THE TEACHING PROFESSION.
CONSTITUTED BY ORDER IN COUNCIL, 29th FEBRUARY, 1912.

TEACHERS ARE REMINDED THAT THE PERMANENT CONDITIONS OF REGISTRATION ARE NOW IN FORCE. ALL APPLICANTS FOR REGISTRATION ARE REQUIRED TO PRODUCE EVIDENCE OF ATTAINMENTS, TRAINING IN TEACHING, AND EXPERIENCE AS PRESCRIBED BY THE COUNCIL.

For a limited period the requirements as to Training in Teaching may be modified in special cases. There is now no Minimum Age Limit, and the present fee for Registration is a single and final payment of two pounds.

Those who cannot satisfy the conditions prescribed by the Council for admission to the official Register of Teachers may apply to be admitted to the OFFICIAL LIST OF ASSOCIATE TEACHERS which is now maintained by the Council. Admission to this list is intended to serve as a preliminary to full registration.

Over 73,000 Teachers have applied for Registration.

Teachers who are not already Registered should apply at once for particulars and a form of application, which may be obtained from

The Direct Route to Examination Success

A splendidly rich field is opening up to those who pass the examinations of

London Matric. and B.Com.

B.Com. (Lond.) is essentially a modern business degree, and the Metropolitan College intensely practical training courses enable any ambitious man or woman to obtain it by spare time study at home.

At the March, 1922, Intermediate examination, less than half the successful candidates were prepared by oral training centres, and of the balance no less than 45 per cent were coached by the Metropolitan College. The moderate fees are payable by instalments if desired, and coaching until successful is guaranteed.

To learn all about the College and its work, and the highly qualified Tutorial staff, write now for the **FREE GUIDE—a handsome 132-page illustrated volume** packed with valuable information. Your name and address on a post card is sufficient. Do not waste the winter evenings, but write to-day

METROPOLITAN COLLEGE Dept. 490, ST ALBANS.

The London School of Dalcroze Eurhythmics,

THE JOURNAL OF EDUCATION AND SCHOOL WORLD BOUND VOLUME FOR 1921.

The Price of this Volume is 12/-. Binding Cases, 4/-.

Certain of the previous volumes can still be obtained: 1918, price 12/- each. 1917 and earlier dates price 10/6 each.

A list of those in stock will be furnished on application to the Publisher.

Binding Cases: 1921, 1920, 1919, and 1918, 4/- each; for 1917 and previous Years, 2/6 each.

"The best record of English Educational Thought and Practice."

—MONROE'S CYCLOPÆDIA OF EDUCATION

"Continues to occupy the premier position. It has unrivalled facilities for learning what is being transacted behind the scenes, and its columns are open to every shade of opinion."

—THE OXFORD MAGAZINE

"The first in this country to devote itself to the work of Education as a whole, without regard to any particular sect or society. It numbers among its contributors a more brilliant group of scholars, perhaps, than any similar periodical."

—THE PALL MALL GAZETTE

London: MR. WILLIAM RICE, Three Ludgate Broadway, E.C.4.

Cambridge University Press

RECENT PUBLICATIONS

Studies in the French Renaissance.

By ARTHUR TILLEY, M.A. With 8 plates. Demy 8vo. 21s net.

A collection of Studies on, The University of Caen and the Renaissance; The Prose Romances of Chivalry; Rabelais and Geographical Discovery; Rabelais and Henri II; Rabelais and the Fifth Book; Humanism under Francis I; A Paris Bookseller—Galliot Du Pré; Dorat and The Pleiade; "Follow Nature"; Montaigne's Interpreters; Some Pamphlets of the French Wars of Religion; Note on Dorat.

Supplement to A Manual of French Composition.

By R. L. G. RITCHIE, M.A., and J. M. MOORE, M.A. Demy 8vo. 6s net.

This supplement to the Manual is intended to meet the wants of teachers who have worked through the Passages for Translation. The two hundred additional pieces here printed have been selected on the same principles as those in the Manual, and are arranged in the same way.

The Principle of Relativity with

applications to Physical Science. By A. N. WHITEHEAD, Sc.D., F.R.S. Demy 8vo. 10s 6d net.

This work is an exposition of an alternative rendering of the theory of relativity. It is divided into three parts. Part I is concerned with general principles and may roughly be described as mainly philosophical in character. Part II is devoted to the physical applications and deals with the particular results deducible from the formulæ assumed for the gravitational and electro-magnetic fields, and Part III is an exposition of the elementary theory of tensors.

Select Naval Documents.

By H. W. HODGES, M.A., F.R.Hist.S., and E. A. HUGHES, M.A. With 4 plates and 4 illustrations. Large crown 8vo. 8s 6d net.

"A valuable compilation of documents, often drawn from sources quite inaccessible to any but technical specialists. . . . Serviceable both to students and general readers."—*The Scotsman*.

The Jacobites and the Union.

Being a narrative of the movements of 1708, 1715, 1719. Edited by CHARLES SANFORD TERRY, Litt.D. With 3 illustrations and a map. Large crown 8vo. 10s 6d net.

The Forty-Five.

A narrative of the last Jacobite Rising. By the same editor. With 8 illustrations. Large crown 8vo. 8s 6d net.

In these two books Dr Sanford Terry has constructed out of contemporary materials a full narrative of Jacobite effort at the four periods of its activity—in 1708, 1715, 1719, and 1745. "Only in the language and from the outlook of those who took part in it or watched its unfolding," he says, "is it possible to recover the romantic atmosphere which irradiates the story. With no more than a connecting word here and there I have let the actors in it tell its incidents in their own way, piecing their prose so that it reads as a consecutive narrative. I venture to think it the fullest and most vivid account of the events it records."

Cambridge Geographical Text-books: Senior.

By G. F. BOSWORTH, F.R.G.S. With 71 illustrations and 29 maps and diagrams. Crown 8vo. 7s 6d. In sections: Europe, 1s 8d. Asia, 1s 6d. Africa, 1s 6d. Australasia, 1s 3d. America, 1s 8d.

Cambridge Plain Texts: English.

Pott 8vo. 1s 3d each. Additional Volumes:—Bacon: *The Advancement of Learning*, Book I. Hooker: *Preface to the Laws of Ecclesiastical Polity*. Montaigne: *Five Essays*, translated by John Florio.

Lycurgus.

The Speech against Leocrates. Edited by A. PETRIE, M.A. Fcap 8vo. 5s 6d. Pitt Press Series.

The *Leocrates* of Lycurgus forms, in many ways, an excellent introduction to Attic oratory for younger students. It is easier than Demosthenes, and there is no complex political situation to expound: the issue is simple and direct. And it has a greater variety of interest than either Demosthenes or Lysias.

Readings in English Social History

from *Contemporary Literature*. Edited by R. B. MORGAN, M.Litt. Vol. V. 1688-1837 A.D. With 14 plates. Crown 8vo. 4s.

"Any one who will read this little volume through with attention and look carefully at the well-chosen illustrations provided, will certainly build up in his mind a lively picture of sixteenth century England, so vigorous alike in soul and body."

Notes and Queries on Vol III.

"We feel sure that teachers of history will be glad to have these books for their pupils' reading."—*The Educational Times*.

The Cambridge Historical Register Supplement, 1911-20.

Crown 8vo. 8s 6d net.

This volume carries forward to the year 1920 inclusive the records which the *Historical Register* brought down to the year 1910: it also contains additional sections on Research Students, Honorary Degrees, Diplomas, and The War. Much of the material for this Supplement is taken from the *Calendar*, in future issues of which it will not reappear.

Cambridge University Calendar, 1922-23.

Crown 8vo. 15s net.

The *Calendar* for 1922-3 and future issues will be considerably reduced in size by the transference of certain historical matter to the *Historical Register Supplement* and by the curtailment or omission of lengthy extracts from the *Ordinances* and other University publications. The chief features of the *Calendar* however, namely information about the Colleges—their foundation, Masters, Fellows, and membership—and the Alphabetical list of Members of the University, showing dates of degrees, will be given in full, as hitherto.

Index to Tripos Lists, 1748-1910.

[Ready shortly.]

For reasons of space it was impossible to include this Index in the *Historical Register*.

The Student's Handbook to the University and Colleges of Cambridge.

Twenty-first Edition, 1922-23. Revised to June 30, 1922. Crown 8vo. 7s 6d net.

The more important additions to this issue of the Handbook are: (1) The New Regulations for the Anthropological Tripos; (2) The New Regulations for the Law Tripos; (3) The New Regulations for the Modern and Medieval Languages Tripos; (4) The Regulations for the Diploma in Education.

Cambridge Pocket Diary, 1922-23.

2s 6d net. With pocket and pencil, 4s 6d net.

Papers set in the Mathematical Tripos, Part I, in the University of Cambridge.

1918-22. 3s net.

OCCASIONAL NOTES.

THE Statutory Rules and Orders relating to the Superannuation Act passed last August are in the main administrative in that they lay down somewhat detailed instructions as to how the

**Superannuation:
Statutory
Rules and
Orders.**

5 per cent contributions from salaries "towards the cost of providing benefits under the principle Act" (ironical phrasing in view of the ratio of cost to benefit) are to be collected. Rule I, however, taken in conjunction with Section 4 of the Act, will modify the meaning of the word salary in a way not yet, perhaps, fully realized by the majority of teachers. Salary in Section 18 of the Act of 1918 clearly meant money received plus (unless disallowed by the Board) "other emoluments." Section 4 of the Act of 1922 explicitly states that the salary upon which pensions and other benefits are based shall be the salary upon which the 5 per cent contribution is paid. Rule I goes a step further and defines a "Standard salary," upon which the 5 per cent will be payable, as the salary "which the Board is prepared to recognize for the purposes of grant." Now, the Board is, in effect, prepared to pay grant only on the minima of the various Burnham Scales. It is quite possible, therefore, for a teacher's salary, as defined for pension purposes, actually to be less than the salary he actually receives. Rule II which makes it compulsory upon employers to furnish written statements as to amounts of deductions and the periods covered will be welcomed by the teachers.

SINCE the 5 per cent contribution, made compulsory by the Superannuation Act of 1922, is payable only by "full-time" teachers, the Board evidently felt bound to consider the question of a definition of "full-time service" applicable to teachers of all types in schools affected by the Acts. It has done this in Circular 1286 which, it is to be hoped, is no more than

**Full-time
Teaching
Service.**

the feeler it purports to be—for the attempt, unless gross injustice is to be inflicted upon a large number of teachers, is an almost certain failure. Common sense, as indeed the practical experience of everyday life in the educational world, says that the man or woman who is at the disposal of the Head of his or her school for the whole of the normal school hours is a full-time teacher. This is eminently true of both elementary and secondary schools and also of the very great majority of technical schools and institutes. It is a perfectly workable definition with the additional merit that, for once, practice marches with theory, since it is essentially to the interest of the Head, whose credit depends upon the efficiency of the school, to see to it that the members of his staff are real full-timers. The number of cases which such a definition would not cover, where elementary and secondary schools are concerned, is negligible. The definition might need extension to cover certain types of technical and art institutions; but even here there is no difficulty which could not easily be overcome by careful drafting of alternative conditions applicable to these special cases.

THE Board, however, has viewed the question from a different angle, that of the number of actual teaching hours per week. Such an attitude would be perfectly comprehensible were industrial employees concerned; painters, or municipal road sweepers, for example. It is scarcely the attitude to take when education is under consideration. The Board to some extent realizes this and, in Circular 1286, proceeds to define teaching as actual teaching plus duties subsidiary to, and entailed by, actual teaching, i.e. specific preparation of lessons (general study is ruled out—quite naturally from the Board's point of view) and correction of exercises. Nevertheless, the admission of the existence of even these subsidiary duties appears to be a concession to hard fact, for the circular makes it clear that, in what the Board will look upon as border-line cases, the evidence called for will be actual teaching hours only. Not one of the other numerous and equally important factors which form so essential a part of modern educational method is even mentioned, still less allowed for as part of a teacher's work, where the ordinary teacher is concerned, though it is, perforce, realized that Heads and, apparently, teachers holding posts of special responsibility, must spend a large part of school hours in organization, and they are, accordingly, excepted from the painter-road-sweeper measure of work. Few teachers will agree that "full-time" can possibly be defined upon a numerical basis.

HOWEVER objectionable the proposals of the Board may be as to full-time service, Circular 1286 contains a recommendation which will be heartily welcomed by one class of teachers at least, namely, those engaged in secondary schools. The Board intends to amend their regulations so as to require formal agreements for all engagements in grant-aided schools. The agreement is to make clear the nature of the duties to be performed, particularly those wholly of a teaching character, the extent of the employer's claim upon the teacher's working hours, the restrictions, if any, put

Agreements.

upon other employment, and the notice to be given on either side to terminate an engagement. Now, in secondary schools which are aided, but not maintained, by local authorities as often as not no written agreements exist at all. The conditions of employment are, as the Board puts it, "left to be inferred from the terms of letters or oral communications, or from the customary practice, often indefinite, of a locality." The only matter for criticism in this section of the circular is a statement that, in the case of a Local Authority, the terms of the engagement may be incorporated in that agreement merely by reference to the published regulations of the Authority in which this information is given. One hopes that, when the Board alters its regulations, it will insist upon these terms being printed in full in the agreement itself. If it will do this, it will render a very real service to the teachers concerned.

THE regulations for Wales do not differ in any important respect from those for England: the same conditions are laid down governing admission to the schools, curricula, fees, and the whole internal organization of the schools. The requirement that pupils should as a rule not exceed twelve

**The Regulations
for Secondary
Schools (Wales).**

years of age on entry to the school will most probably be strongly resisted in the more rural districts of Wales, because in these localities there still exists a tendency to regard the secondary school as a mere continuation of the primary school. Pupils, therefore, often delay their entry to the secondary school until they have reached the age of thirteen and more—a proceeding which hinders their own educational development and upsets the curriculum of the school. A further complication with regard to time-tables and curriculum arises on account of the bi-lingual problem, and the Welsh Department has thought fit to utter a warning against the practice of squeezing into an already well-filled time-table a mere modicum of time to be devoted to the native language, which should in a properly correlated curriculum be regarded as a most valuable educational instrument. The most glaring anomaly in these Welsh regulations is the refusal of the Board of Education to pay more than 7s. 6d. for a first examination and 10s. for a second examination to the Central Welsh Board. These fees were fixed in pre-war days, and it is surprising that the Board of Education persists in allowing the Central Welsh Board, in spite of the greatly increased cost of examinations since the war, only the same scale of fees for its examination candidates. English examining bodies are allowed the full fee of £2, and it is therefore difficult to understand why the Welsh Authority is treated differently.

WE have received a manifesto on State economy from the National Citizens' Union; this deals with the delay in cutting down State expense and, as may be expected, educational expenditure is attacked. The manifesto is sometimes definitely misleading, as is the case in the comparison of the costs of education in 1913-14 and 1922-23 respectively, in the absence of any explanation of the increase. The manifesto calls for a reduction in the number of unnecessary officials at the Board but fails to state who are these unnecessary officials and how many of them should be dismissed. A further claim is that expenditure

**National Citizens'
Union and State
Economy.**

on education should be limited to a sound elementary education upon essential subjects, with provision for continued or higher education, or for vocational training, for such pupils only as show reasonable likelihood of being able to profit thereby. Perhaps the union will define what it means by a sound elementary education and what it considers are the essential subjects. Vague statements of this kind are useless to thinking people. We are as much in favour of wise economy in education as any union of national citizens, but when we are asked to assent to the continued suspension of the 1918 Act, so far as it provides for Day Continuation Schools, even voluntary schools if they entail additional public expense, we begin to wonder whether the aforesaid citizens understand the meaning either of economy or education. We may add that the names appended to the manifesto do not, on the whole, carry much conviction, so far as educational questions are concerned.

THE new issue of the Board of Education's Regulations for the Training of Teachers embodies several important changes, most of which, however,

**Training of
Teachers.**

had already been made known by means of circulars. Tuition grants to the voluntary training colleges remain as in 1921-2, but the maintenance grant is reduced in presumed proportion to the fall in the cost of living. Grants to provided colleges are now separately dealt with, and a note is added foreshadowing an attempt at a more even distribution among the local authorities of the expense of training teachers. The undertaking which students have been required to sign, and which must have been found very difficult to make effective, gives place to a simple declaration that the student intends to be a teacher. After having experimented with the legal undertaking for several years, the Board here returns to its former practice. The Regulations further make it clear that students who have completed a year's course of training for work in secondary or continuation schools will be recognized as certificated teachers in elementary schools. Another Regulation simplifies the machinery for the payment of grants in respect of "further instruction of teachers" beyond the ordinary courses of training. None of these changes are startling, most of them are improvements, but the denominational colleges will not like the reduction of grant.

CIRCULAR 1288 of the Board of Education announces that arrangements have been made, in co-operation with the Institution of Electrical Engineers, for the

**Examinations
for Electrical
Engineering
Students.**

award of certificates and diplomas in Electrical Engineering to students in Technical Institutions. Details of the scheme are to be shown in rules which will be issued shortly, but we presume that it will be directly comparable with the scheme already in operation for mechanical engineering students. Broadly the scheme provides for a national system of internal examinations. Only those Technical Schools and Colleges which have been approved by the Board of Education as being efficient for this purpose may participate, and this ensures in the first place that every candidate who presents himself will have passed through a satisfactory course of instruction. The examination papers will be framed by the teachers at the various schools and they will then be approved or modified

by an assessor who will be appointed by the Institution of Electrical Engineers. It is to be presumed that the assessor will also overlook the teacher's marking of the questions. The merits of the scheme lie in the facts that the students' work is judged, in the first instance, by one who has the opportunity of watching it closely; that the assessor will prevent any unfair verdict arising out of conscious or unconscious bias on the part of the teacher; and that the assessor will be able to maintain a reasonable equality of standard as between different schools whilst yet permitting greater freedom of educational development than could be obtained if a national cast-iron syllabus were being followed. Certificates (for part-time courses) and diplomas (for full-time courses) will be issued jointly by the Institution of Electrical Engineers and the Board of Education on the successful completion of approved courses. We believe that there is some movement on foot to urge that these certificates shall be associated definitely with the means of attaining corporate membership of the Institution of Electrical Engineers—which body, by the way, now holds the Royal Charter.

ONE of the candidates at the recent Senatorial Election in the University of London raised the question of the status of the Principal of the University, who is a salaried officer, arguing that the Principal should be *ex officio* a member of the governing body of the University. Oxford and Cambridge are syndicalist institutions, and the Royal Commission reported against the introduction of the lay outsider into the governing bodies of these Universities. In industrial organizations, directors are paid, and there may or may not be managing directors included among the members of a Board of Directors. The obituary of the late Lord Northcliffe disclosed the interesting fact that when he secured control of *The Times* he insisted that the directors of the company should all be salaried members of the staff. Can it be supposed that the University administrator would be so much pre-occupied with the question of his personal salary as to affect his loyalty or efficiency as a member of the governing body of the University? Universities should act as *éclaircisseurs* to industries on questions of organization and control. At one time Parliament objected to the presence of the salaried Ministers, but the objection was overridden by practical considerations. In the case of the University of London, it is significant that Sir Henry Miers resigned the Principalship in 1915 in order to accept an appointment in a northern University.

IN an incautious moment, a speaker at the Oxford Conference on Adult Education remarked that the ancient Universities would always be expected to provide education for the governing classes. Mr. George Dallas, of the Workers' Union, retorted that the working class were tired of Oxford and Cambridge. "The time had almost arrived when they would provide themselves with an education which would be of an equally high standard." A large section of the working class has always regarded the overtures of the Universities with suspicion, suspecting dope or proselytism. As Emerson sapiently observed, the world is mundane. A University should

be a microcosm capable of providing education for all classes of the community without unduly exciting political and economic animosities.

AN interesting report has recently been presented to the Manchester Education Committee by the Director of Education on the working of a scheme of lectures for elementary school children in museums and art galleries. Separate courses were arranged at appropriate centres in one of a variety of subjects, including Science, History, Geography, Art Appreciation, &c. In all over four thousand children attended from the upper standards of the schools. The value of such work should be more generally recognized than is the case at present when economy seems in danger of becoming the first and last aim of some of our education authorities. It is not enough to provide in our schools formal instruction in prescribed subjects. The child must be given the fullest opportunities of developing his growth so that he may take his part in the service of the community. And for this the whole realm of knowledge must be accessible. Even the most conservative schoolmaster need not fear that what he regards as the vital part of the teaching will suffer; on the contrary the quickening of interest produced by a live system, such as that described, must react favourably on all parts of the school work. Certainly the Manchester teachers who have been concerned with the scheme would appear, from the report, to confirm this view. The pamphlet will repay careful study both as a suggestive piece of work and for the details of organization as well as for the frank expressions of opinion—both for and against—from scholars, parents, and teachers. It is to be hoped that the scope of the scheme will be extended still further—one would like to see included courses of instruction in the Arts and Sciences which have their application in the industrial life of the city; for, after all, it is one of the duties of education "to teach the average man the glories of his work and trade."

A REVISED edition of the London County Council's Scholarships Handbook has been issued, and as so much has been heard of post-war increases in school fees, the Council is naturally desirous that the other side of the case should be put, and that parents and teachers should be made fully aware of the scholarship facilities provided. We are glad to find the Council trying to make it more widely known that any child whose parents reside in the county of London may compete, no matter what type of school he attends. The impression that only children in the Council's own schools are eligible has in the past prevented many London parents from obtaining the assistance of scholarships in educating their children. Details are given as to junior county scholarships and exhibitions for children at the age of eleven, supplementary scholarships awarded at the age of thirteen or fourteen, intermediate scholarships at sixteen or seventeen, and senior scholarships at eighteen or over. The conditions of award of most, but not all, scholarships are governed by the parents' income. If the income falls below a certain amount, maintenance grants, &c., are paid in many cases in addition to fees. Generally speaking, the higher the

Council.

scholarship the higher the income limit, which also varies according to the number of children the parent has to support.

WE are gratified by the compliment paid to us by *The Daily Telegraph*, which, in its issue of October 7, devoted the column headed "Topics of the Hour" to our Summer Prize Competition, or rather to half of it, namely the list of novels, without mention, however, of *The Journal*. The writer of the article does not approve of our Competition. She wants to know why Scott, Jane Austen, Dickens, Thackeray, and George Eliot. Perhaps here we were in fault; we ought to have explained that the object of this was merely to make the problem one of manageable dimensions. But probably most of our readers divined this for themselves. On another occasion we may possibly ask for a selection from the works of the giants, and exclude the rest. Then she criticizes us for omitting the Kingsleys and Trollope, but she does not mention the volumes she would have included. And why Seton Merriman, she says, but not Marryat? Personally we would rather read the latter than the former, and so probably would boys of 14 to 16, but not, we think, young men and women of 17 to 19. But our gravest sin is that we attempted to dictate to young people what they should read. Our reply to this is that the lists were intended as a suggestion to teachers who have to form school and form libraries, that all librarians, except those of the British Museum and the Bodleian, have to select, and that school librarians have usually to begin with a small number of books. The writer of the column might also remember that it is part of the business of teachers to put their pupils on the track of the best books. She has in fact wholly mistaken our aim. She is amazed at people who say that *vin ordinaire* is better than *Chateau Lafitte*. But would she be surprised at people who thought *vin ordinaire* was better for boys and girls?

NO one was more surprised, and agreeably surprised, than the original promoters of the scheme, at the announcement that the purchase of Stowe House was a *fait accompli*. Mr. Montauban and his colleagues did a lot of spade work and propaganda on behalf of the scheme, and they will be well satisfied if their work will help those who have succeeded where they failed. We have little doubt that if a new public school is to succeed anywhere, and we are sure that such a school is needed, it will succeed at Stowe. Any one who has seen the place must have felt that this is a spot already seething with traditions, which in a newly built place would have had to be created artificially. The buildings are magnificent, the situation and surroundings unrivalled. We can imagine a boy of fourteen on arriving at school here, driving under the arch and up the main drive, and getting a first glimpse of his new school, having his breath taken away, and realizing the grandeur of the place in which he is to spend some years of his life. It will not take him many hours to feel that he is part of this place, and to be proud of being a part. We only hope that before these lines appear some generous folk will have come along to save for the place some of the treasures which belong to and should not be removed from the buildings. To have these removed

and replaced by modern horrors would be little short of vandalism. Meanwhile we can only offer our best wishes to Lord Gisborough and his committee, especially in their choice of a Head Master, on whom the success of Stowe School will so much depend.

SO far Mr. H. G. Wells has not favoured his prospective constituents with his considered views on the present University of London. Before the reconstitution of 1900 he was an ardent reformer, publishing critical comments on the defects of the old and now superseded constitution of the University.

One of Mr. Wells's articles, contributed to the now defunct *Pilot*, pictured the old Burlington House and its examinations with their by-product—the cramming institution. But the writer was able to see that the system served a high national purpose, and his conclusion was stated without ambiguity: "Now, whatever else may be changed, that impartial system, I would submit, is not to be changed." Although more than twenty years have elapsed since the publication of this article, there is no reason to suppose that Mr. Wells has altered his opinion on this question. "Hug your forces," George Meredith advises in one of his letters. The University of London would be ill-advised to abandon or compromise this great tradition of impartiality. No candidate for its representation in Parliament who advocated any such retrogressive policy would stand a chance of election.

A RECENT number of *Industrial and Labour Information*, published by the International Labour Office (League of Nations), gives an account of the extent to

Co-operation
Courses in
American
Universities.

which the question of the co-operative movement is being studied in American educational centres. It appears that the United States Bureau of Labour Statistics recently addressed to a number of colleges and universities an inquiry as to whether a course on co-operation is offered to students. Replies were received from thirty of these institutions. In twenty-five co-operation receives attention either as a separate course or in connexion with such subjects as economics, labour problems, marketing problems and methods, farm management and organization, etc. In only seven universities is a separate course in either consumers' or farmers' co-operation offered. The whole subject receives the greatest attention in Columbia University and the University of Minnesota. The former gives a winter course in agricultural co-operation and a spring course in consumers' co-operation, whilst some attention is given to co-operation in another course called "Economics of Food Marketing." The spread of information in this important subject by an international organization is in every way advantageous.

MR. W. H. ROBINSON, President of the National Federation of Class Teachers, chose well-trodden ground when, in his address at the annual conference of the Federation, he discussed the typical business man's objections to the prevailing system of instruction in elementary schools. The arguments are familiar, but it is well that they should be frequently re-stated in popular form. Mr. Robinson quoted the case of a certain town councillor who advocated the

The Teacher
and the
Business Man.

teaching of shorthand in the schools, "instead of subjects that were useless in business life." The said town councillor probably has an office in which boys who have learnt shorthand are obviously useful from the first. He forgets that other kinds of employers would desire, not shorthand, but a great variety of other accomplishments. He forgets, too, that life in a modern civilized state is something more than bread-winning. Mr. Robinson did well to expose to the business world, so far as his words can reach, the fallacy of the councillor's contention, and he did well to quote the introduction to the elementary school code—a document which should be withdrawn if the great parties in the State disagree with it.

IS marriage a profession? Popularly marriage is regarded as the oldest and most honourable profession in the world, though our first parents may not have gone through the accustomed formalities. At a debate at Manchester on the question of the married teacher,

The Married Teacher.

Councillor Anna Lee asserted that women nowadays no longer look on marriage as a profession. The Education Committee, after full discussion, condemned the married woman teacher but without prejudice to existing teachers except in special cases. What Manchester thinks to-day . . . George Meredith in one of his letters animadverts on the contractions of women's undertakings "caused by an exclusive devotion to maternity and domesticity." Sympathy is due to those women who, to avoid this fate, continue during marriage the stimulating, if exhausting, occupation of teaching. But in the last resort the test of what Mr. Gradgrind called "hard facts" has to be applied, and, without dogmatizing or laying down any general principle, we see no reason to question the *bona fides* and impartiality of those who are entrusted with the decision of this particular issue.

THE recent exhibition of school pictures, which the London County Council arranged at the Central School of Arts and Crafts, was followed by a conference, which it is hoped may lead to some concerted action on the part of British artists and publishers. It is agreed

School Pictures.

that pictures are a necessary part of school equipment: but what pictures? For many years the only publications available were black and white plates. Colour processes had not been perfected, or were too costly. Useful pioneer work was done by British firms, notably by Messrs. G. Bell & Sons, who produced the Fitzroy Pictures. A most important advance was, however, made in Germany by a number of artists who collaborated in order to supply good colour pictures at a minimum price. These artists drew directly on the lithographic stone, and were able to supply work of undoubted excellence at one-third the price of British productions. The London County Council held an exhibition of this work in 1906 in order, as Sir Cyril Cobb said, to galvanize the trade in this country into producing something of comparable merit and price. Unfortunately the result was directly contrary to what was expected, for while the British publishers refused to move without definite guarantees from the Council, the Germans, taking advantage of a hint given in the catalogue that pictures of British scenery would be acceptable, produced these at a low price.

WE congratulate the London County Council on again attempting to bring the matter to a definite issue. But while much was said at the Conference about

Artists and Publishers.

the point of view of the publishers, not enough was said of the artist. The cry of the publishers is "Let the London County Council say what are the essentials of a good school picture and they shall have it." But Art cannot be reduced to a formula, and the essentials of a work of art cannot be decided by a committee. This is a case where the supply will create the demand, and the matter rests with the artists, who must also be educationists. There is little doubt that a determined effort on the part of artists and publishers would soon develop into a sound commercial undertaking. The fact that the Underground Railways can sell their posters to schools and collectors at the rate of four hundred copies a month is an indication that there is a demand for work of real artistic merit which the British publishers should make it their business to supply.

WORLD HISTORY COURSE.

By H. A. DAVIES.

THE question of the right lines upon which history should be taught in schools is one of the most perplexing of educational problems; that it has not been well taught in the past is a truism which the experience of the Great War has made more obvious. Broadly speaking, children at school have been trained to regard history as almost exclusively the account of their own country's political development. Even where ancient history has been taught, it has confined itself to the histories of Greece and Rome, and has treated these as more or less detached stories, bearing no apparent relation to civilizations which preceded them, and too often the political aspects of Greek and Roman history—the dreary quarrel between Athens and Sparta, or the details of the Punic Wars—have received far more attention than the permanent legacies of Greece and Rome to the world. No ordered and systematic attempt has been made to represent history as one whole, to teach the peoples of the world that they are all engaged in a common work, that they are all sprung from common origins, and that they are all contributing in different ways towards the general end. And without this, there can be no general peace, no common prosperity; that is the gist of Kant's great treatise on Perpetual Peace; this is beginning to be more generally accepted in the world to-day; it is a *sine qua non* to the effective continuance of such an institution as the League of Nations.

The only argument that can be advanced against the teaching of World History in schools is that consideration of time make it impossible. There would be such a mass of material that no time-table could cope with it, and this mass would go on growing as knowledge secured from excavations or the deciphering of ancient inscriptions accumulated. Only recently, the first volume of a book on the Palace of Minos at Knossos has appeared, a book running to over seven hundred pages, and new facts are constantly being brought to light about ancient Egypt and the civilizations of the river valleys of Mesopotamia. But world history is amenable to a broader treatment than the history of mere nations or periods; it is something more and yet something much less than an aggregate of the histories of nations. It is a record of progress, often hampered by national prejudices or human imperfections, but still persisting in a way which takes much of the edge off what Lord Morley calls the "desolating sentence" of Gibbon, that history is little more than a register of the crimes, follies, and misfortunes of mankind. The art of

writing, the discovery of the alphabet, literature and the drama, science and art, and printing, are not crimes, follies, or misfortunes. An intelligent idea of all these, of the great movements and influences which have profoundly affected humanity, of how one age grows from another and one civilization benefits from that which preceded it, is well within the mental grasp of any schoolboy of average abilities, and it is just the kind of knowledge for which he hankers, consciously or unconsciously. It is as if a new planet has swum into his ken; there is a glamour about world history which is rarely experienced in local or national history, and the necessity for excluding petty details which would render the subject cumbersome and unwieldy, makes for clarity and the maintenance of interest. What boy would not find the story of man's development from the brute, or the Athens of Pericles, or the travels of Marco Polo, more entrancing than the provision of the law *De Donis Conditionalibus*, or the strategy of the Captal de Buch's flank attack at Poitiers? And is it not more important that a boy should know why he belongs to a civilized community, how the world came to possess art, poetry, music, a larger degree of freedom, ships, books, science, and everything else that comprises civilization, than that he should know precisely why it is that George the Fifth is king of England, or why it was that Richard, Duke of York, had a better hereditary claim to the English throne than King Henry the Sixth?

There is, however, no suggestion that the study of world history should take the place of the study of national history; the suggestion rather is that both should be studied, and that some of the time given to profitless consideration of unimportant details in national history might advantageously be given to the larger subject. There are certain events in every country's history which obviously require more detailed attention than what would be given to them in a world history course. Every English boy, for example, should have more than a cursory knowledge of the work of Alfred the Great, who does not loom large in the history of the world; of the deeds of the great Elizabethans; of the growth and development of English literature; of how English freedom, religious and political, has been won; of the changing conditions of English life throughout the centuries. But without some knowledge of world history these things cannot be properly appreciated. In order to understand the work of the Elizabethan explorers, the real magnitude and importance of their achievements, some idea of the work of previous explorers, irrespective of nationality, is necessary. So it is realized how interdependent we are one upon the other, and our own nation emerges, "not," as H. G. Wells has put it, "as an isolated thing, still less as the supreme thing bringing other nations into subjection, but always as the form of collective activity that is indeed nearest to ourselves, and towards which our own actions most immediately contribute, but one surrounded and helped by other nationalities inspired by the same spirit."*

In the *Menexenus* of Plato, the author represents Socrates as meeting his friend Menexenus returning from the Agora where they have been debating the choice of an orator to pronounce an oration over some Athenians who had fallen in the Peloponnesian War. This gives Socrates an excuse for deriding the most blatant form of national pride, "O Menexenus, death in battle is a fine thing. The poor fellow, however poor he was, gets a costly funeral and an elaborate speech by a wise man who has prepared it long beforehand. He is praised for what he has done and for what he has not done. And the speaker so steals away our souls that I, standing and listening, feel myself a finer fellow than ever I have been; and if there be any foreigners present, I am made conscious of a certain superiority over them, and they seem to experience a corresponding awe of me." This kind of feeling is very old, much older than the time of Plato and Socrates, and yet

very modern; it is at the root of all wars, and just as it has been fostered and kept alive by bad history teaching, so it can be destroyed only by a teaching which makes it clear that no one nation has a monopoly of wisdom, culture, or courage, and that we all belong to many countries. A knowledge of world history is the surest corrective of national pride. English people are naturally proud of their great national achievements, but would they have any reason for pride if the Greek civilization had never existed? Much of what we esteem most highly in the modern world—the faculty of appreciating beauty, the love of freedom, the love of truth, even our literature, which is perhaps our chief claim to national eminence, owes its existence very largely to the thinkers of ancient Greece, and they, in turn, were the debtors of Egypt. The greatest age in English history was the age of Elizabeth, but while we can afford to be proud of the deeds of our ancestors of those days, it is as well to remember that, in at least one respect, they were inferior to some of their contemporaries. While English people were being tortured and killed for holding religious opinions other than those of the State, the people of India under Akbar were enjoying complete toleration.

The study of world history can begin at an early age. To delay it until the age of sixteen or seventeen can serve no useful purpose; it is of the utmost importance that the impressions of early childhood should be sound. H. G. Wells suggests that "with the little child, we may begin on stories of interesting characters and heroic achievement quite irrespective of nationality. At this age the notion of country is undeveloped, and we may quite easily lay a foundation in love of courage and strength and goodness, which will recur as a basis in later years for our fuller treatment of man's history as a whole."*

Some interesting characters who may be treated in this way are Cyrus the Great, or Darius, Zoroaster, Pericles, Socrates, Alexander the Great, the Gracchi, Julius Caesar, Marcus Aurelius, Constantine the Great, Justinian, Buddha and Mahomet, Charlemagne, Alfred the Great, Attila, Gengis Khan, the Polos, Haroun-al-Raschid, St. Benedict, Francis of Assisi and St. Dominic, John Wycliffe, Caxton (whose career might be the means of explaining the invention and development of printing), Vasco da Gama, Columbus, Tycho Brahe, Galileo, Martin Luther, Erasmus, Oliver Cromwell, Sir Isaac Newton, Voltaire, George Washington, Napoleon Bonaparte, Abraham Lincoln, and Bismarck. In the cases of characters like Alexander the Great, Attila, Napoleon, and Bismarck, the utmost care should be taken to show the disastrous consequences of their selfishness and lack of scruple, and it would be well to contrast them with characters like Socrates, Shakespeare, and Leonardo, whose achievements are the priceless heritage of all countries and all peoples. This biographical method of teaching history should sometimes be varied. Events like the voyage of the Pilgrim Fathers, the French Revolution, and the great changes which the invention of machinery has effected in the world, do not exactly lend themselves to such a mode of treatment, and they are sufficiently interesting to appeal to the fancy of any child. Again, in seeking to convey an idea of the lives and activities of people in ancient times, lessons hinging around such relics of antiquity as lake villages, or monuments like the Great Pyramid of Gizeh or the Temple of Karnak, would be found useful. The colossal proportions of the Great Pyramid, and the wonders of the Temple of Karnak, which took nearly two thousand years to complete, and was nearly a quarter of a mile long, would awaken the interest of the most unimaginative. The child mind is particularly susceptible to the influence of stories. We still explain some of the facts of English history by such means. The story of the burning cakes helps to explain Alfred's preoccupation with the woes of his country; the

(Continued on page 700)

* "To-day and To-morrow," Vol. III., No. 6.

* "To-day and To-morrow," Vol. III., No. 6.

University Tutorial Press, Ltd.

NEW BOOKS AND NEW EDITIONS.

Banking and Currency. By W. J. WESTON, M.A., B.Sc., Head of the Department of Commerce, the Polytechnic, Regent Street, London, and Lecturer in Economics for the London University Extension Board. 5s. 6d.

This book follows the syllabus prescribed in the subject for the B.Sc. (Econ.) and B.Com. Examinations of the University of London, dealing fully with both theory and practice. Its aim is, by constant reference to what students may be expected to note for themselves, to present effectively the essential facts of our currency system; it seeks to bring the class-room into contact with the happenings of modern life.

Practical Lessons in Book-keeping. By T. C. JACKSON, B.A., LL.B., and WADE HUSTWICK, A.S.A.A. Fifth Edition. 5s.

This book is adapted to the requirements of the Civil Service, Royal Society of Arts, London Chamber of Commerce, &c.

In the fifth edition the text has been thoroughly revised, and the book is now in line with the most progressive ideas in the teaching of Book-keeping. In particular the many excellent suggestions contained in the *Memorandum on Commercial Instruction* (Circular 1116), issued by the Board of Education in 1919, has received the fullest consideration.

The first part of the book is issued separately under the title of *Principles of Accounts*.

A Second Course in Engineering Science. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. 5s.

The book embodies a course of study which is intended to follow that laid down in the author's *First Course in Engineering Science*. The book covers the syllabus for various professional examinations such as the mechanics of the studentship examination of the Institution of Mechanical Engineers and the graduate examination of the Institution of Automobile Engineers.

The recommendations for the second year of the Major Course, made by the Board of Education in their *Memorandum on the Teaching of Engineering in Evening Schools* have been closely followed.

Technical Electricity. By H. T. DAVIDGE, B.Sc., M.I.E.E., and R. W. HUTCHINSON, M.Sc., A.M.I.E.E. Fourth Edition. 12s. 6d.

This standard text-book has been so altered, as to convert it into virtually a new work. The book has been entirely reset, the employment of a larger page, enabling many improvements to be made in subject matter, diagrams, type, &c., and the work to be brought thoroughly up-to-date for modern requirements.

Tutorial Chemistry, Part II. METALS AND PHYSICAL CHEMISTRY. By G. H. BAILEY, D.Sc., Ph.D. Edited by WILLIAM BRIGGS, LL.D., M.A., B.Sc., F.C.S. Fourth Edition. 7s. 6d.

The special object of the new edition of this book has been to include simple accounts of certain subjects in which modern research is making rapid progress. Thus new chapters have been introduced dealing with Colloidal Solution and Adsorption, Atomic Numbers, and Radio-activity.

Practical Physics. By WM. R. BOWER, B.Sc., A.R.C.S., in collaboration with JOHN SATTERLY, D.Sc., M.A. Second Edition. 7s.

A complete manual of the subject up to the standard of University Intermediate Examinations.

The new edition contains a supplement in which some experiments are described that have come into prominence since the first publication of this work, viz. experiments on Friction, Acceleration, Vapour Tension, Thermal Expansion, Thermal Conductivity of Solids, and Critical Angle.

Heat, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. Second Edition. 5s.

A special feature in the new edition is the addition of a chapter on Steam and Internal Combustion Engines. This provides a very elementary account of the subject and deals with first principles only.

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. Second Edition. 3s.

This is a book for beginners. It is well supplied with suitable experiments from which the fundamental principles of the subject are clearly demonstrated. The new edition contains a short chapter on "Animal Heat."

Groundwork of Ethics. By JAMES WELTON, D.Lit., M.A. 3s. 6d.

This book assumes no philosophical training, and is suitable alike for readers whose interests do not lead them to a further study of Philosophy and for those who desire to obtain a preliminary outlook on the subject before proceeding to a deeper study of the questions raised.

A complete Catalogue of Educational Publications post free on application.

legend of Canute and the waves bears testimony to the humility of the Danish king; that of William Rufus's death in the New Forest shows the love for hunting of the Norman kings; the story of the king who never smiled again visualizes the tragedy of the White Ship. World History covers more ground than the history of any nation; hence its stories are more varied and numerous; the careers of many of its great figures are more enthralling than any romance. To take but one instance. Has there ever a finer story been written than the account of the travels of the three Polos in the East through the realms of Kubla Khan, and their triumphal return to Venice, when their shabby garments caused their relatives and friends to regard them with ill-concealed disfavour, until they gave a great feast in the midst of which they sent for their old padded suits and ripped them open, disclosing to the eyes of the astonished company an incredible display of rubies, sapphires, carbuncles, emeralds, and diamonds?

H. G. Wells in the article already quoted suggests that the systematic study of world history should begin "any time after the fourteenth year." Many months before the appearance of this article, the beginning of such an experiment had been made in Leighton Park School. It is only fair to add that the appearance of "The Outline of History" was largely responsible for it. The boys taught are of the average age of about fourteen years. Two lessons a week, each lesson of forty-five minutes duration, are allocated to the subject, and the aim has been to cover the whole course of world history in the space of two years. The first year is devoted to a study of the period from the origin of the world to the fall of the Roman Empire; the second year from that date to the present time. No textbook has been used; the lessons have, on the contrary, assumed the character of talks, the boys sometimes taking dictated notes, but far more frequently writing their own notes and reproducing them in the form of essays. Some of the essays done in this way have been astonishingly good, testifying in the most effective manner to the interest of the subject of world history; it has been quite a common thing to find boys spending as much as an hour of their free time, in addition to the ordinary preparation period of half an hour, to express their ideas on subjects which make a special appeal to them, such as Egyptian civilization, Athens under Pericles, the career of Mahomet, or the journey of Marco Polo. Even the duller boys have shown indications that the subject has made some appeal to them, and while the best boys at English History are almost invariably the best boys at World History, I have noticed that the level of attainment and the interest shown is, generally speaking, higher in the wider subject. May not this be due to the fact that much in the history of any country is stale, flat, and unprofitable, whereas the study of world history must resolve itself into a study of those things which are of permanent significance for the human race? As Prof. Gilbert Murray has expressed it, "the history of the world consists mostly in the memory of those ages, quite few in number, in which some part of the world has risen above itself and burst into flower or fruit," and, again, "Most races and nations during most of their life are not progressive but simply stagnant, sometimes just managing to preserve their standard customs, sometimes slipping back to the slough."*

Good use of maps is obviously necessary in any course of world history. What is perhaps not so obvious is the value of pictorial illustrations. Pictures of the Parthenon frieze, such as those issued by the British Museum authorities, or those to be found in such books as Breasted's "Ancient Times," or the illustrated edition of Wells's "Outline of History," or a portrait such as that of Praxiteles' Figure of Hermes playing with the child Dionysius (facing page 371 of Breasted's "Ancient Times") will help a boy to appreciate the marvels of Greek sculpture much better than any amount of talk on the subject.

* Essay on "The Value of Greece to the Future of the World" in "The Legacy of Greece," pages 12 and 13.

Sometimes, however, pictures do not convey all that we would desire of them. No picture of the Temple of Karnak will convey such an idea of the great scale upon which the old Egyptian sculptors carried on their operations as the bare statements that one room in the temple, the famous Hall of Columns, had a floor area equal to that of the cathedral of Notre Dame in Paris; that the columns were one hundred and thirty-six in number; and that the twelve centre columns, which are seventy-nine feet high, are so colossal that on the top of the capital of each a hundred men can stand at once.

The teaching of World History at Leighton Park is now in its third year. There remain to be considered what I regard as two of its most profitable results—that it teaches boys to appreciate the value of museums, and particularly the British Museum; and that it enables them in a way which would be possible from no course of national history to realize and apply the great lessons of history. It has always been my endeavour to make as much use of the British Museum as possible. I have, I hope, made it clear what a wonderful pictorial record of the world's history the museum is. I have often found that it adds to the interest of a lesson to refer boys to exhibits which are to be seen there, and a subsequent visit to the Museum is likely to have far more profitable results than if it had not been preceded by some study of the early history of man on the earth. To boys who have some knowledge of world history Egyptian mummies, rolls of papyrus, people buried with grain and weapons, Assyrian winged lions, Athenian sculpture, are not mere objects which excite wonder or curiosity; they are visible expressions of bygone ages in which their interest has been kindled. For precisely the same reason, the study of world history stimulates the desire for travel, and renders it of greater value and interest; a great relic like the Parthenon becomes something more than "a superstition and a name echoing from the caves of fame."

There is a wonderful parallelism about history which we sometimes denote by saying that history repeats itself. What it really amounts to is, that the same causes always produce the same effects. What is bad for progress in one age is likely to be bad in another. The present condition of the world is due to the fact that this has been very imperfectly apprehended. Wider knowledge of the consequences of the Treaty of Vienna might have saved us from the recent Treaty of Versailles. A military empire, whether it is ruled by ancient Assyrians, Napoleon, or the Kaiser Wilhelm II, is doomed to ultimate extinction. Disunion has the same consequences whether found in ancient Greece, medieval Germany, or modern Russia. These and suchlike lessons are the legacies of the past to the present, legacies which it is the function of world history to inculcate, and without a general acceptance of which there can be no hope of a happier world—"Our ancestors are mere dust and ashes, save when they speak to our posterity; and then their voices resound, not from the earth below but the heaven above. There is an eloquence in Memory because it is the nurse of Hope. There is a sanctity in the Past, but only because of the chronicles it retains—chronicles of the progress of mankind—stepping stones in civilization, in liberty, and in knowledge. Our fathers forbid us to recede—they teach us what is our rightful heritage—they bid us reclaim, they bid us augment that heritage, preserve their virtues, and avoid their errors. These are the true uses of the Past."*

MR. A. B. MAYNE, M.A., senior house master at Hereford Cathedral School, has been appointed head master of the Cambridge and County School for Boys. Mr. Mayne, who is 29 years of age, has been chairman of the Hereford branch of the Assistant Masters' Association, and has already done much good work for the advancement of education.

THE INTERIM REPORT OF THE DEPARTMENTAL COMMITTEE ON THE EDUCATION SERVICES OF NORTHERN IRELAND.

THE interim Report of the Departmental Committee was issued some weeks ago, its publication, before the Committee had fully completed its labours, being expedited in the hope that its recommendations, as regards changes for which legislation would be necessary, would appear in time to permit the new Ministry to draft and bring in an Education Bill, as promised, early in the current Session. Unfortunately the Prime Minister, within the last few days, has announced that the Government is unable to take this step before February, and secondary teachers and others interested in expected educational developments, are doomed to put up with further delay. The Committee is to be congratulated upon tackling a very big problem in comprehensive fashion, and its report contains several important recommendations which, if carried out, should effect vast improvements in all three branches of education. It deals with questions of organization, local administration (involving the striking of local education rates), salary scales, pensions, registration, scholarships, free meals, agricultural schools, &c. If adopted, many of its suggestions will obviously entail increased expenditure: but it is evident that the Committee throughout has kept a watchful eye upon finance, and if criticism is to be directed at all upon this point, it may be said that possibly in one or two instances economy has been put before efficiency.

It is impossible, in the short space available, to enter into the details of the various recommendations, but it may be noted that especial stress is laid on the urgency of the reforms recommended in connexion with secondary education. Salary scales, with increments paid by the Department, are proposed, the Burnham Scales, without extras, being recommended as a *minimum*. As regards pensions, the Committee recommends, for all teachers, a general contributory scheme on Civil Service lines, basing its recommendations on the expediency of having a scheme which will permit free interchange of service, carrying increment and pension rights, between schools in Northern Ireland, and in England, Scotland, Wales, and Southern Ireland.

It is very satisfactory to find that the Committee is alive to this necessity, for without such reciprocal arrangements it will probably be found necessary to offer better terms to teachers in their area, both as regards pensions and salaries, than in the larger areas: otherwise great difficulty will be found in attracting teachers to the schools of Northern Ireland, as it is scarcely likely that the local output will prove even approximately adequate.

The registration proposals, which suggest that the Ministry should determine the conditions of registration on the grounds that "the fixing of standards is safer in official hands," is strongly assailed in a reservation, signed by teachers' representatives, who not unnaturally claim that "teachers, like every other professional class, should have the right to decide, through their own representatives, what shall be the qualification for enrolment in their body."

PERSONAL PARAGRAPHS.

THE news of the election of Mr. Munro, the Scottish Secretary for Education, to the judicial bench has been received with unmingled pleasure by all Scottish teachers. Scottish education has never been administered with more breadth and humanity than under Mr. Munro's régime. Even if Mr. Munro had not been the author of the 1918 Act he would have been outstanding as one who appreciated the services of the teachers to the community at their true worth and maintained the most friendly relations

with the profession in his conduct of affairs. One happy result of this is that even with the setback in school conditions during the past year there has been no criticism of Mr. Munro by Scottish teachers such as Mr. Fisher has received in England. The charitable assumption generally made is that Mr. Munro is as much distressed by the arrest of educational problems as the teachers themselves, and that if the bright promise of his Act is not to be realized in our generation it is his misfortune and not his fault.

THE sudden death of Dr. Anthony Finn, head master of Colston's Boys' School, Bristol, will be deeply regretted in scholastic circles. Dr. Finn was the son of a railway platelayer, and was born at Blencow, Cumberland, 53 years ago. He was educated at the old Blencow Grammar School and Trinity College, Dublin, where he obtained the degrees of LL.B. (1892) and LL.D. (1901). After some twelve years' experience as an assistant master at Liverpool, Darlington, and Birkenhead, he was appointed head master of Colston's in 1901.

MR. H. G. WELLS has been formally adopted as Labour Candidate for the University of London in succession to the late Dr. W. H. R. Rivers. Mr. Wells has at least one qualification which on the best authority is considered indispensable in a University representative—an open mind on many party shibboleths. Characteristically, however, and in accord with his own experience and outlook on life, he is a strong partisan for a generous educational policy and for the promotion of scientific research, a sworn foe to waste of mental ability and to a starved and cabined life for the teacher or scientific worker. If elected, he would bring to Parliament and to his party a mind at once informed and imaginative, lucid and logical, a temperament enthusiastic but without arrogance, an eye with a vision of the New World but without alchemical illusions. A man of science with a rare literary power, Mr. Wells has always been keenly interested in the adoption of scientific methods in education generally. He was a student at the Royal College of Science from 1884-7, and he was the first President of the Old Students' Association of the College.

THE REV. CANON J. R. WYNNE-EDWARDS, head master of Leeds Grammar School, has accepted the living of Kirklington, Bedale. Mr. Wynne-Edwards was educated at Giggleswick and Oxford, and was appointed head master of Leeds Grammar School in succession to the Rev. J. H. Dudley Matthews. Under his careful guidance the school has prospered exceedingly. It has increased in numbers from 168 to 600, and it holds a high reputation. A remarkable feature of its record is the large number of University honours gained by its pupils. Mr. Wynne-Edwards was president of the Incorporated Association of Head Masters in 1917, and he is an ex-president of the Leeds Philosophical and Literary Society. He lately accepted an honorary canonry in the diocese of Ripon.

MR. J. S. DAVIES, one of the hon. secretaries of the I.A.A.M., is announced as prospective Parliamentary Candidate for the University of Wales at the forthcoming election. Mr. Davies, we hope, will decide to stand simply in the interest of education. His record is that of a practical teacher. He is a graduate of the University of Wales and London, and has been teaching continuously since 1901 in secondary schools in Wales and England. At the present time he is the senior history master at Harrow County School for Boys. Mr. Davies has always taken a keen interest in the professional affairs of secondary school teachers, and apart from the position of hon. secretary of the I.A.A.M., to which he was elected last January, he has had a wide experience of Association work as hon. secretary of the Parliamentary Sub-Committee and member of the Council and Executive Committee.

(Continued on page 704.)

Achieve Success by "Degrees"

Be able to point to possession of the B. Com. Degree of London University as proof of your qualification for a well-paid post. This degree carries great weight to-day, and is within the reach of any ambitious man or woman who is prepared to devote a few hours each week to the intensely practical courses or spare-time at home coaching for the

London Matric. and B.Com. Examinations

offered by the Metropolitan College. By working under the guidance of the most highly-qualified Tutorial Staff in the United Kingdom you can turn the long winter evenings to excellent account. Scholastic Stationery and
Furniture Manufacturer,

Maker of the Oxford "IDEAL" Loose-leaf Note Book.

At a meeting of teachers at Swansea on Saturday, September 30th, Mr. L. J. Roberts was the recipient of a handsome presentation from the teachers of Wales on his retirement after serving as H.M. Inspector of Schools (Elementary, Secondary, and Technicological for the greater part of the time) for over 27 years in different districts, covering nearly the whole of Wales. Unusually warm tributes were paid to Mr. Roberts, among the speakers being Mr. W. G. Cove (President), Mr. Lloyd Pierce, and Mr. Celfyn Williams, all of the N.U.T. Executive, as well as Mr. Tom John (ex-President of the N.U.T.). Mr. Herbert Lewis, M.P., Parliamentary Secretary of the Board of Education, lately described Mr. Roberts as one who had "an innumerable host of friends throughout Wales and not a single enemy." Mr. Roberts' retirement, at the age of 54, was due to ill health.

HONORARY degrees were conferred on October 10th at Leeds University on a number of well-known men. The degree of Doctor of Letters was conferred on the Bishop of Ripon and on Mr. Bruce Richmond, editor of *The Times* Literary Supplement; that of Doctor of Science on Sir Dugald Clark, Sir Frank Watson Dyson, Astronomer Royal, and Sir Richard Gregory, editor of *Nature*; that of Doctor of Laws on Mr. H. I. Bowring, Mr. Benjamin Broadbent, Mr. Henry McLaren, and Mr. C. F. Tetley.

MISS HELEN DREW, head mistress of the High School, Newark, since 1916, has been appointed head mistress of Colston Girls' School, Bristol, in succession to Miss B. Sparkes. Miss Drew was educated at the Oxford High School and Newnham College, Cambridge. She was a Senior Optime in the Maths Tripos, 1903, and obtained a second class in Part II of the National Science Tripos in 1904. In addition she graduated at Dublin with the M.A. degree in 1907.

MR. A. C. K. TOMS, the Chairman-elect of the Incorporated Association of Assistant Masters in Secondary Schools, is a well-known member of the staff at Clifton College. Mr. Toms is a broadminded man with a striking personality, and he is already noted for his tactful handling of difficult problems. His experience includes some twelve successful years as head master at Cirencester.

CORRESPONDENCE.

CONFERENCE ECHOES.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—Some recent experiences at the Geneva Conference on Moral Education suggest points of interest for your readers. Six languages were officially recognized. At first one saw chiefly the glare of the windows, heard nothing but slamming doors and creaking seats; then German emerged from the hubbub sharp and clear, as spoken by those who knew they could make their meaning plain if only they took pains with enunciation. English speakers tried to follow their good example. French, which almost every one might have understood, was sometimes spoken low and slurred, or fast and loud and not much easier to catch. In fact the ideal conditions of a polyglot conference are just those of every other conference, slow, clear, loud speaking, good acoustics, and quiet within and without the hall.

There is a gift of ears as well as of tongues; a few days rest after a long journey, a good seat, a good light, a quiet mind, and gradually consciousness of the language medium fades into understanding of the speaker. I did not reach the higher rapt attention leading to that rare but beautiful optical illusion, the dim white halo fringing the speaker's head. This seems to need a curious complex of conditions, physical, physiological, and psychical. A good light on the speaker, but not on the listener, a fairly uniform neutral grey background, complete absence of distracting thoughts or sensations, a "gathered" or

slightly hypnotized mind and intense interest both in the speaker and his topic.

Translation tends to disintegrate the attention of a conference in various ways. An anticipated translation makes speakers less careful and may make hearers less attentive. The actual translation is of no interest to those who have already understood, and breaks up the meeting into groups of whispered conversations. Also the time taken in translation would be better used in hearing fresh speakers. A general discussion in French-English-German without translation is quite possible, it is only the old rule of the British Association as given out by Sir John Lubbock at York in 1881.

There are cautions for Englishmen speaking abroad. We need for European platforms a translatable English, one which avoids slang and purely English idioms and words suggesting false translations like "ignore," "assist," "sanction," or only uses "sacred treaties" at the Société des Nations when it is deliberately intended to suggest "sacrés traités." A knowledge of common French and German phrases into which such English might be translated is also essential. Could not our schools do more to help in producing the required literary style, a clarified European English? The ardent propagandists of Esperanto and Ido make any sane discussion of the international language problem almost impossible. Of course it is all right to permit the teaching of these languages in schools and to allow them as optional subjects in matriculation examinations. But the real problem for Western Europe is that of letting the existing dialects grow and hybridize. This is mainly a matter of hospitality to foreign words and of putting aside some prejudices associated with *echt Deutsch*, academic French, and literary English. We need not accept all Americanisms in spelling, but examiners might at least agree not to count as wrong the "First Hundred Words" of the Simplified Spelling Society. With some small concessions on our part we might then hint at others. Would the Soviet Government accept the Romance alphabet in their great scheme of popular education? Would the *Entschiedene Schulreformer* in Germany permit hyphens in compound words like *Land-wirtschafts-lehrer*? Would they ask us to print nouns with capitals? and might we ask for some elasticity in the order of words in the sentence? Would the French take kindly to a spelling reform movement and some suppression of silent letters? Can we propitiate the Italians by asking that their pronunciation and vowel values may have a preference in doubtful cases? It is useful to have an international vocabulary of some 1,000 words which are already widely current. This list has been published by the Idists and might suitably be on every schoolboy's desk, with some encouragement to use such words in English compositions. The differences of accent in a gathering of foreigners all nominally speaking English may make them very difficult to follow, whilst a correct intonation may make us intelligible to animals. It seems time that the rigid proposals of the Esperantists and Idists should be praised as a John-the-Baptist-movement-crying-in-the-wilderness, but no longer allowed to obstruct discussion or practical progress towards the real thing, an everyday language for use in Western Europe.

Yours truly,

Stocksfield-on-Tyne.

HUGH RICHARDSON.

MONTESSORI SCHOOLS IN ITALY.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—Will you allow me to trespass on your valuable space and explain the cause of the closing of the Montessori Schools in Rome referred to in the press.

Dr. Montessori has been recently appointed by the Italian Ministry of Education Inspector and Reorganizer of all Montessori Schools in Italy. I can state with authority that only such Montessori Schools will be closed that are conducted by teachers who have not been trained in the Method.

There is a very strong movement by the Italian Education Authorities in support of Dr. Montessori's Method. They desire to secure thoroughly efficient teachers, and Dr. Montessori has been invited to hold this autumn a Training Course in Naples for the benefit of *Italian teachers only*.—Yours faithfully,

C. A. BANG.

EDUCATIONAL

ANDREW MELROSE

SERIES

Fourth Edition at Press.

A HISTORY OF ENGLAND.

By A. J. WILLIAMS, M.A., and E. A. WALKER, B.A.

With new Maps and Plans. 579 Pages. Crown 8vo. Cloth. Price 5s. 6d. net.

Schoolmaster.—"A very useful text-book for teachers and for students taking the Oxford and Cambridge locals and kindred examinations; dealing in a capable and unbiased manner with the History of England from the earliest times to the death of Edward VII. . . . Practical diagrams and maps are inserted together with carefully prepared genealogical tables and altogether the book is a valuable work of reference."

By Professor J. ARTHUR THOMSON, M.A., LL.D.

Natural History Studies.

Compiled from the author's own books for use as a Reader in Schools. Price 4s. 6d. net.

Punch says: "They have not only added to my knowledge of natural history, but have spurred me on to a keen desire to increase it."

The Control of Life.

Crown 8vo., Cloth. Price 7s. 6d. net.

Country Life says: "It is the clearest, simplest, yet most comprehensive survey of the subject which has so far been published."

THE "COMMON THINGS" SERIES.

Edited by J. ARTHUR THOMSON, M.A., LL.D., Professor of Natural History, University of Aberdeen.

COMMON STONES.

By Prof. GRENVILLE A. J. COLE. Fully illustrated. Crown 8vo. Price 6s. net.

The Evening Standard says: "... a delightful and unconventional series of geological essays which will be read by the geologist and by the school-boy with the same keen enjoyment."

COMMON PLANTS.

By Dr. MCGREGOR SKENE. Fully illustrated. Crown 8vo. Price 6s. net.

The Saturday Review says: "No botanical book exists that gives so clear and philosophic a purview of the way of a plant in the earth or water. A text book that makes really good reading is not a common thing; and this one is almost exciting."

PROSE PICTURES.

By E. MARGARET JONES, B.A.

Crown 8vo. Cloth. Price 3s. 6d. net.

Here is an Anthology of passages selected from copyright and well known works by leading authors, and designed for use in Schools. The compiler, herself a teacher, has carried the work through with a consciousness of the pressing need for a work of this kind. The authors include: Fiona MacLeod, E. V. Lucas, R. L. Stevenson, Stephen Graham, Michael Fairless, David Grayson, Richard Jeffries, Alice Meynell, and others.

N.B.—Head Masters are invited to apply for specimen copies, which will be supplied at half the published price.

OXFORD BOOKS FOR BOYS & GIRLS

THE HIGH STANDARD OF OXFORD BOOKS IS KNOWN AND ACKNOWLEDGED THE WHOLE WORLD OVER.

IT IS NOT SO GENERALLY KNOWN, HOWEVER, THAT THE OXFORD UNIVERSITY PRESS ISSUES A VERY LARGE NUMBER OF BOOKS FOR BOYS & GIRLS—BOOKS SUITABLE IN FACT FOR ANY LITTLE MAN OR MAID OF EVERY AGE FROM CRADLE TO ADOLESCENCE.

THESE OXFORD BOOKS FOR BOYS AND GIRLS (AND BABIES TOO) ARE CHARACTERIZED BY THE SAME SCRUPULOUS EDITING, THE SAME FINE PRINTING, AND THE SAME BEAUTIFUL BINDING, AS OXFORD BOOKS IN GENERAL. THERE ARE STORIES BY THE FINEST AUTHORS TO QUICKEN THE PULSE AND FIRE THE IMAGINATION OF OUR YOUNG PEOPLE, AND EXQUISITE ILLUSTRATIONS TO GLADDEN EVERY YOUTHFUL EYE.

EVERY BOOK IS ISSUED WITH THE OXFORD GUARANTEE OF EXCELLENCE, AND THE PRICES RANGE FROM THREEPENCE UPWARDS.

Gift Suggestions

FOR BOYS

WINNING HIS NAME:
A Romance of Stuart Times.
By Herbert Strang. 6/- net.

THE HARLEY FIRST XV:
Stories of Public School Life.
By Hylton Cleaver. 6/- net.

THICKTHORN CAMP:
A Story for Boy Scouts. By
Mark Harborough. 3/6 net.

FOR GIRLS

KATHLEEN'S ADVENTURE. By Brenda Girvin.
6/- net.

DIMSIE MOVES UP AGAIN. By Dorita F. Bruce. 6/- net.

THE KAYLES OF BUSHY LODGE. By Vera Dwyer.
6/- net.

FOR CHILDREN

THE PEEK-A-BOOS GO SHOPPING. Written and illustrated by Chloë Preston.
6 colour plates. 6/- net.

US: A Story in Seven Breaths. Written and illustrated by Cecil Aldin. 3/6 net.

SING-SONG STORIES. By Agnes Grozier Herbertson. Beautifully illustrated in colour. 3/6 net.

MEG OF THE BROWNIES. By Margaret Stuart Lane. 2/6 net.

SMITH'S INTERMEDIATE CHEMISTRY

Revised and re-written by J. KENDALL, Professor of Chemistry, Columbia University, and E. E. SLOSSON, Author of *Creative Chemistry*. Price reduced to 8s. 6d. net.

In this new edition the late Prof. Alex. Smith's *Intermediate Chemistry*—one of the series which has become classic—has been thoroughly revised and brought up to date. A certain amount of rearrangement has also been made to ensure an order which is perhaps more logical and certainly more easy for both teacher and student.

Full list of Prof. Smith's *Chemistries* on request

BELL'S MATHEMATICAL TABLES

together with a collection of mathematical formulae, definitions, and theorems. By L. SILBERSTEIN, Ph.D. Demy 8vo. 16s. net.

"Should prove of the greatest value to mathematicians and students. . . . The second part puts together a number of mathematical tables and formulae for which reference would otherwise have to be made to a variety of mathematical treatises. The extent of ground covered in small compass is very great."—*Times*.

BELL'S MATHEMATICAL SERIES

ADVANCED SECTION

General Editor: Professor W. P. MILNE, M.A., D.Sc.

A First Course in Nomography. By S. BRODETSKY, M.A., B.Sc., Ph.D. 10s. net.

"A very satisfactory elementary account . . . the diagrams are clearly drawn, and the examples well chosen."—*Mechanical World*.

An Elementary Treatise on Differential Equations and their Applications. By H. T. H. PIAGGIO, D.Sc. 12s. net.

"One of the best mathematical text-books in the language."—*Mathematical Gazette*.

The Elements of Non-Euclidean Geometry. By D. M. Y. SOMMERVILLE, D.Sc. 7s. 6d. net.

"An excellent text-book for all students of Geometry."—*Nature*.

Elementary Vector Analysis. With Applications to Geometry and Physics. By C. E. WEATHERBURN, M.A., D.Sc. 12s. net.

"An excellent introduction to the subject."—*Nature*.

A First Course in Statistics. By D. CARADOG JONES, M.A., F.S.S. 15s. net.

"An excellent 'first course'."—*Mathematical Gazette*.

Three Standard Historical Text-Books

THE LIFE OF NAPOLEON I

By J. HOLLAND ROSE, Litt.D., Vere Harmsworth Professor of Naval History, University of Cambridge. **Eighth and cheaper edition.** One volume. 1,126 pages, with Portrait, Maps and Plans. 10s. net.

"To say that Dr. Rose has written the best life of Napoleon yet published is but faint praise, far less than he deserves, often as the task has been attempted."—*Times*.

BRITISH DIPLOMACY, 1813-1815

Select Documents dealing with the Reconstruction of Europe. Edited by C. K. WEBSTER, M.A., Professor of Modern History in the University of Liverpool. 12s. 6d. net.

"An invaluable collection of 230 extracts from original documents. The story of 1813-15, as told in this illuminating source-book, is full of parallels to present-day problems."—*Journal of Education*.

MODERN EUROPEAN HISTORY

from the Close of the Eighteenth Century to the End of the Great War. By C. D. HAZEN, Professor of History, Columbia University. Illustrated. 7s. 6d. net.

"Contains a fine array of historical portraits and other adornments . . . undoubtedly a first-rate text-book."—*Journal of Education*.

York House, Portugal St., W.C. 2

SUPPLEMENTARY AIDS TO CLASSROOM WORK.

XI.

NATURE STUDY.

By E. W. SHANN, Oundle School.

THE term "classroom work" at once calls up for the teacher a vision of a prescribed syllabus of work to be carried out by a class during a definite period of time. A problem then devolves upon the teacher as to the best form in which to present the prescribed work. We are all agreed nowadays that a series of formal lessons (however neatly arranged to cover the syllabus) spells stagnation instead of impetus to mental development; at the same time the teacher who regales his class at every meeting with some form of "stunt" will achieve no more, if as much, success.

The teacher preferably should be at liberty, within certain broad limits, to compile his own syllabus. It is manifest that the whole subject-matter comprised by the term "Nature Study" cannot adequately be presented in the normal course of one year, and that certain aspects of it must therefore be selected as being most suitable for the locality of the school, the age and mental calibre of the class, and so forth. Having taken into account the above considerations, the teacher will be well advised to consult the members of his class as to the aspect of the subject which particularly appeals to them (they will be found, as a rule, to have quite definite predilections), and by this means he will have his class with him from the outset. Moreover, this selective method gives him power to make capital out of any branch of Nature Study to which he has devoted his personal labours; there is an infectious magnetism in the touch of the expert which is well worth the risk of criticism on grounds of over-

specialization. Whether the syllabus is framed by the teacher or by higher authority, however, there must be a definite objective to classroom work if the class is to benefit by it.

There is not space here to enter into the history and aims of Nature Study, but teachers of the subject who have not already done so would do well to read chapter II in "The Teaching of Biology" (Lloyd and Bigelow); there is life in it.

The progress of the more advanced type of Nature Study, generally known as Natural History, in our schools has been hampered of late years by the finding of the Secondary Schools Examination Council (1919) that "The principles of biological science can be better illustrated by means of botany, especially as physiology occupies a far more important place in this subject than in zoology, which does not readily lend itself to experimental treatment." This finding has received timely castigation at the hands of the Zoology Organizing Committee of Section D of the British Association, whose report (issued 1921) has been acclaimed and supported by teachers of biology throughout the country. In America, where the teaching of biology holds a much more prominent position in national education than it does in this country, there has been no attempt to subordinate the status of zoology to that of botany; indeed, part of the programme, even in the elementary schools, is earmarked for "Human Physiology."

The theme of the present article is Nature Study, to which we will now return. The above digression was made in order to forecast the effect which the narrowing report of the Secondary Schools Examinations Council will have upon the conception of Nature Study in the elementary schools. It will become synonymous with (very) elementary botany; for, if there is to be any continuity in education, the work of the elementary school should lead to a jumping-off place for what is to be done later in the secondary school. The beauty of the term "Nature Study" is that it is elastic enough to comprise the elements of botany, zoology, and human physiology, to say nothing of agriculture, geology, chemistry, and physics. One would not wish to dwell upon any of these sciences to the exclusion of the others (much less to mention their names); all too soon comes the segregation of branches of knowledge into water-tight compartments. In beginning the study of nature the plant must be taken in conjunction with the soil and air which form its natural environment, also with diurnal and seasonal changes: the animal in conjunction with the plant and with other animals living and fossil: finally man himself in relation to other living things and as regards the elementary workings of his component parts. It matters little what natural object is selected for study so long as the work is carried out on scientific lines ("scientific lines" does not imply the substitution of long names for short, but simply all that makes for intellectual honesty). If the scientific method is not applied even with the youngest classes, if slackness of thought and aimless questions are tolerated, if no results are recorded or conclusions deduced from them, the classroom work in Nature Study may degenerate into a rag, the "field-work" into a picnic. The common tendency is to underestimate rather than to overestimate the mental capacity of a class, and to withhold every advance in knowledge until the last possible moment on the plea that "they are too young to know." The attitude represents a lingering trace of what was in primitive man a strong instinct, namely, that of self-preservation; his sons must not learn all that he knew, or too soon would they be ready to club him that they might reign in his stead. This bogey of the past has no portion in a race of modern pioneers.

Having now reached a conception of what is understood by classroom work as applied to Nature Study, let us proceed to consider what supplementary aids can be introduced to sustain its vitality.

At the outset, the study of nature should be approached

through the observation of an object, preferably a living object; and this course should be followed up throughout the first year of study. It is better to avoid the use of a text-book than to give the impression that knowledge of life comes through memorizing the book instead of through personal observation (this secret escaped me before I realized that I was the author of such a book). Plant physiology furnishes a good approach to the subject, provided, of course, that the experiments are actually carried out and not merely described; moreover, there must be an atmosphere of adventure about the proceedings, it must not be a matter of following the book. In striving for this atmosphere one of the pearls of the classroom fell to the writer's lot. The subject to be taught was "root-pressure." I recalled to the class that an upward current of water in the stem was induced by transpiration from the leaves (we had noted this previously in the case of a cut plant, in which the root could have exerted no influence); now we were out to discover whether the root assisted or retarded the upward current of water. Some of the class predicted the former result, others the latter (it will readily be understood that all were beginners and that none possessed a text-book). By dint of suggestions from the class we arrived at the necessary preparations for the time-honoured experiment. While these preparations were being carried out by some members of that very junior form, an enthusiastic young voice inquired, "Sir, has this experiment ever been done before?" One has to play the game, and my reply was to the effect that the experiment had been done before, but under different conditions, and that the results always required careful investigation.

Where the biologist is handicapped as compared with the chemist or the physicist in his introduction of experimental method is the relative slowness with which his results are attained. An experiment set up on any one day will in very few cases yield a result on the same day. In cases where it is imperative to cover a syllabus in a given time one cannot indulge in the purely heuristic method of approach; it becomes necessary to hustle. At the same time, if the class is allowed to feel its way for the first few lessons, the thirst for knowledge of life, inherent in every member of a young class, will be inflamed instead of tamed; and, once fired, the spirit of adventure will spread to all the subsequent work. There are, however, other methods of speeding up the results without resorting to anything which savours of dictation. The "Conversazione Method" lends itself well to this end, the class furnishing both the lecturers and the audience. The schedule of work to be done is divided into a suitable number of more or less equal parts, and the class is divided into a corresponding number of syndicates. Each syndicate carries out its prescribed experiment, or collects its prescribed information; when the work is complete, a spokesman from each syndicate describes to the remainder of the class the results which he and his fellows have obtained. There is also a rather interesting classroom game which in the writer's student days was known as "Progressive Microscopes." It frequently happens that a classroom boasts only one or two slides of each of a given series of microscopic objects. The wary teacher, recognizing if these are passed round that his class will probably either select the wrong portion of each object or examine the right portion with the wrong power, is fain to draw the objects on the blackboard for the class to copy. If, however, each slide is placed beforehand so that the required portion comes under a suitable magnification, and brief descriptive notes, headed by numbers, are tethered beneath the stands of the microscopes, each member of the class as he enters can go to his accustomed place and draw the object which he finds there. At appropriate intervals (5 to 10 minutes) the order "Change!" is given, upon which each member of the class moves one place up (the last member of the series becoming number one). The game is, of course, equally applicable to objects easily visible to the naked eye, e.g. types of buds, leaves, fruits,

&c.; moreover, when the descriptive notes are omitted, it constitutes a useful form of practical test.

Some knowledge of what is meant in a biological sense by variation is desirable, especially when leading up to the idea of evolution. The study of variation can be introduced in the form of a simple experiment. A quantity of beans are divided amongst the class. The lengths of the beans are then measured to, say, 1-20th inch, and the numbers of beans of each length (8, 9, 10, &c., twentieths) are recorded on the blackboard from the observations of the whole class. The result shows very clearly that the majority of the beans are of medium length, and that on each side of the maximum number there is a similar falling away as the extremes of length and shortness are reached. This experiment will also furnish material during the mathematics hour for plotting a graph. Beans are suggested since, while easily handled, they will come in later for studying seed-structure and germination; but many other plant structures will be found equally instructive.

The nature chart serves to keep the classroom in constant touch with the outside world. The vertical columns of the chart contain such headings as: Birds (Migrant, Nests, and Eggs); Insects; Wild Flowers; Agriculture (Crops and Animals); Barometer; Wind and Rain; Sunshine; Thermometer; while the horizontal lines mark off the days of the month. The chart is posted on the classroom wall, and entries are made daily from the observations of the class. A new chart should be posted every month. Another method of keeping touch with the outer world is the living museum. This is an exhibit which changes with the seasons and requires constant renewal. Specimen jars are still prohibitive in price, but jam jars will serve to hold the exhibits, and a side table will be necessary on which to arrange them. In winter a collection may be made of twigs of all the trees in the neighbourhood; they illustrate the different types of buds and scars; each should be named. In spring the same collection can be renewed, when, if kept in water, the opening of buds and the formation of leaves and flowers can be watched. The next exhibit may be the prevalent weeds of the locality: with names, nature of crop, and means of eradication noted on the descriptive labels. And so on throughout the year: flowers, insect pests, fruits, fungi, mosses, &c., following as time and opportunity serve.

One of the most outstanding aids to classroom work in Nature Study should undoubtedly be "field work"; but this requires tactful handling if it is not to degenerate, as was said before, into a picnic. Some of the class will give their attention all the time, and all the class some of the time; the problem is how to retain the attention of all the class for all the time. This difficulty is always with us, indoors and out, though in the classroom the distracting factors in the environment are reduced to a minimum; at the same time the factor of somnolence is almost entirely eliminated in the open. It is necessary to have a definite objective for every outing, or the proceedings will resemble the adventures of the "Three Jovial Huntsmen" in the old song. A pencil and rough notebook form the essential equipment of each member of the class (notes inspected on the spot as a provision against the delinquent who proposes to "get the stuff from another fellow"). Much may be learnt from a brief study of a quarry: soil, subsoil, rock; weathering, with assistance of roots of plants; renewal of plant life on the cut surface, lichens and mosses; fossils, if any. Specimens of soil, rock, plants, &c., can be taken back to the classroom to furnish material for several hours' work, and there is an interest in material collected by oneself that can never be roused by the same material ready dumped in the classroom. Subsequently one may visit a gravel pit and compare the nature of the subsoil, the plant association, and so forth, with what had been observed in the quarry. There will be opportunities on the walk for stopping now and again to point out some example illustrative of a previous lesson or to make some note for the nature chart.

It has been impossible to enter into the consideration of Natural History Societies, pet-keeping, and other similar activities of the school not directly connected with classroom work, or to mention the research work which can be performed in senior forms, or, again, the holiday courses in marine biology, geology, &c., which some schools provide for such forms. Already I am exceeding my allotted space, and although I have limited myself almost slavishly to the title of the article, there yet remain many supplementary aids to classroom work in Nature Study. My aim has been to present a few such aids in sufficient detail to enable any fellow naturalist to give them a trial; most of these aids are not new to all, but may be to some, and to them they are offered for what they are worth.

THE DALTON PLAN.*

BY MISS C. T. CUMBERBIRCH.

THE idea of greater freedom and increasing self-activity for the child can be traced from Rousseau, who established the doctrine of freedom for the child physically, to Dr. Montessori, who has shown that free activity is necessary for his social and intellectual education. The application of this to older children under special conditions is seen in the Dalton Plan, which has aroused extraordinary interest and discussion. The idea behind the Plan is bigger than its name and represents something which we in England have been trying to formulate in word and in procedure for some time, and perhaps that is why the interest here is greater than in America.

For years we teachers have repeated to a point of weariness the weaknesses of class teaching: the inequalities in capacity, attainment, temperament, tastes of a class. We have realized that some have been squeezed and some stretched by the system and we have come to know that there is no "average need" which we can set out to supply. And for years we have tried to lessen these wrongs. The change in Primary Schools from Class Oral Reading to individual silent work, and the use made in Secondary Schools and Training Colleges of the results of individual simple research work or study are significant instances. Teachers have tried where possible to change the weight of emphasis from the class to the group or to the individual.

So there was already outside the Dalton Plan much that is within it. But Miss Parkhurst has focussed interest sharply on certain questions, and in her system, with its clean-cut edges, we may see our vague ideas concentrated and our partial efforts extended. The Plan has no vagueness or tentativeness, and its aim is most clear. The child must teach himself, and for the teacher, the child, and not the class, is the unit.

The Plan is too well known to need description. In the city of Hull we have made experiments in the direction of the Plan, though we have moved with caution. One girls' school and a junior mixed school began the Method with one class in one room and one teacher taking all the subjects: another girls' school is working its own modification of the Plan in two classes, with specialist teachers, and no specialist rooms, the teachers moving to the different rooms at the time-table times: one senior girls' school and the Municipal Training College have tried the Plan fully. There are different conditions as to length of assignment, frequency of class lessons, and amount of time for free choice. No school has used the complete Graph system, though all have some recording methods. In all cases corrections have been found heavy. The head teachers and teachers are not at one in opinion, though on the whole it is favourable. The effect of the System on the different types in a class is not always found to be the same, e.g. "It is better with the slow children"; "it is better with the intellectually stronger";

* Outline of a Paper read to the Education Section of the British Association, Hull.

"the quiet like it"; "the child of the limelight does not like it"; "the stronger children are apt to become aggressive"; "with dull children it is not a success." The experience of the effect on the school attendance is more uniform—"they will come to school if they can crawl"; "a girl has a constant fight on washing days to conquer the indifference of her family."

As to the value of the Plan generally, the head teacher of the senior school finds, to quote a few of her points, that the information acquired by the girls seems more precise, that a sense of perspective is developed because a large portion of the syllabus is outlined, that children are surprised to find that they can work so well alone or that they find it so difficult to work alone in certain subjects, and that most children become increasingly business-like in their attitude to work. The head teachers agree as to the obvious growth of self-reliance, concentration, and independence of thought, but feel that special care is needed if co-operation and *esprit de corps* are to grow too. With college students, the Plan seemed to lead to less confusion of thought and more systematic reading, and the practice in the selection and arrangement of facts—which is usually done by the lecturer—was evidently valuable. The weakest students were somewhat bewildered—the average students gained the most, and some of the best seemed to miss the stimulation of the lectures.

To pass from a local to a more general survey. Two points should be noticed, which account for some adverse criticism. The English attitude to education is not the American, and American phraseology sometimes irritates. Throughout the Plan we have a business-like arrangement and business terms: it speaks of contract and job and of budgeting; there is a bargaining touch in the "Departmental Cut," and the assessment of work done is a numerical one. Speed and efficiency do not represent education, and one wonders whether a thorough Dalton child would learn to *browse* sufficiently, or could ever achieve that leisurely culture which Mr. Leacock envies in our older universities! Again, there is a natural conservatism in us, explaining our national genius for compromise; weakness and strength are in it, and its strength is seen in our desire and capacity to link with experiment and buoyant initiative, the appreciation of the tried excellence of old ways. We acknowledge that however teaching may have to change as a result of the Plan, some of it has been *good*, and we resent a little, therefore, Miss Parkhurst's sweeping assertions that "the old class lesson was always the concern of the teacher's interest and speed," or "the teacher need no longer have to thrust information down unwilling throats," or, again, that "the teacher in the future will neither be stilted nor unnatural."

To go further in discussion we must ask: What is the valid place of class teaching if all true education is self-education? Miss Parkhurst and her followers give little opportunity for class teaching beyond that which aims at explanation of work and elucidation of difficulties. We hear of the need of the teacher to remain passive, of the teacher's "self-denying ordinance," or "self-abnegation"; the old qualities of good teaching, arresting descriptions, suggestive and eloquent exposition are given no stated place, but we are reminded that the inspiring lesson as such may not be a help but may intervene between the child and his work. Perhaps one of the best things the Plan has done is to make us examine established methods of procedure and their results. No one would deny the danger in the over-stimulating, or in the over-efficient, all-capable teacher who could proudly keep fifty listening as one, nor would any deny the danger in class lessons of the inspirational type. And yet there would be weakness in any system which does not use their strength. There are powers of imagination and of feeling within the child which may be released only through the living personality of teacher or parent, just as the latter's more mature experience and thought are a necessary guide in the training

of a child's discrimination and judgment. We may be told that so many inspiring lessons, lectures, sermons, are forgotten. Yet we know now as never before that our mental and spiritual attitude is influenced and determined—and this does not end with youth—by the hidden store of "forgotten" impressions. The adult does not live on or by the Dalton Plan method; if so there would be no need for lectures, even of a British Association! Each year our students are set to think out Prof. Green's trenchant questions: "Why do you attend lectures on subjects which are adequately treated in text-books?" and "Think of three of your most cherished 'convictions'; to what influence do they owe their strength?"

Thring's definition of education is still one of the finest—"The transmission of life from the living teacher to the living child," and the thought of the teacher as a transmitter especially of an enthusiasm for beauty, must be added to the Dalton idea of the teacher as observer and explainer. We know, too, that such transmission is easiest when numbers are large, and for this reason Dr. Hayward would for certain purposes increase classes in number. Our new methods, rightly thinking so much of the individual, must not ignore the power of collective personality and collective emotion, and no amount of necessary warning against the evils of mob enthusiasm should blind us to the other side. "Action and reaction among the pupils in a class has an educative value quite apart from the value of the subject being taught." The conclusion of the matter to some of us is that the class lesson remains where it was in those subjects in which the personal, suggestive, imaginative power of the teacher can be communicated, or in narration and description which to children—as to adults—often takes on life when met with in the living voice of a speaker.

At the same time the Plan has made us revise our ideas of the good teacher, and there is gain here. The good teacher in the future will be one who can place first in his own observation and interest, the growing self dependence of the child, and his increasing power to read carefully and to appropriate what he reads. The child is given material, equipment, tools, and the good teacher will form his judgment of the child's progress not only from the point reached but also from the growing ease and spontaneity in the management of equipment. The very close contact between the teacher and child, which is one admirable result of the Plan, will make such increased personal knowledge possible; in the past it was difficult to have more than a superficial knowledge of the children's progress apart from judgment of results.

On the intellectual side the quality of the teacher will be recognized in two special directions. First, in the setting of assignments and their differentiation for the different grades of children. Assignments are not an easy matter, and the faults of the bad teacher will be more obvious and more dangerous here than under the old system. Width of thought and discriminating judgment will be needed to find the right problems and work, which will cover the ground adequately. Secondly, in the heavy work of corrections, which now will entail an added responsibility. From the teacher's corrections and from the kind of assignment the child is to form his intellectual standards. There will be the constant difficulty of the volatile child too easily satisfied, who might count a subject finished when questions on it are answered. In our old method, the good teacher often asked a question, which after class discussion he showed to be beyond a finite answer; he wisely did this when speaking of the great forces working in the history of man. Somewhere in the teaching of the future there must still be room for the discussion of such questions as cannot be answered in a child's exercise book.

Looking forward one can see among the results of the wise working of the Plan—or its modification—in the pupil, more active interest, more thorough and more permanent knowledge, a larger sense of inquiry with greater power to satisfy it—a power not dependent on

outside stimulus, a keener love of books, and growth in independent thinking. Between teacher and pupil there will be a new sense of co-operation and comradeship in learning, which along with other factors will give a new quality to discipline.

The Dalton Plan will not completely change method and procedure in our schools and colleges, but it will profoundly modify them.

UNIVERSITIES AND SCHOOLS.

ENGLAND.

The Chancellor (Lord Curzon) has re-appointed Dr. L. R. Farnell, Rector of Exeter, for a third year of office as Vice-Chancellor. In Convocation on October 11, the Vice-Chancellor read

Oxford.

himself in, as it were, by a speech in English, following his own precedent. He announced some important benefactions—an unknown benefactor is to bequeath £50,000 for the general needs of the University, and there is a gift pending of £120,000 from the Trustees of the late Sir William Dunn for an Institute of Pathology. The first benefaction is to be used to increase the stipends of University teachers. The second is novel, for Oxford has few institutes for scientific research, and has not hitherto specialized in the direction of applied medicine. It is to be hoped that the conditions for research in pathology at Oxford may be found favourable, particularly the adequate supply of material, human, animal, and vegetable. Subject to this, pathology offers a fruitful field of work, the cultivation of which will greatly enhance the prestige of the University.

The Vice-Chancellor also commented on the report of the Royal Commission. He warmly approved of the creation of University lectureships which would relieve overburdened College tutors of some of their work and forge a new link

Report of the Royal Commission.

between the Colleges and the University. He felt there was some danger in the proposal to extend and increase extramural teaching. The most significant of his comments related to the question of State grants and consequential control. Why not, he suggested, secure the grant by Act of Parliament? As to sumptuary laws for undergraduates, more could be done by private advice and counsel than by public action. This year will bring to an end the residence of war students, aided by Government grants, to whose work the Vice-Chancellor referred with appreciation.

The Vice-Chancellor, Dr. Pearce, Master of Corpus Christi College, in his address to the Senate, observed that the financial recommendations of the Royal Commission would probably have had

Cambridge.

some chance of being carried into effect "but for the serious condition of the national finances consequent upon the chaotic state of domestic and international politics and budgets." He referred in feeling terms to the losses sustained by the University by deaths during the past year. The University progresses rapidly in the direction of organizing a complete series of research institutes. The Institute of Parasitology, the gift of Mr. and Mrs. Molteno, was opened in November, 1921; that for Low Temperature Research in Biochemistry and Biophysics is now completed and at work; and the Institute of Agricultural Botany has been honoured by a Royal visit. Dr. Pearce has been admitted to the office of Vice-Chancellor for another year.

The Senatorial Elections consequent on three casual vacancies, one in Arts and two in Science, have excited unusual interest. In Arts the voting was

London.

1,044 for Dr. Scott Lidgett and 731 for Miss Paul; in Science, 813 for Dr. George Senter, 477 for Mr. C. W. Crook, these being elected; 321 for Dr. J. S. Bridges, 309 for Mr. T. Ll. Humberstone, and 191 for Dr. Jessie White. The successful candidates, Dr. Scott Lidgett, Dr. Senter, and Mr. Crook were supported both by the Graduates' Association and by the Teachers' University Election Association. When, at the previous election in Science, Mr. Crook was supported by the Teachers' Association only and opposed by the Graduates' Association, he gained 344 votes and was not elected, two seats being won by nominees of the Graduates' Association and the third by a nominee of the Teachers' Association. On the present occasion the two Associations supported agreed candidates with the results stated. Unfortunately the election in Science was marred by what will be regarded by many as an illegality in that the voting papers practically directed the

electors to vote for two candidates and prohibited single votes. The objections which were lodged by some of the independent candidates were overridden—ignored would perhaps be a more appropriate word—though in part admitted by the chairman's direction to the scrutineers to count single votes, a ruling which failed to meet the gravamen of the objection. The Standing Orders of Convocation, it may be observed, clearly permit an elector to vote for as few or as many candidates as he pleases, not exceeding the number of vacancies, and this is in accord with usual practice in elections. All the elected candidates can claim wide educational experience as well as personal qualifications. Dr. Senter would, however, more appropriately have been elected to a seat on the Senate as a University teacher and as a representative of the Faculty of Science, sixteen seats on the Senate being reserved to the teachers of the University who are members of the several Faculties. The balance of the constitution of the Senate must be affected if the tendency to elect University teachers to Convocation seats continues unchecked. The proportion of electors who voted appears to have been distinctly higher in Arts than in Science.

The new premises of the Union Society on the Bloomsbury site, formerly the Pickwick Hut, were used for the first time on October 17 for a debate on the League of Nations, which was conducted on competitive lines on the American model, the speakers being representatives of various Colleges of the University. Lord Ulleswater acted as adjudicator. The internal alterations of the new premises include the provision of a debating hall and two common rooms. Notwithstanding generous financial support from the Senate, further funds are needed for furniture and equipment. It would be difficult to overpraise the ability and enthusiasm which the students have shown in this undertaking. In enterprises of this kind, however, it is often *not* the first step which costs. The really testing time will come later when apathy, intrigues, jealousies, and others of the unholy brood, begin to assert themselves. May that time be long deferred!

The candidates for the representation of the University at the next Parliamentary election appear to be ranged: Sir Sydney Russell-Wells (Conservative), Prof. A. F. Pollard (Liberal) and Mr. H. G. Wells (Labour); though it is not impossible that one or two more candidates may come forward, a woman, for example, or, as in the last election, a freak. It is a remarkable coincidence that the two candidates who are graduates of the University should have the same name—Wells—and that both should have been educated at the same College, the Royal College of Science. After their purely scientific training, their paths diverged, Russell-Wells proceeding from science to medicine, and H. G. Wells from science to teaching and literature. Prof. Pollard, the historian, will be seriously handicapped in his campaign by the fact that he is not a graduate of the University. He is a distinguished teacher of the University, and one of the strongest champions for the development of the University on its teaching side. The Institute of Historical Research recently opened on the Bloomsbury site is largely the creation of his active and fertile brain.

WALES.

Welsh education authorities seem to be concentrating all their energy at present on the reduction of educational expenditure, and for the moment to be quite indifferent to the progress of education within the areas under their control. One rarely notices any discussion of an educational problem, for finance dominates all other considerations. In some of the counties the endeavour to cut down educational expenditure has taken the form of dismissing married women-teachers and of closing the smaller rural schools. Three education committees decided to make an attack on the Burnham Scale of salaries by the insidious method of inviting teachers to a joint conference on the question of salaries, but as might be expected it was impossible to arrive at an agreement, as the teachers rightly contend that the Burnham agreement is operative till 1925 and is binding on the authorities. In Monmouthshire and Abertillery, similar negotiations were carried on, but in each case they were unsuccessful. In Anglesey the County Education Committee has asked the governing bodies of the three intermediate schools to reduce its annual expenditure by £700 or £800, and to effect this the staffs have been reduced in each school. In Montgomeryshire, the salaries of the teachers have been reduced by 20 per cent, and there has been a curtailment of educational facilities within the county. It is also very probable that the Welsh Department will bring further pressure

on Welsh education authorities to curtail their expenditure, because the estimates already submitted to the Department by the Welsh counties exceed by about £40,000 the sum allocated by the Treasury for education in Wales. It is, therefore, almost inevitable that secondary education will suffer, because the Welsh Department has threatened to set a definite limit upon the sum which it will contribute towards its expenses.

The Miscellaneous Provisions Bill is also another possible source of danger; and the Swansea Education Committee has uttered a strong protest against its adoption by Parliament. It was of opinion that too much importance could

not be attached to the clause in the Bill which conferred on the Board of Education the power of limiting grants to local education authorities in order that they may fall within the amount provided by Parliament for the purpose. This is tantamount to doing away with the Deficiency Grant and to substituting for it any amount the Board might think fit to contribute. It was resolved so join with other authorities in uncompromising opposition to this section of the Bill, and to endeavour to secure its withdrawal by Parliament.

The Welsh Department of the Board of Education has issued an order empowering the Central Welsh Board to examine at the school certificate stage, ex-pupils of the intermediate schools.

Examination of ex-Pupils.

This is a very important new extension of the powers of the Central Welsh Board because, so far, its examinations have been strictly confined to pupils actually attending the schools, and were not open to outside candidates, as are the University locals. This new concession will, no doubt, be very useful to several ex-pupils who, for a variety of reasons, have failed to obtain a school certificate and who afterwards discover that its possession is necessary for them as an avenue to a profession or to an appointment. It will, however, be necessary for the Central Welsh Board to consider very carefully the conditions under which such ex-pupils shall be admitted to the examination. Unless great care is also exercised, it is quite possible that this new privilege will have a tendency to shorten the school life of some of the pupils, for if they are allowed to sit for the examination at any time, and without any restrictions, many of them will undoubtedly leave the school before they have completed a proper course, and be prepared to take the risk of qualifying for the examination later on.

On Monday, October 9, the fiftieth anniversary of the foundation of this College was celebrated, the College having been opened on October 9, 1872. Mr. D. C. Roberts of Aberystwyth, who presided at the function, gave a short

University College, Aberystwyth.

history of the growth and development of the College during the last fifty years. Its beginnings were small, for on the opening day there were only three on the staff and twenty-five students, whereas during this session there are over 100 on the staff and nearly 900 students. He expressed his pride that the foresight of the pious founders of the College has now been so amply justified in its growth and success, as well as his confidence that further developments await the College in the future. Many old students of the College have risen to positions of eminence and usefulness in the public life of Wales, and they were present to testify to their loyalty and devotion to it. The work of Sir Hugh Owen, Mr. David Davies, Llandinam, Principal Thos. Charles Edwards, and Principal Roberts was eulogized in excellent speeches by Principal J. H. Davies, Sir Ellis Griffith, Major Edgar Jones, and others. The Old Students' Association also unveiled a tablet "To the memory of the men of the Mitre Court, and the men of the Freemasons' Tavern, and of all those brave old founders by whose labours the young people of Wales now enjoy the gift of knowledge."

Prof. C. K. Webster has been appointed to the Wilson Chair of international politics at the University College, Aberystwyth, in succession to Prof. Zimmern. Prof. Webster holds at present

Appointments.

the Professorship of Modern History at the University of Liverpool, and was secretary to the British Delegation at the Paris Conference.

SCOTLAND.

The main interest of the second Annual Meeting of the National Committee, which was held in Edinburgh at the beginning of the month, was in the report submitted by the Central Executive in regard to economies effected during the past year. Taken on its face

The National Committee for the Training of Teachers.

value the report was excellent. The levy made on the education

authorities for the upkeep of the Training Colleges had been brought down from £6 for each teacher employed to £4 10s., and there was prospect of a further reduction to £3 in the present year. At that figure it was likely to remain for some years to come on account of the heavy burden imposed by the capital expenditure on new colleges in all four centres. So far no reduction had been made in the salaries of the staff of the training colleges, but it was suggested that that might come once the authorities agree among themselves on a common policy in regard to their own teachers. One economy which was not mentioned was that which would result from a reversion to the old system of four Provincial Committees and the disappearance of the National Committee and its Executive. The National Committee has not met for months, and there is no reason to believe that any difference would be made if it never met. The case against the Executive is different. Of its activity there is no question. What is in doubt is the value of its activity. As things are the Local Committees deal with the affairs of their own centres in a semi-responsible way and pass on their findings to the Executive, with the result that business proceeds slowly and adjustments are hard to make. It is certainly not an economical system.

In the report to the National Committee, credit was claimed for the steps taken to secure for the teaching profession the large number of young people who had been induced to go in for a degree

The Supply of Teachers.

on applied science just after the war and who now found themselves without the remotest prospect of employment in the industrial sphere. Whether the claim will be admitted, either by these students at the end of their new training or by the teaching profession, is another question. For as Prof. Darroch, the chairman of the National Committee, has said, and as indeed everybody knows, there is at the present moment a glut of teachers of all sorts, and more especially of highly qualified secondary school teachers. It is not unlikely that a considerable number of the men and women who met disappointment at the end of their science course may find the same fate awaiting them at the end of their training as teachers. The fact concealed by the report is that the bringing in of these science people was a serious blunder. What is worse is that the same blunder continues to be made with other groups of students. In all the centres graduates are thronging into training in unprecedented numbers, evidently driven to teaching by the closing of other avenues of employment, and nothing whatever is being done to save them from themselves by excluding the less desirable entrants and warning the rest of the risks of later unemployment. The mischief that is being wrought not merely in regard to the students' careers but in regard to the supply of teachers when disillusionment comes is so obvious that one wonders at the ineptitude of the Committee. The extraordinary suggestion has been made that the local committees are unwilling to discourage entrants of any kind because every additional student reduces the cost of training per student!

Great play has certainly been made with the fact that the cost of a student at Dundee is £154, at Glasgow £65, and at Aberdeen and Edinburgh £58. These figures have been so often repeated that the committees may well have come to

The Dundee Training College.

the conclusion that a lowering of the figures, however effected, is the supreme test of economical administration. One proposal rising out of the comparison, almost as foolish as the increase of students beyond the present need, is that the splendid new college in Dundee should be closed, and staff and students dispersed among the other three colleges. Admittedly that would be an "economy"—just now. So would the closing of St. Andrews University and the dispersal of its staff and students. But apart from the fact that the time may come at no distant date when the students from the Dundee area will all be required for the staffing of the post-economy schools and will only be recruited for a local college, this idea of centralization in big colleges, like the idea of big classes, is contrary to the spirit of true education. The Edinburgh and Glasgow centres are already overgrown and are spiritually less effective than they should be on that account. If there is to be centralization at all, it would be better to send it in the opposite direction. There is talk of bringing all students in training for secondary schools into one or two centres—which, being interpreted, means Edinburgh and Glasgow. If Dundee and St. Andrews can accommodate them, why not send them there for their general training, and confine the practical work, for which there are special facilities in the other cities, to a few

Prizes

THE BEST BOOKS IN
BEAUTIFUL BINDINGS.

The Catalogue of Rewards

Bound in Leather and Fancy Bindings,

issued by the E.S.A., is the most comprehensive of its kind, and contains a choice selection of Books in every branch of Literature, including Biography, Travel, Romance, History, Poetry, Adventure, Science, Essays, Belles Lettres, Fairy Tales, Natural History, &c., &c.

The Catalogue contains particulars of

A Large Assortment of Bindings,

including books bound in Full Morocco, Full Calf, Tree Calf, Victorian Calf, Antique Calf, Padded Paste Grain, Paste Grain, Half Morocco, Half Calf, &c.

Only Books of undoubted excellence and of
good taste, by

STANDARD AND MODERN AUTHORS,

are included in the Catalogue.

The books are catalogued, in order of price, under their respective bindings, so that a selection of a book bound in any particular binding at a given price can be easily made.

Prices range from 5/6 each upwards.

The Catalogue will be sent free on application to

The Educational Supply Assocⁿ Ltd

40-44 HOLBORN VIADUCT, LONDON, E.C.1.

weeks at the beginning or end of their course? The same plan might, with advantage, be followed in regard to the training of the comparatively small numbers of Chapter VI students, like the manual instructors, now required to maintain the supply of specialist teachers.

The trouble anticipated from the issue of Circular 51 regarding the treatment of necessitous children has not been long delayed. This month the education authorities up and down Scotland have been discussing the situation created by the unwillingness of the parish councils to undertake responsibility for the proper feeding and clothing of children whose parents come under the Poor Law. The reports of their discussion do not make very pleasant reading. They are naturally concerned about children under their care coming to school badly fed and clothed. But most of them stand in fear of the cost of relief being surcharged by the Department's auditor at the end of the year, and shrink from any action beyond seeking conferences with parish councils which have no desire to confer with them. That of course means that the children will have to go cold and hungry for economy's sake. In these circumstances the Glasgow Education Authority, after asking for a conference with the Parish Council three times, and having their request refused on the ground that a meeting would serve no useful purpose, sent a deputation to confer with Dr. Macdonald, the secretary of the Education Department, and with members of the Scottish Board of Health. The upshot of this conference was the re-affirmation of the fact that Circular 51 was simply an interpretation of the law as it stands, and that it must be acted on whatever the consequences. The point was raised whether pending continued negotiations between parish councils and education authorities which might be protracted, and pending subsequent procedure if Government bodies intervened, education authorities might be permitted to continue to feed children reported to them as unable, by reason of lack of food, to take full advantage of the education provided. The Secretary of the Scottish Education Department, however, replied quite definitely: "You have the circular of the Department before you and our auditor will require to take steps if you act contrary to it." Following on this conference the Edinburgh Authority has resolved to continue the feeding of the children in the meantime, and to ask the parents to pay, conveniently ignoring the fact that the parents in question simply cannot pay. The Aberdeen Authority has taken the bolder step of disregarding the circular by agreeing to carry on as before. If other authorities follow suit, the auditor may find it difficult to make his surcharge effective.

IRELAND.

Both in the North and in the South of Ireland teachers are waiting anxiously to see what the new Governments propose to do with Education. In the North a Commission has been appointed and reported. In the South the Government has not advanced so far. Even if it intends to appoint a Commission, it has not the power to pass a Bill this year. Its time is occupied with passing its constitution, and before it can legislate on anything, this must be established and its lower and upper houses must come into existence. Certain interesting things, however, have happened. When the Parliament or Dail, elected in June under the Treaty with Great Britain, met in September, the Provisional Government was reorganized and a new Minister of Education was appointed, Prof. J. McNeil of the National University. He was Speaker in the last Dail, and his successor as Speaker in the new Dail is Prof. Michael Hayes, who was the old Dail's Minister of Education. The Minister of Education in the Provisional Government—Mr. Lynch—gives up this post and becomes Minister without portfolio. Teachers will regret the loss of Prof. Hayes to education, as he had shown sympathy with their needs and had thrown himself into the task of reorganizing secondary education on broad, reasonable lines. He was inspiring general confidence. His successor has made up to the present no pronouncement on education. Under the Treaty it was agreed that the Universities should have representatives in the Senate, and this proposal was incorporated in the Constitution—four for Dublin University and four for the National University. After a discussion in the Dail this has been changed. The Universities have foregone representation in the Senate, and have obtained, instead, three representatives each in the Dail, where their influence will be more effectively felt. Lastly the President, Mr. Cosgrave, in introducing estimates, stated that the amounts to be spent on Education during the present financial year were: for Universities and Colleges, £110,800;

for public Education, £3,863,921; for Intermediate Education, £132,750; and for Science and Art, £180,118. Some questions have been asked in the Dail about the position of Secondary School Teachers, and it has been stated that the reform of education will be one of the first subjects on which the Dail will legislate after the constitution is set up. Two Government colleges have been closed—the Marlborough Street Training College for Primary Teachers permanently, it being no longer necessary; and the Royal College of Science temporarily, its classes being housed elsewhere, it is said, on account of the discovery of a plot to blow it up.

In the North the Government has promised to introduce an Education Reform Bill next year, to be based on the Report of its Departmental Committee. This report published at the end of August puts its recommendations under the following heads: the Ministry and the Advisory Council; local organization; organization of the educational system, including such matters as compulsory attendance, religious education, and the staffing of schools; school buildings; secondary and technical education; pensions; special schools; meals for necessitous children and medical inspection and treatment; and finance. An advisory council is suggested to consist of thirty-three members including representatives of local committees, teachers, churches, boards of governors, and managers. The local committees for primary education should represent areas smaller than a county, and should have wide powers over the schools in their respective areas. In religious education the committee is in favour of combined literary and moral and separate religious instruction to children of the same persuasion, so far as possible in the same school, upon the fundamental principle that no attempt should be made to interfere with the peculiar religious tenets of any description of Christian pupils. For registered secondary school teachers the following scale of salary is suggested: For men £240 per annum, rising by annual increments of £15 to £500; and for women £225 rising by annual increments of £15 to £400. For preparatory schools: men £170 to £400, and women £150 to £325. There are proposals for the application of these scales to schools conducted by religious communities. A pension scheme is recommended; also a scheme of county scholarships to enable pupils of primary schools to pass to secondary and technical schools and thence to the universities.

The results of the Intermediate Examinations in the South of Ireland appeared at intervals during September, delay in publication being due to the outbreak at the end of June which interfered with the collection of the candidates' papers. In the North publication was also interfered with by a printers' strike. The number examined by the Intermediate Board in Dublin was 10,014, viz. 6,133 boys (Senior Grade 940, Middle Grade 1,722, and Junior Grade 3,471) and 3,881 girls (Senior Grade 438, Middle Grade 1,050, and Junior Grade 2,493), and 4,971 passed, viz. 3,127 boys (Senior Grade 569, Middle Grade 758, and Junior Grade 1,800), and 1,844 girls (Senior Grade 205, Middle Grade 492, and Junior Grade 1,147), the percentage of passes being 51 for boys and 46 for girls; 537 boys obtained honours (less than 9 per cent), and 286 girls (a little over 7 per cent). Boys were awarded 173 exhibitions and 191 prizes, and girls 35 exhibitions and 75 prizes. The distinctions for girls were nearly all in the Modern Literary group, 93 out of 110; there were none at all in classics. The boys' awards were distributed fairly evenly through all the groups.

The Rules and Programme of the Intermediate Schools in South Ireland were published in September, and although in the main they follow the lines of previous syllabuses, there is sufficient indication of part of the policy of the Provisional Government's Ministry of Education. Irish and English become alternative subjects essential for passing, and History and Geography, previously part of the English course, become a separate pass and honours subject. In Irish and English a student must obtain at least 20 per cent of the marks awarded to composition, but a similar provision that used to apply for a pass in other languages is dropped. All the mathematical subjects are grouped together, and a student must obtain at least 30 per cent of the total marks in those that are compulsory, with this proviso, that he must not obtain less than 20 per cent in any one of them. The obligatory subjects are A, Irish or English; B, mathematics; C, one language other than that taken in A; and D, two other subjects except when Latin or Greek is taken under A, in which case one other subject will be sufficient. A student may pass if he fails in any one obligatory subject.

other than mathematics, provided that he obtains at least 20 per cent in it. It will be seen that Irish takes pride of place side by side with English, and is thus given great encouragement. It will also be seen that the conditions of passing are made easier. There was room for this when the low percentage of passes is considered. Whether they will prove too easy remains to be seen. In the Programme itself, in addition to the separation of history and geography as a separate subject, two points call for remark. In the Junior and Middle Grades the English poetry prescribed is largely of an Anglo-Celtic character and not representative of English at its best. In the courses in modern languages (other than English and Irish) the Ministry decries translation from or into the language, retaining it only in Middle Grade honours and Senior Grade pass and honours. Surely it would be a mistake if the reading of standard authors of foreign languages is to disappear from the Junior Grade and from Middle Grade pass.

The Registration Council has issued two new regulations.

Registration. One is the addition to the register of a column containing the total number of completed years of service in teaching in recognized schools. The other is that for purposes of teaching experience, the required period may be reduced where the experience has been necessarily interrupted by military service or for political reasons since August 1, 1914.

FOREIGN AND DOMINION NOTES.

GERMANY.

In Berlin and in other parts of Germany a winter of some distress is feared. Good storm-signals are the rising salaries of teachers and other officials. For July the *Teuerungszuschlag*, or allowance for increased cost of living, was 160 per cent of the total salary; for August it was 185 per cent. Mercilessly the printing press turns out the paper money required to pay the new rates, and the poor teacher sees visions of a salary so vast that he must necessarily starve on it. But we will not linger on this economic question, turning rather to indicate a new development. In the assassination of Dr. Rathenau the Republican Government saw a menace to the existence of the Republic and, seeking measures of defence, addressed itself, through the States, to the schools. Prussia has passed a Law relating to the Duties of Officials, under which a teacher who favours or advocates reactionary efforts is guilty of a breach of his official duty, and, upon a second offence, may be dismissed from office. In the secondary schools are many monarchical teachers and pupils. The Ministerium für Volksbildung of Thüringen sends us the first number of a little journal, *Republik und Jugend*, in which the pupils of such schools are told plainly this: "If the spirit of unscrupulous political agitation is not extinguished in the schools, the Government will find means to replace the young who are hopelessly engaged in hostility to the existing order by others, and will open to another social class the access to the leading places in public life." Now, in so far as the teacher (who is the guide of the pupils) is prohibited from attacking the Constitution, the German attitude will be generally approved; he should not be compelled, however, to active propagation of the new doctrines. For the rest, the party fight for dominion over the young is attended by some strange manifestations. You may read of democratic students at Jena demanding that universities where anti-republican opinions are tolerated should be closed forthwith, whilst a Republican Jugendbund called "Schwarz-Rot-Gold" clamours for the removal of the word *Königlich* from the entrance-gate of the famous Joachimstal Gymnasium at Templin. This journal has no politics, having learned how often politics prove injurious to education, and we write of the German movement quite impartially.

The Reichstag has adopted the view that the fact of *uneheliche Mutterschaft* in a woman official is not by itself a ground for the initiation of disciplinary measures against her. A teacher is an official, and the Association of German Evangelical Women Teachers has published a protest against the recognition of an unmarried mother as a fit teacher of the young. Later news is that the Reichsrat has made formal objection (*Einspruch erhoben*) to the decision of the Reichstag; so that under Article 74 of the New Constitution further deliberations will be necessary.

Four hundred years ago, in the Spring of 1522, two students journeying to Wittenberg, came on a mysterious traveller, who questioned them about Erasmus of Rotterdam at Basel, and talked of the two Schürfs at Wittenberg and of young Philippus Melanchthon teaching Greek there. Now, this mysterious traveller was Martin Luther, himself bound for Wittenberg from his Patmos, the Wartburg, where he had begun the work of translating the Bible; and a very notable thing that he presently did at Wittenberg was to publish anonymously his version of the New Testament. "Das neue Testament, Deutsch, Vuittemberg" (without printer's name) appeared on September 17, which day, upon the impulse of a Committee representing the German Bible Societies, has just been celebrated with Divine services in many churches, commemorative meetings, and so forth; whilst one of the editors of the Weimar "Luther" has sent forth a pamphlet, "Luther's September-Testament in seinen und seiner Zeitgenossen Zeugnissen." Of Luther's theology—derided by Young Germany—it lies not in our province to discourse. We may properly, however, recall him to memory as the reformer of the German language and the first great translator. "Ex abundantia cordis os loquitur" must not be rendered, he said, by "Aus dem Überfluss des Herzens redt der Mund," but by "Wes das Herz voll ist, des geht der Mund über"; it is an illustration of the method he pursued in making a translation which was literature, and a mighty mother of literature.

FRANCE.

Primary schools serve as a gauge of a nation's prosperity; in France a review of such schools is not wholly satisfactory. The enrolment on the first school day of December, 1921, was, in public primary schools, 3,574,303 pupils and, in private schools, 877,546. The figures show a decrease for the year; for at the same time in 1920 they were respectively 3,783,106 and 926,730, the loss being thus 5.5 per cent in the public, and 5.3 per cent in the private primary schools. The cause of the reduced enrolment is the decline of the birth-rate during the war—a decline which will produce its effects for some years and is of much gravity for France. Again, the attendance, in spite of efforts to improve it, is still poor; on the day in question 10 per cent of the enrolled were absent from the public and 9.4 per cent from the private schools. Now, December is the month when French children go to school most regularly; so that the absence from school in it of one child out of every ten proves that France has still to go far before the principle of obligatory school attendance becomes the practice.

The *Revue Pédagogique* (LXXXI, 8) publishes the last of a series of articles on "L'art éducateur," by M. D. Parodi. The writer emphasizes the importance of art where formal religion has waned: "C'est par là qu'il faut essayer de donner à l'enfant l'équivalent de ce que lui donnaient, au Moyen Age, dans un autre état social, les cérémonies du culte." Perhaps the influence of art in the moral world has not yet been adequately realized, and especially not in primary schools. Let us quote M. Parodi's closing words: "La volonté de beauté chez l'homme se confond en dernière analyse et dans sa direction finale avec la volonté du mieux, du bien, de la justice, avec le sentiment religieux dans sa plus large et plus profonde acception. Et ainsi tout ce que nous ferons pour cultiver le sentiment esthétique sera fait pour cultiver le sentiment moral, le plein sentiment de notre caractère d'homme."

UNITED STATES.

It is the tendency in journalism for the photographer to encroach on the penman's ground. The American *Educational Review* takes the lead in pedagogy-by-picture and through it the contemporary schoolmen of the United States are exhibited to the world in informative portraiture, as were few of the older pedagogues—Pestalozzi a notable exception. The first portrait in the September number (LXIV, 2) is that of Dr. William B. Owen, who was elected by the National Education Association at its Boston Meeting to be its President for the ensuing year. From the text of the *Review* we learn that at Boston the great theme discussed was "Education and the Democratic Awakening"; whilst the Association pronounced in favour of the Towner-Sterling Bill to establish a Federal Department of Education, with a secretary having a seat in the President's

Cabinet. Yet it does not seem that the measure, which has long been hovering in the air, will be brought down and pinned to the Statute book within any certain time. It is curious that Catholics should see in the Bill "a dangerous thrust at the heart of the Republic," "the first step in the process of forcing every American child out of a private and into a public school"; as if the cautious step towards centralization of vision were prompted by an intention to impose a universal State system of education. In point of fact, local liberty is carefully guarded. Making direct appeal to English readers is the announcement in the *Review* that the lectureship of American history, literature, and institutions, endowed three years ago by Sir George Watson for the English universities, will be filled during the summer of 1923 by President Butler of Columbia University. Of the articles, that headed "Shall we read Literature in Translations?" is of the widest interest, its author upholding the originals against the reproducers. We remark that not only Shelley but Dante long before him maintained that poetry at any rate cannot be translated: "Nothing that has the harmony of musical connexion can be transferred from its own tongue into another without shattering all its sweetness and harmony" ("Convivio," i, c. 7). As for literature in general, it may be likened to a circus; those who cannot pay to go in at the doors may look through holes in the canvas.

It was complained in New York that some of the school history-books disparaged famous Americans, and that others were instruments of propaganda. A committee appointed to probe the matter reports: "There is no evidence to support the charge that the text-book writers whose books were examined were intentionally unpatriotic. However, the paragraphs complained of in their books indicate an attitude of mind towards the founders of the Republic which, in our judgment, is entirely reprehensible." Among the things condemned are the statements: "Jefferson was a demagogue, a liar, and an atheist"; "John Hancock was a smuggler"; and "Samuel Adams was a political boss"; and the use of cartoons of Lincoln and Wilson. One writer, in describing the Battle of Lexington, says that Hancock and Adams "stole away across the fields"; whereas in the opinion of the committee we should read: "were persuaded to retire to a more secure place." Historians, we may remark, are encompassed with difficulties: if they confine themselves to the truth they must often be distressingly brief, and impartiality is wont to render them uninteresting. The character of every man is complex, and a historical personage is described more faithfully by his deeds than by epithets laudatory or abusive. Let us be tender to the memory of notable villains, as well as to the memory of Jefferson, Hancock, and Adams.

About Text-Books of History.

INDIA.

The study of dreams, to be really fruitful, needs to be preceded by a study of the dreamers. How far is the narrator of a dream by nature or through habit tainted with unveracity? Does not the most truthful reconstruct as he narrates, give distinctness to what was vague, combine images that were floating and detached? As to children's dreams in particular, the morning story of an imaginative child cannot be unconditionally accepted as exactly reproducing the vision of the night. "The Dreams of Indian Boys" form the subject of an article in *Indian Education* (XX, 12) and the writer compares his results (got from not numerous inquiries) with those of Dr. Kimmins, Chief Inspector of the London County Council. It seems that there is a larger proportion of "fear dreams" in the case of Indian boys. English boys dream of unfulfilled wishes more often than Indian, and, nourished with books of adventure, they perform in their sleep more deeds of valour. "Kinaesthetic dreams," which Dr. Kimmins found to grow more numerous as age advanced, are of rare occurrence in Indian boyhood. But the Indian material—we have not the English before us—reveals, above all, the necessity of such preliminary studies as those which we have indicated. A boy of fourteen related: "In a dream my father asked me to fetch two rupees' worth of sugar from the bazaar. But he spoke to me in such a low tone that I could not understand him." Had he told that dream to Kennedy at Shrewsbury he would have rued it.

Dreams of Indian Boys.

Many a young English teacher laments the hardness of his fate. To bestow consolation by the comparative method we take from *Education* (Allahabad, i. 6), an account of the perils to which, as it is stated, a teacher in the United Provinces is exposed. "His reputation and honour are not in safe keeping,

A Perilous Career.

as they are in the hands of school boys. He must exercise the greatest tact in handling them, otherwise he would be proclaimed to be either a cruel teacher or a weak one. In both cases he is sure to receive anonymous letters full of threats and warnings. When the boys take it into their heads to disgrace the schoolmaster, it is easier done than said. He may walk in a lane and may be bathed with a bucketful of dirty water from some invisible window. He may go for a walk when a blanket may be thrown over his head in the way and his body belaboured. He may come to school when a shoe may be flung at him from behind to the great joy of street urchins. If he plays hockey or is present at the play ground, there is every probability of his being hit with the ball to the detriment of his bones and vital organs."

SOUTH AUSTRALIA.

The Education Regulations (July 5, 1922) having reference to the establishment of high schools show how Australia proceeds in diffusing education. The Minister, it is laid down, may establish separate high schools on condition (a) that there is evidence of a probable attendance of at least forty pupils; (b) that land of not less than five acres in area is provided locally, the ownership of it being vested in the Minister; and (c) that a sum of not less than one thousand pounds is contributed by the public towards the cost of school buildings. Observe that the schools are not imposed on local communities; these become themselves conscious of a want and address themselves to make it good.

PRIZE COMPETITIONS.

One of the winners of the Summer Competition is Miss M. E. Duke, Peel Cottage, Campden Hill, W. 8.; we have not heard from the other.

The prize for the October Competition is awarded to "Theta"; *proxime accessit*, "Mic."

EXTRACT FROM BOSSUET'S "ORAIISON FUNÈBRE D'HENRIETTE MARIE DE FRANCE."

By "THETA."

There came forth a man of incredible depth of character, no less refined as a hypocrite than dexterous as a politician, whose enterprise was equalled by his dissimulation, of energy indefatigable alike in peace and war, leaving nothing to fortune of which counsel and foresight could deprive her, while the chances which she offered were invariably accepted by his unscrupulous vigilance; in fine, one of those bold and restless characters who seem destined to transform the world. Desperate is the fate of such men and history can record many a victim of their audacity. But great also are their achievements, when God is pleased to make use of them. Unto this man power was given to deceive nations and to prevail against kings. He had observed that amid a multiplicity of sects unrestrained by definite rule, men were fascinated by the pleasure of enouncing dogmas, unchecked and unproved by any ecclesiastical or secular authority; by working upon this weakness, he transformed the totality of these absurdities into a formidable unity. The mob, once induced to swallow the bait of liberty, will follow blindly, wherever it hears this catchword. Absorbed in this first delight, the people went forward, unwittingly advancing to servitude; their subtle guide fought and preached, counterfeited divers characters, posed as prophet or divine, as soldier or captain, until he saw that he held men spellbound, that he was regarded by the army as a leader sent by heaven to guard their independence; then he began to realize that he could drive them even further. I will not recount the motley succession of his enterprises, his famous victories, those outrages upon morality, nor the long peace which astounded the universe. Thus was God minded to teach kings never to desert His Church.

It was difficult to decide between the first two versions. "Mic's" was the more blameless, but the strength and terseness of the prizewinner's copy carried the day. He used 300 words as against the other's 400. But he has taken some needless liberties with the text. *Que le sort de tels esprits est hasardeux* should be "how full of peril is the lot of such characters." "The totality of these absurdities" is not a very lucid phrase and scarcely translates "*un monstrueux assemblage*"; say,

(Continued on page 718)

Cambridge University Press

CAMBRIDGE NATURE STUDY SERIES

General Editor: HUGH RICHARDSON, M.A.

Large Crown 8vo. Illustrated.

Lessons on Soil. By E. J. RUSSELL, D.Sc. With 58 illustrations. 3s.

"Not only practical and informative, but designed to arouse the inquiring instinct."—*Nature*.

The Gateways of Knowledge. An Introduction to the Study of the Senses. By J. A. DELL, M.Sc. With 51 figures. 3s 6d.

"Deserving of the highest praise. The text is most clearly written."—*Nature*.

The Story of our Trees. In twenty-four lessons. By M. M. GREGSON, B.A. With frontispiece and 74 figures. 3s 6d.

"Mrs Gregson's clear and exact work, and the excellent drawings and photographs by which it is profusely illustrated, should be of great use to the teacher, as well as the pupil."—*The Athenaeum*.

Weeds: Simple Lessons for Children. By R. L. PRAEGER. With 45 figures and 3 plates. 2s 6d.

"Appears to us to be very educative in the truest sense—for the teacher. . . . The book is uncommonly well done."—*Nature*

Educational School Gardening and Handwork. By G. W. S. BREWER, F.R.H.S. With an Introduction by the Rt Hon. HENRY HOBHOUSE. With 72 illustrations. Crown 8vo. 5s net.

"One of the most delightful and at the same time most sensible books on the subject of school gardening. . . . It lays great stress on the connection of the garden with the school. . . . We commend Mr Brewer's book to all teachers interested in handwork and school gardening."—*The Secondary School Journal*.

Domestic Economy. A Text-book for Teachers and Students in Training. Third Impression. 4s 6d. In 2 parts. Crown 8vo. Part I, Theory, by MARION GREENWOOD BIDDER. 2s 6d. Part II, The Practice and Teaching of Domestic Economy, by FLORENCE BADDELEY. 2s 6d.

"All who are interested in 'domestic science,' and the practical application of it, should give the book a place where it may be used for daily reference."—*The Bookman*.

The Work of Rain and Rivers. By T. G. BONNEY, Sc.D. 2s 6d net.

The Natural History of Coal. By Dr E. A. NEWELL ARBER. 2s 6d net.

The Natural History of Clay. By ALFRED B. SEARLE. 2s 6d net.

Pond Problems. By E. E. UNWIN, M.Sc. With frontispiece and 48 illustrations. 3s.

"The illustrations are beautiful and clear, and the whole book deserves strong recommendation."—*School Nature Study*.

Bird Studies. In twenty-four lessons. By W. P. WESTELL, F.L.S., M.B.O.U. With frontispiece, 49 illustrations, and a map. 3s 6d.

"An admirable little book. . . . Each lesson is described with materials required, information, and problems."—*The Times*.

Nature Study Lessons. Seasonally arranged. By J. B. PHILIP, M.A. With 23 illustrations. 4s 6d.

"The child of from 12 to 14 years of age who works through its pages in the course of a year will not merely have learnt to observe, but also will have gained a firm grasp of fundamental botanical principles."—*Nature*.

The Study of the Weather. By E. H. CHAPMAN, M.A., D.Sc. Large crown 8vo. With 56 illustrations. 4s.

"For school use, this is, without doubt, the best book yet published on the subject."—*The Journal of Education*.

A Book of Simple Gardening. Especially adapted for Schools. By DOROTHY LOWE. With 2 plates and 19 text-figures. Fcap 4to. 3s 9d.

This book has been written with three objects in view: (1) To teach each child to garden. (2) To produce an attractive garden for which children are collectively responsible. (3) To give a sound foundation of practical work and artistic effects, so that at the end of their school career a boy or girl should be capable of managing any garden for which they become responsible, either by their own work, or by gardeners under their orders.

Domestic Science. By C. W. HALE, A.K.C. Crown 8vo. Part I. With 102 illustrations. 6s net. Part II. With 81 illustrations. 7s 6d net.

"The subject matter of the book is admirably chosen and arranged, and it is presented in a very clear and simple style. . . . Details are so fully given that it will prove of great value, not only to the student, but perhaps, even more to the instructor. . . . We cordially recommend the book to all teachers of preliminary science."—*The Technical Journal*.

Earthworms and their Allies. By F. E. BEDDARD. 2s 6d net.

Spiders. By C. WARBURTON, M.A. 3s 6d net.

Bees and Wasps. By O. H. LATTER, M.A. 2s 6d net.

Cambridge Manuals of Science and Literature Series
Complete List on application

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

rather, "a monstrous rout." "The motley succession of his enterprises" is hardly English, and "*trop fortunée*" is omitted; translate "I will not recount the whole series of his undertakings, which were only too successful" (or "alas! they were only too successful"). *Dont la vertu était indignée* "by which virtue was insulted" or "outraged." The last sentence should run, "It was God's plan for teaching . . ." We note two other points which presented a little difficulty; *par là* must be translated freely "by indulging them in this" or as in the prize version; *Ceux-ci* is not strictly grammatical, the sentence *quand une fois . . . le nom* separating it from its antecedent, and is best changed into a noun.

There were quite a number of competitors who lost their way in the labyrinth of the sentence beginning *leur subtil conducteur*.

We classify the 74 versions received as follows:

Class I.—(a) Theta, Mic, Menevia, F. W. Macnamara, Gobelins, Esse quam videri.

(b) Bésigue, E. M. H., Tyssul, J. H. M., Chauve-souris, Vendanges, V. N., Berkshire Lass, A. G. J., Penguin, M. L.

Class II.—(a) Woodlea, Festus, Jo-anne, J. D. F., Klep, L. S. d., Maridunum, M. J. L., Katty Ann, L. E. B., Pip, L. M. B., Emil Jay, M. V., Anatole, G. V., Kappa, C. A. W., Aspirant, P. H. M., Loo, Chingleput, G. G. G. M., Gabriel, R. H. A., Loyalty.

(b) Lupine, Taugenichts, Frankland, Dogged, B. W., Hibernia, Sirach, Florah, Lucinda, H. C. M., Dr. Dee, Dane, Leander, Micky, Myra Han, C. Bevan, Clef.

Class III.—C. A. P., Carlyle, S. J., Spiro, B. B., Nana, A. C. S., Lehted, Primrose, G. H.

Class IV.—G. M. S., Kit, G. G., E. F. L.

A Prize of Two Guineas is offered for the best translation of the following sentences from French authors:

C'est un instinct des femmes dans tous les pays d'ajouter la coquetterie à la nature. . . . Dieu les a faites belles, cela ne leur suffit pas, elle se font jolies. (*V. Hugo.*)

La belle folie de vingt ans, le dédain du monde entier, la seule passion de l'œuvre, dégagée des infirmités humaines, mise en l'air comme le soleil. (*Zola.*)

Sachez mourir de faim; c'est le premier des arts, puisqu'il donne la liberté de l'âme. (*Michelet.*)

Le tocsin qu'on va sonner n'est point un signal d'alarme, c'est la charge sur les ennemis de la patrie. Pour les vaincre, il nous faut de l'audace, encore de l'audace, toujours de l'audace, et la France est sauvée. (*Danton.*)

Je sais que jamais un vrai grand homme n'a pensé qu'il fût grand homme, et que, quand on broute sa gloire en herbe de son vivant, on ne la récolte pas en épis après sa mort. (*Renan.*)

La haute industrie, comme la vieille noblesse qu'elle remplace, fera sa nuit de 4 août. (*Anatole France.*)

Qu'est-ce qu'un honnête homme? Quelqu'un qui possède un ensemble de vertus religieuses, sociales, domestiques, parfumées de délicatesse. (*Roux.*)

Le sot qui a beaucoup de mémoire est plein de pensées et de faits; mais il ne sait pas en conclure: tout tient à cela. (*Vauvenargues.*)

La raillerie naît d'un mépris content. (*Vauvenargues.*)

L'homme digne d'être écouté est celui qui ne se sert de la parole que pour la pensée, et de la pensée que pour la vérité et la vertu. (*Fénelon.*)

La pitié est souvent un sentiment de nos propres maux dans les maux d'autrui. C'est une habile prévoyance des malheurs où nous pouvons tomber. (*La Rochefoucauld.*)

Notre histoire politique des cent vingt dernières années se résume dans ce paradoxe irréductible, énervant et stérile, loger un individu parfaitement libre, heureux et satisfait dans un état puissant, omnipotent et autoritaire. (*Maurice Caudel.*)

Les députés ouvriers qui arrivent au Parlement s'embourgeoient vite, au mauvais sens du mot; ils perdent leur sève et leur énergie première, et il ne leur reste plus qu'une sorte de sentimentalité de tribune. (*Jean Jaurès.*)

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on November 14, address ed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

FREE PUBLIC LECTURES.

[Under this heading a list of free public lectures of especial interest to teachers will be published month by month. The figure in parenthesis indicates the number of a lecture if it is one of a series. Titles of lectures for possible insertion in this list should be received at the Journal office not later than the middle of the month preceding that in which the lecture is to be delivered.]

NOVEMBER 1.

KING'S COLLEGE, at 4.30.—Dr. C. Da Fano: *Histology of the Nervous System* (2). Also on November 8, 15, 22, and 29.

KING'S COLLEGE, at 5.30.—Prof. P. Vaucher: *The Influence of Modern France on British History* (4).

UNIVERSITY COLLEGE, at 5.30.—Dr. Harting: *Holland, the Land and the People*. UNIVERSITY COLLEGE, at 5.30.—Mr. Stephen Jones: *Some Recent Results in Experimental Phonetics*.

GRESHAM COLLEGE, at 6.—Rev. W. H. Thompson: *Divinity* (Gresham Lecture) (2). Also on November 2 and 3.

NOVEMBER 2.

UNIVERSITY COLLEGE, at 5.—Prof. F. Y. Eccles: *Molière* (4). Also on November 9, 16, 23, and 30.

KING'S COLLEGE, at 5.30.—The Rev. W. R. Matthews: *Aristotle* (Boyle Lecture) (3).

KING'S COLLEGE, at 5.30.—Prof. H. Wildon Carr: *The New Method of Descartes and the Problems to which it gave Rise* (9). Also on November 3.

KING'S COLLEGE, at 5.30.—Baron A. F. Meyendorff: *Russian Reconstruction* (4).

UNIVERSITY COLLEGE, at 5.30.—Prof. Cippico: *Vernioni Italiane dello Shelley*. UNIVERSITY COLLEGE, at 5.30.—Prof. E. G. Coker: *Recent Photo-Elasticity Researches in Engineering Problems*.

CENTRAL LIBRARY, Fulham, at 8.—Miss A. Abram: *Social Life in England in the Middle Ages*.

NOVEMBER 3.

KING'S COLLEGE, at 5.30.—Prof. R. W. Seton-Watson: *Austro-Hungarian Foreign Policy since 1867* (4).

UNIVERSITY COLLEGE, at 8.—Prof. G. Dawes Hicks: *The Philosophy of Religion* (1). Also on November 10, 17, 24, and December 1.

NOVEMBER 4.

HORNIMAN MUSEUM, Forest Hill, at 3.30.—Miss E. Lovett: *The Folk-lore of the Cat*.

NOVEMBER 5.

MARY WARD SETTLEMENT, Tavistock Place, at 8.30.—Mr. Denyer: *St. Pancras in the Past*.

NOVEMBER 6.

LONDON SCHOOL OF ECONOMICS, at 5.—Prof. Eugene Borel: *The Position of Switzerland in International Law*.

KING'S COLLEGE, at 5.30.—Dr. Vočadlo: *Slavonic Studies since the Time of Josef Dobrovsky* (1). Also on November 13 and 20.

GRESHAM COLLEGE, at 6.—Sir Frederick Bridge: *Music* (Gresham Lecture) (1). Also on November 7, 8, and 10.

NOVEMBER 7.

SCHOOL OF ORIENTAL STUDIES, at 5.—Prof. Alice Werner: *Some Bantu Tribes of the Tanganyika Territory* (3). Also on November 21.

KING'S COLLEGE, at 5.—The Rev. A. C. Headlam: *The Education of Jesus* (2).

KING'S COLLEGE, at 5.15.—Mr. E. F. Jacob: *John of Salisbury and the Polycraticus* (3).

UNIVERSITY COLLEGE, at 5.15.—Prof. H. D. Gray: *American Women Novelists* (4).

KING'S COLLEGE, at 5.30.—The Rev. P. Dearmer: *Early Flemish Painting* (15th and 16th Century Art) (5).

KING'S COLLEGE, at 5.30.—Sir Bernard Pares: *Contemporary Russia from 1861* (5). Also on November 14, 21, and 28.

UNIVERSITY COLLEGE, at 5.30.—Mr. J. H. Helweg: *Medieval Danish Ballads* (1). Also on November 14, 21, and 28.

NOVEMBER 8.

UNIVERSITY COLLEGE, at 3.—Prof. E. G. Gardner: *The Arthurian Legend in Italian Literature* (1). Also on November 22.

KING'S COLLEGE, at 5.30.—Mr. F. A. Kirkpatrick: *Spanish Influences on British History* (5).

UNIVERSITY COLLEGE, at 5.30.—Mr. I. C. Gröndahl: *Norway* (1). Also on November 15, 22, and 29.

UNIVERSITY COLLEGE, at 6.15.—Mr. A. W. Flux: *The Foreign Exchanges* (Newmarch Lectures) (1). Also on November 15, 22, and 29.

NOVEMBER 9.

UNIVERSITY COLLEGE, at 5.15.—Prof. J. E. G. de Montmorency: *Customary Law in London and other English City Areas* (1). Also on November 16, 23, and 30.

FOR SALE.

Private Day School

(76 SCHOLARS)

Boys and Girls from 5 years to 14 years of age.

Fees £1 10s. 0d. to £2 8s. 0d. per term.

Established over 40 years.

WELL-BUILT MODERN HOUSE, every convenience, accommodation if desired for few boarders. Situated in centre of well-populated respectable industrial neighbourhood. Intending pupils refused admission each term. Sound investment. For details as to goodwill, rent, and receipts apply—

M. A. ARMSTRONG,
110 Hulton Lane, Bolton.

SCHOOL PREMISES.

ISLE OF WIGHT.—For disposal, house containing 30 bedrooms, 3 bathrooms, 2 reception-rooms, and complete domestic offices. Gardens of about 2 acres. Suitable for Girls' or Boys' School. Price, £6,000 freehold—£2,000 down and balance on mortgage at 4½ per cent. Ideal situation.—Address, GRIFFITHS, POWELL & SMITH, 12 and 13 Henrietta Street, London, W.C. 2.

WITHIN convenient reach of London.—Transfer or Partnership. High-class Boarding School for Girls. Established 12 years. Gross receipts past year, about £8,000; average gross receipts past 3 years, about £7,500. Average net profits past 3 years, about £1,000. 38 boarders, paying £83 a term, with extras. Rent of beautiful mansion, with 96 acres of land, accommodation for 50 boarders, held on lease expiring 1931 with option of renewal, £475. Price for goodwill, school, and household furniture, about £5,000, or the vendor would sell a half-share of goodwill and furniture for about £2,000. We have personally inspected the school and premises, and have no hesitation in advising immediate treaty.—Address, GRIFFITHS, POWELL & SMITH, School Transfer Agents, 12 and 13 Henrietta Street, London, W.C. 2.

NORTH WALES (Seaside).—For disposal, high-class Boarding School for Girls, recently recognized by the Board of Education. A few day pupils are taken by special arrangement. The school has been established about 40 years, and has been conducted by vendors about 21 years. Gross receipts about £3,000. The net profits are given as £500, but they are exclusive of the living expenses of the vendors. The pupils are drawn from the professions and services; the Irish connexion is also a very good one. There are 25 boarders, paying from £100 to £120 per annum, without extras, and 3 day pupils at £24 per annum. The premises consist of a main building, standing in its own grounds, and two semi-detached villas opposite, also bedrooms in a third villa. Rent, £232. Two Principals and an aged mother have made accommodation restricted, and a rearrangement allowing one good bedroom for the Principal would allow for at least six more boarders. The houses let well (furnished) in the holidays. The locality is highly recommended by the medical profession for its well-known salubrity and sunny and bracing climate. Price asked for goodwill, about £800. School and household furniture has lately been valued at £1,427 19s. 9d., but the private furniture is not for sale. The vendors are willing to make very reasonable arrangements for the payment of purchase money.—Address, GRIFFITHS, POWELL & SMITH, School Transfer Agents, 12 and 13 Henrietta Street, London, W.C. 2.

YORKSHIRE.—Girls' Boarding and Day School. Established and conducted by vendors fourteen years. Gross receipts past year, £1,596 10s. 3d.; average gross receipts past three years, £1,493. Net profits past year, £296. Number of boarders, 14, paying from £60 to £75 per annum, and extras; 46 day pupils, paying £6 6s. to £13 6s. 8d. per annum. Rent of two houses combined, containing 13 bedrooms, 4 classrooms, 3 sitting-rooms, dining-room, 3 cloakrooms, kitchens, &c., held on a yearly tenancy, £100. The houses are close to the sea, with good open views. Price for goodwill, about £550. School furniture and most of household furniture at valuation.—Address, GRIFFITHS, POWELL & SMITH, School Transfer Agents, 12 and 13 Henrietta Street, London, W.C. 2.

WELL-ESTABLISHED Day School to be disposed of next Easter. Moderate terms, good house and playground, splendid opening.—Address No. 11,285. *

SMALL Day School and few Boarders for Sale in the Midlands; good leasehold premises; gross receipts, £1,500; price £500.—Address No. 11,286. *

PARTNERSHIPS.

TO PRINCIPALS Schools France or Switzerland.—Lady, having resided many years as Governess in families of high position, desires to join lady with very good-class School as working partner. Offers no cash, but loyal co-operation in all work. Highly successful teacher. Certificated. Prepares for Exams. Excellent references.—Write, G. W., Willing's, 33 Knightsbridge.

ASSISTANT MISTRESSES AND GOVERNESSES.

Messrs. GABBITAS, THRING & CO.,

36 SACKVILLE STREET, LONDON, W. 1,

Invite applications from qualified Ladies who are looking for posts in the Teaching Profession.

This Agency, which is under distinguished patronage, has been established over 40 years.

The following are some of the Vacancies for Assistant Mistresses for the Spring Term, for which

MESSRS. GABBITAS, THRING & CO. have been asked to put forward candidates:

Classical and General Form Mistresses.

CLASSICAL MISTRESS required in January for important Church of England Public School in the Home Counties. Graduate essential. Post resident and salary according to Burnham Scale.—No. 22,217.

ASSISTANT MISTRESS in January for important Roman Catholic Convent in South Wales. Subjects required Latin and English. Graduate with previous experience looked for, and candidate must be Roman Catholic. Salary from £210 non-resident according to qualifications and experience.—No. 22,224.

CLASSICAL MISTRESS in January for well-known Girls' Finishing School in London area. Graduate essential. Salary from £140, resident.—No. 22,268.

ASSISTANT MISTRESS in January for High-Class Girls' Church of England School in South of England, to teach Mathematics with either Latin or German. Post resident, and good salary according to qualifications and experience.—No. 22,324.

ASSISTANT MISTRESS in January for large Grammar School in Home Counties to teach Junior Mathematics, together with some of the following as subsidiary subjects: French, Games, Drawing. Post non-resident, and salary in accordance with Burnham Scale.—No. 22,332.

ASSISTANT MISTRESS in January for large Girls' High School in the Midlands, to teach English and Latin. She will also be expected to help with the Games. Only candidates with high qualifications will be considered. Post non-resident, and salary according to Burnham Scale.—No. 22,328.

SENIOR ENGLISH MISTRESS in January for small High-Class Girls' Private School in North of England, to teach English, History, Geography, Mathematics, and Scripture. Member Church of England essential. Salary from £130-£150, resident, according to qualifications and experience.—No. 22,330.

FORM MISTRESS in January for large Girls' High School in North of England, to teach Junior Middle School Mathematics, Geography and English and to help with Games. Post non-resident, and salary in accordance with Burnham Scale.—No. 22,311.

ENGLISH MISTRESS in January for small high-class Boarding School in the Home Counties to teach English, History, and Latin. Graduate essential. Salary from £130, resident, according to qualifications and experience.—No. 22,301.

ASSISTANT MISTRESS in January for small high-class Girls' Private School in North of England to teach general subjects, with as many of the following as possible: Latin, History, Mathematics, and Science. Salary from £100-£120, resident, according to qualifications and experience.—No. 22,297.

Mathematical and Science Mistresses.

ASSISTANT MISTRESS in January for large recognized Secondary School in South of England to teach Mathematics and Science, together with Latin as subsidiary subject if possible. Salary about £150, resident.—No. 22,197.

MATHEMATICAL MISTRESS in high-class Girls' Private School on South Coast. She would be expected to teach Mathematics up to Matriculation standard, and, if possible, able to offer subsidiary subjects, i.e. English or

Elementary Latin. Salary about £100, resident.—No. 22,234.

SCIENCE MISTRESS in January for important Girls' Public School in North of England. She must be able to teach Botany up to Scholarship standard together with Zoology up to Intermediate standard. Graduate essential. Post resident, and salary in accordance with Burnham Scale.—No. 22,260.

ASSISTANT MISTRESS in January for Girls' Private Boarding School in Scotland to teach Botany up to Senior Oxford Standard, together with Science, Mathematics, and either History or Geography. Graduate with experience looked for. Salary from £75-£110, resident, according to qualifications and experience.—No. 22,271.

ASSISTANT MISTRESS in January for Girls' Private School in the Midlands to teach Geography as essential subject. Previous experience essential. Salary from £100, resident, according to qualifications and experience.—No. 22,278.

SCIENCE MISTRESS in January for important Girls' Boarding School in the South West of England to teach Chemistry and Physics. Only candidates with high qualifications will be considered. Post non-resident, and candidates in applying are asked to state salary they require.—No. 22,294.

ASSISTANT MISTRESS for large Girls' Private Recognized School in North of England to teach Botany throughout the school together with some subsidiary subjects. Salary from £80-£100, resident, according to qualifications and experience.—No. 22,310.

MATHEMATICAL MISTRESS required in January for a large County School in the Home Counties. The candidate appointed must be an Honours Graduate or equivalent. The post is non-resident and salary offered according to the Burnham Scale.—No. 22,357.

General Junior and Boys' Preparatory Mistresses.

ASSISTANT MISTRESS in Boys' Private School on South Coast to teach French and Music. She should be able to play the Organ and had previous experience in Boys' Schools. Salary about £200, non-resident.—No. 22,264.

ASSISTANT MISTRESS in January for high-class Boys' Preparatory School in South of England to teach Music together with subsidiary subjects, preferably French and German. Salary about £100, resident.—No. 22,220.

JUNIOR ENGLISH MISTRESS for Day School in the Home Counties. Experience essential. Mistress appointed will have her week-ends entirely free. Salary about £75, resident.—No. 22,300.

JUNIOR MISTRESS for Girls' Private School in the Midlands to teach General Subjects, together with as many of the following as possible: Games, Girl Guides, and Music. Salary about £70, resident.—No. 22,304.

LOWER THIRD FORM MISTRESS required in January for an important Girls' Public School near London. The candidate appointed should hold Higher Froebel Certificate or London Matriculation, and she must be a member of the Church of England. The post will be a resident one and a good salary will be offered according to qualifications and experience.—No. 22,358.

CLASS MISTRESS required for an important Girls' Day School in the London District, to teach pupils aged from 9 to 10 years. General English Subjects, including Elementary Arith-

metic; Drawing and Needlework would be a recommendation. The candidate appointed must be a member of the Church of England, holding Higher Froebel and Higher Local Certificate. Salary offered £100 per annum, resident, with pension.—No. 22,347.

ASSISTANT MISTRESS required in January for an important Church High School in the North of England. She must hold Higher Froebel Certificate and be able to offer good Drawing throughout the school, together with ordinary Form subjects. A candidate is looked for who has had at least three to four years' experience. The post is non-resident and salary offered according to the Burnham Scale.—No. 22,366.

Physical Culture Mistresses.

PHYSICAL CULTURE MISTRESS required in January for small high-class Girls' Private School in the London area. She should be able to teach both Physical Drill and Games, and be able to offer Elementary English as subsidiary subject. Salary £85, resident, rising.—No. 22,309.

PHYSICAL CULTURE MISTRESS in January in important Girls' Boarding School on South Coast to teach Gymnastics, Remedials, and Games. Only candidates from the following Colleges will be considered: Chelsea, Bedford, or Dartford. Salary from £120, resident, according to qualifications and experience.—No. 22,282.

PHYSICAL CULTURE MISTRESS in January for Girls' Boarding School in North of England to teach Swedish Gymnastics, Drill, Games, Remedials, Girl Guides, and Swimming. Salary £80, resident, rising.—No. 22,279.

SECOND GAMES MISTRESS for important Girls' Private Recognized School on the South Coast. She should be able to offer some subsidiary subjects. Salary about £80, resident.—No. 22,241.

PHYSICAL CULTURE MISTRESS required for a high-class Girls' Private School in the Midlands. A candidate is looked for who is able to offer subsidiary subjects, and one who is interested in the Girl Guide movement will be welcomed. Salary offered about £100 per annum.—No. 22,354.

Modern Languages and Foreign Mistresses.

FRENCH MISTRESS required in January for a Girls' Boarding School in North of England. Candidate appointed should be able to offer some subsidiary subjects. Salary offered £80, resident, rising.—No. 22,280.

FRENCH NATIVE MISTRESS in January for small high-class Girls' Boarding School in Home Counties. She must have had some experience of English Schools. Salary £40-60, resident, according to qualifications and experience.—No. 22,261.

ASSISTANT MISTRESS in January for large Co-educational School in South of England to teach Senior French together with Needlework. An English Mistress with French acquired abroad is looked for. Post non-resident, and salary according to Burnham Scale.—No. 22,275.

MUSIC MISTRESSES

For important Vacancies
see page 690

Candidates desiring to apply for any of the above or other suitable vacancies should write fully to MESSRS. GABBITAS & THRING, stating their age, qualifications, and experience, and enclosing copies of their Testimonials.

A Prospectus will be forwarded gratis on application. **NO CHARGE FOR REGISTRATION**, and no Fee of any kind is due unless an appointment be obtained through the Agency.

Posts Vacant.

POSTS ABROAD.

LADY TEACHERS are earnestly advised to consult the Continental Secretary of the Girls' Friendly Society, 14 & 16 Holbein Place, Sloane Square, London, S.W.1, before accepting any post abroad. Apply by letter, enclosing stamped addressed envelope. A small charge is made for verification.

SCHOLASTIC, CLERICAL, AND MEDICAL ASSOCIATION, LTD.

THE above Association is in a position to offer to well qualified ladies and gentlemen first-rate Scholastic Appointments in all parts of the country. Candidates should write with full particulars as to age, qualifications, experience, &c., &c., to GENERAL MANAGER, 12 Stratford Place, Oxford Street, W.1. No charge for registration.

HEADSHIPS.

THE HULME GRAMMAR SCHOOL FOR GIRLS, OLDHAM.

(An Endowed, State-aided Day School, on the same Foundation as the Manchester and the Pendleton High Schools and the Bury Grammar School.)

THE GOVERNORS invite applications for the post of Head Mistress of this School. The new Head Mistress will be appointed early in February next, and will take up the work on June 1st next.

Candidates must be Graduates (or the Cambridge equivalent) of a University in the United Kingdom. Initial Salary, £500, rising to £730 by annual increments of £25.

Letters of application, accompanied by copies of four testimonials, are to be sent in so as to be received not later than December 1st.

ERNEST BOOTH,
Clerk to the Governors.

Greaves Street, Oldham.

THE LEWISHAM GRAMMAR SCHOOL FOR GIRLS.

The Governors invite applications for the post of Head Mistress of this School to take up her duties at the beginning of the Summer Term, 1923.

The School is a Recognized Secondary School under the Board of Education and aided by the London County Council. Its present numbers are about 530.

Candidates for the post must hold an Honours Degree or equivalent of a University in the United Kingdom.

Salary £650 per annum rising by annual increments of £40 to £850.

Applications stating age, qualifications, and experience, together with references and four copies of three recent testimonials, to be sent to the CLERK to the GOVERNORS at the School, Rushey Green, Catford, S.E. 6, not later than November 14, 1922.

HHEAD MISTRESS for high-class Boarding School, country, near London. £150, resident.—Address, No. 11,288. *

VICE-PRINCIPAL.

APPPLICATIONS ARE INVITED FOR THE POST OF VICE-PRINCIPAL OF QUEEN MARY'S COLLEGE, LAHORE.

CANDIDATES should be over 25 and under 30 years of age, and should hold an honours degree in English Subjects. Facility in languages is desirable. The commencing salary of the post will not be less than Rs.300 a month; free quarters are provided. The successful candidate will be on probation for the first two years, and as regards leave and pension will be subject to the rules of the Indian Educational Service. Free passage to India will be provided.

Candidates should submit their application in covers marked "C.A.," addressed to the SECRETARY, Board of Education, Whitehall, London, S.W.1. Scottish candidates should apply to the SECRETARY, Scottish Education Department, Whitehall, London, S.W.1.

Posts Vacant—continued.

The Journal of Education & School World

Amongst the special features of the **DECEMBER** issue will be:

An Article on **NEW BOOKS** for **CHRISTMAS PRIZES**.

Classified lists of such books (1) for young children 5 to 11; (2) for boys 12 to 16; (3) for girls 12 to 16.

The twelfth Article of the "Aids" Series: Religious Knowledge, by Canon Box, Professor of Hebrew at the University of London.

It is suggested that Advertisement space should be secured at once.

Mr. WILLIAM RICE, Three Ludgate Broadway, London, E.C. 4.

SUPPLEMENTARY AIDS TO CLASSROOM WORK

now appearing in "The Journal of Education and School World."

INTRODUCTORY ARTICLE.

[January, 1922]

Professor JOHN ADAMS, LL.D., M.A., B.Sc.,
Professor of Education at the
University of London, &c.

CLASSICS.

[February, 1922]

S. E. WINBOLT, M.A., Oxon.,
Christ's Hospital.

HISTORY.

[March 1922]

Professor F. J. C. HEARNshaw, M.A.,
LL.M., LL.D.,
Professor of History at the
University of London, &c.

MODERN LANGUAGES.

[April, 1922]

Professor WALTER RIPMAN, M.A.,
Chief Inspector to the Uni-
versity of London.

GEOGRAPHY.

[May, 1922]

T. ALFORD SMITH, B.A., F.R.G.S.,
St. Dunstan's College, Catford.

ENGLISH.

[June, 1922]

C. E. S. COXHEAD, M.A.,
Head Master, Hinckley Gram-
mar School.

MATHEMATICS.

[July, 1922]

Professor T. PERCY NUNN, M.A., D.Sc.,
Vice-Principal, London Day
Training College (University
of London).

ART.

[August, 1922]

R. D. LAXON, Christ's College, Finchley.

SCIENCE.

[September, 1922]

C. L. BRYANT, Harrow School.

MUSIC.

[October, 1922]

Miss ETHEL HOME,
Head Mistress of Kensington
High School.

NATURE STUDY.

[November, 1922]

E. W. SHANN, B.Sc.,
Oundle.

RELIGIOUS KNOWLEDGE.

[December, 1922]

CANON BOX,
Professor of Hebrew at the
University of London.

OTHER ARTICLES ARE IN PREPARATION.

Professor JOHN ADAMS wrote the Introductory Article to the famous **IDOLA PULPITORUM SERIES** (Nov., 1906—July, 1908) and to the equally noteworthy **IDOLA LINGUARUM SERIES** (Feb., 1914—Jan., 1915), complete sets of which are now unobtainable.

London: Mr. WILLIAM RICE, Three Ludgate Broadway, E.C. 4.

TO ASSISTANT MASTERS ASSISTANT MISTRESSES LADY MATRONS

Truman & Knightley SCHOLASTIC AGENTS LTD

are receiving instructions regarding January Vacancies in Public and Private Schools at home and abroad and will be glad to hear from candidates seeking appointments then.

THERE IS NO CHARGE FOR REGISTRATION OR MEMBERSHIP.

The terms to those securing engagements through this agency are:

On accepting the engagement	10s.
At the end of the first term of such engagement	2½%
on the first year's salary, with an additional fee of £1 if the post be resident.	

Special terms for temporary engagements.

These fees are reckoned on the lowest possible basis consistent with efficient service, and compare very favourably with those charged by any other agency.

SCHOOL TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over Schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

OFFICES:

61 CONDUIT STREET, LONDON, W. 1.

Telegrams: "TUTORESS, PHONE, LONDON."

Telephone: MAYFAIR 1063 (2 lines).

BLACKIE'S SELECT LIST

In these days of economy experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

SCIENCE.

APPLIED CALCULUS. By F. F. P. BISACRE, O.B.E., M.A., B.Sc., A.M.Inst.C.E. Large crown 8vo. xvi + 446 pp., with Answers, including 106 figures, and 17 half-tone portraits of celebrated mathematicians and physicists. Price 10s. 6d. net.

This book has been specially written for science and engineering students who desire to acquire a working knowledge of the calculus but whose preliminary mathematical equipment is slight.

PLANE GEOMETRY. An Account of the more Elementary Properties of the Conic Sections, treated by the Methods of Co-ordinate Geometry, and of Modern Projective Geometry, with Applications to Practical Drawing. By L. B. BENNY, M.A. (Cantab.), B.A. (Lond.), F.R.A.S., sometime Mathematical Scholar of Christ College, Cambridge; Head of the Mathematical Department of University College, Exeter. Large crown 8vo. viii + 336 pp., with Answers, 145 figures, and 5 half-tone portraits of celebrated mathematicians. Price 10s. 6d. net.

This book covers completely the course in Geometry for the B.Sc. Pass Examination of London University in Pure Mathematics.

APPLIED GEOGRAPHY. By ALEXANDER STEVENS, M.A., B.Sc., Lecturer in Geography, Glasgow University. Crown 8vo. Price 6s. net.

For those who propose to enter the professions of the sea, surveying, engineering, prospecting, &c.

METEOROLOGY: An Introductory Treatise. By A. E. M. GEDDES, O.B.E., M.A., D.Sc., Lecturer in Natural Philosophy in the University of Aberdeen. Large demy 8vo. xx + 390 pp., with 4 coloured plates, 16 half-tones, 103 figures, 11 charts, and 29 tables. Price 21s. net.

A SHORT SYSTEM OF QUALITATIVE ANALYSIS. For Students of Inorganic Chemistry. By R. M. CAVEN, D.Sc. (Lond.), F.I.C. Price 2s. 6d. net.

THE FOUNDATIONS OF CHEMICAL THEORY; The Elements of Physical and General Chemistry. By R. M. CAVEN, D.Sc. (Lond.), F.I.C., Professor of Inorganic and Analytical Chemistry in the Royal Technical College, Glasgow. Large demy 8vo. viii + 266 pp., with 46 figures. Price 12s. 6d. net.

"Professor Caven's clear exposition of Modern Chemical Theory, though mainly intended for use as a text-book, will interest laymen who have not followed the developments of chemistry with close attention. Unlike the ordinary treatise, the book seeks to emphasize general principles rather than to record a mass of facts."—*Spectator*.

A TEXT-BOOK OF ORGANIC CHEMISTRY. By A. BERNTHSEN, Ph.D. New Edition, revised to date by J. J. SUDBOROUGH, Ph.D., D.Sc., F.I.C., Professor of Organic Chemistry in the Indian Institute of Science, Bangalore. Large crown 8vo. Price 12s. 6d. net.

SYSTEMATIC INORGANIC CHEMISTRY from the Standpoint of the Periodic Law. A Text-book for Advanced Students. By R. M. CAVEN, D.Sc. (London), F.I.C., Principal of the Technical College, Darlington; and G. D. LANDER, D.Sc. (St. Andrews and London), Professor of Chemistry, Royal Veterinary College, London. Price 7s. 6d. net.

SCIENTIFIC METHOD: Its Philosophy and its Practice. By F. W. WESTAWAY. New Edition. Large Crown 8vo. xxiv + 426 pp., with 24 figures. Demy 8vo. Price 10s. 6d. net.

"Mr. Westaway has a singularly acute and active mind which has engaged itself with almost all branches of human study; and he has the rarest of all gifts among English speaking philosophers, that of directness and lucidity of style."—*Times*.

SOLID GEOMETRY. By J. W. HENSON, B.A., Head Master, High School for Boys, Trowbridge. Cloth. Price 3s. net.

This book provides a course in Solid Geometry suitable for classes taking Higher Geometry in the Oxford and Cambridge Senior Local Examinations and the Intermediate B.Sc. Examinations of London University.

THE JUNIOR SCHOOL SHAKESPEARE

A series of the greater Plays, edited, with Introduction and Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. Price 1s. 3d. each.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater Plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known "Junior School Shakespeare," which omits everything that might be thought undesirable in class reading. Price 6d. each.

THE GROUNDWORK OF BRITISH HISTORY.

New Edition, brought down to 1921.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School Author of "A Brief Survey of British History," &c., and C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College With Maps, Time Charts, and Full Index. 764 pp., super crown 8vo, 8s. net. Complete in One Volume.

In Two Parts, 8s. each net. Part I, B.C. 55-1603; Part II, 1603-1921.

In Three Sections, 3s. 9d. each net: Section I, B.C. 55-1485 A.D.; Section II, 1485-1714; Section III, 1714-1921.

N.B.—FOR THE CONVENIENCE OF THOSE USING EARLIER EDITIONS OF "THE GROUNDWORK," A SUPPLEMENT HAS JUST BEEN ISSUED BRINGING THE BOOK DOWN TO DATE, PRICE 1s. 6d. NET.

THE GROUNDWORK OF THE WAR.

By C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College. 1s. 6d. net.

Prepared specially for a concluding section of "The Groundwork of British History." It brings that work down to 1921.

THE WARWICK SHAKESPEARE.

General Editor—Prof. C. H. HERFORD, Litt.D.,

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well-known edition is the prominence given to the literary and aesthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

THE WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. 2s. 6d. each.

Prospectuses giving full particulars of above publications post free on application.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C. 4.
AND AT GLASGOW AND BOMBAY.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."

The Journal of Education, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness:

"Two years ago you sent me a pupil named ——. Through her parents I have had **four** good pupils this year from four different places, and through two of these have **five** more coming this term: that is, ten pupils from paying **one** commission."

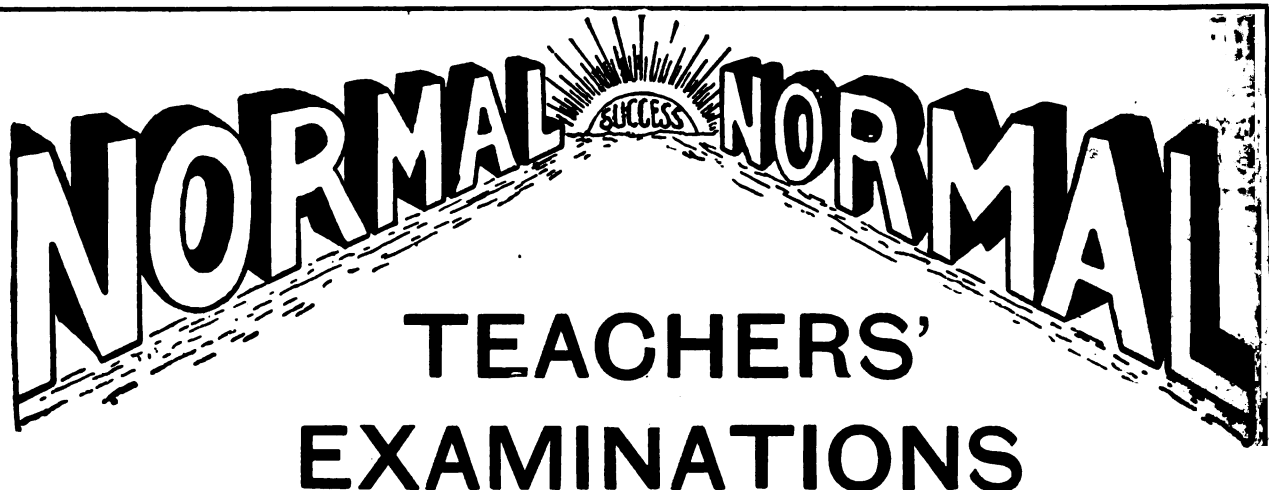

"**Personally, I have found your firm to bring in 90 per cent. of the pupils who come to me through Scholastic Agents.**"

"**Hearty thanks for your continued recommendations, which bear such excellent fruit in the number of boys that I get through you. I find that out of my 32 boarders 16, or exactly one half, have been sent here by you.**"

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

J. & J. PATON, EDUCATIONAL AGENTS,
143 CANNON STREET, LONDON, E.C. 4.

Telephone: Central 5053.

NORMAL

TEACHERS' EXAMINATIONS

THE NORMAL CORRESPONDENCE COLLEGE was founded by its present principal in 1889. It was immediately apparent that effective tuition by post was not only possible but that it supplied a definite, positive and urgent educational need.

Thousands of Students, Student Teachers, and experienced teachers have been enabled by THE NORMAL to obtain higher qualifications, good appointments, and promotion. Since 1907 more than 5,000 Distinctions and Honours have been won at Public Examinations by NORMAL pupils, and what the NORMAL has done for others it can do for YOU

Preparation is given for *Preliminary Certificate, Certificate, L.L.A., A.C.P., L.C.P., Froebel, Matriculation, Oxford and Cambridge Locals, Degree Examinations*, etc., as well as for *Single Subjects*.

Correspondence training for qualifications neither demands attention at College for long set hours, nor does it interfere with the pupils' work or residence. It is within the reach of all—even of those in the most far-away villages—enabling them to qualify for better appointments. The training of the NORMAL CORRESPONDENCE COLLEGE given by expert staff tutors is so clear, systematic and thorough that success is assured to the diligent student.

The call of the future is for better qualified teachers. Prepare now to improve your position by becoming a student of the NORMAL. Write to-day for "THE NORMAL GUIDE TO SUCCESS" (80 pages), which will be sent free to readers of this paper.

This is the age of the specialist. If you want an Oral Class, then join an Oral Class. If Civil Service is your aim, then join a class that specialises for Civil Service examinations. If you seek a Correspondence Class that specializes for YOUR examination, then join the NORMAL.

NORMAL CORRESPONDENCE COLLEGE,

MELFORD ROAD, EAST DULWICH, LONDON, S.E.

BLACK'S REFORM FRENCH COURSE

Edited by
F. B. KIRKMAN, B.A. Oxon.

PETIT COURS PRÉPARATOIRE.

By R. B. MORGAN, B.Litt. Forty-four Songs, of which fifteen are in Phonetic Script. Airs and Tonic Sol-fa. Third Edition. Price 1s. 4d.

COLOURED WALL PICTURE.

LA FAMILLE PASCAL À TABLE.

To accompany La Première Année de Français. Measurement: 45 by 35 in. Price, on linen, with rollers, varnished, 15s. net; unmounted, 5s. net.

An entirely new edition of La Deuxième Année.

LA DEUXIÈME ANNÉE DE FRANÇAIS

By F. B. KIRKMAN, B.A. and E. A. CRADDOCK, M.A. Fourth Edition, reset and largely rewritten. Containing many illustrations. 194 pages. Price 3s. 6d.

Chief features: (1) Each prose CHAPTER illustrates one grammatical rule, the examples being in thick type. The verse chapters are not used for grammatical purposes. (2) Each EXERCISE contains (a) questions in French on the vocabulary of the corresponding chapter; (b) similar questions on the grammar; (c) matter for composition, oral and written; (d) revision in a new setting of the grammar taught in the previous lesson but one; (e) short independent revisions of selected grammatical points from the first year course; (f) preparation for the following exercise. (3) GENERAL REVISIONS of groups of exercises are given at intervals. (4) GRAMMAR TABLES. The verb tables are placed at the end of the book. (5) ILLUSTRATED FRENCH—FRENCH WORD-LIST. Every explanation given has been successfully used in the classroom. (6) Over twenty POEMS and DIALOGUES for recitation.

Published by A. & C. BLACK, Ltd.,

4, 5, and 6 Soho Square, London, W. 1.

REVIEWS AND MINOR NOTICES.

THE PHILOSOPHY OF LIFE.

Harmonism and Conscious Evolution. By Sir CHARLES WALSTON (WALDSTEIN). (21s. net. Murray.)

In this handsome volume Sir Charles Walston gathers up his philosophy of life. In his voluminous writings he has already set forth a good deal of what appears here in its final form. Indeed there is incorporated in the text a considerable amount of material taken without change from previous publications. But the reader need not complain, as all this matter is well expressed and deftly fitted into the context, the result being a self-contained book which is a much more satisfactory thing than a work that depends for its complete understanding on continual references to a number of other volumes by the same author. To be sure, there is no lack of such references in the present text, but the work as a whole can be understood without such extraneous aid.

The general principle laid down is that the aesthetic side must be allowed a much higher place in our general philosophy: that so far from being a side issue it is fundamental. We are not to limit ourselves to "works of Art" when we speak of aesthetics; we are to consider the whole of our activities, including the art of living itself, from the aesthetic standpoint. Hegelians and some other idealists will feel themselves quite at home in Sir Charles's pages, for they, too, have appreciated the value of the concept of harmony. Even educators are not unfamiliar with the notion of "the harmonious development of all the faculties." The fact that there has been such vigorous controversy about the meaning of the phrase will give added zest to the teacher who sits down to this book. Education, in fact, comes in for a good deal of attention. Sir Charles depends upon the teacher taking a prominent share in the development of the consciousness that is to mark in an increasing degree the evolution of the future. Our modest head masters will be rather appalled at the demand that they should "every year give one or more lectures to the assembled staff, representing every department of instruction, however remote from pure science, epitomizing the results of new discoveries in science and art, not only of mechanical and experimental sciences, but also including humanistic studies, history, criticism, philosophy, and the works of art and literature." Sir Charles does not lack appreciation of our duties. Most of us, however, will be better pleased with his final chapter, that takes the form of an educational epilogue. It is only natural that in a work definitely committed to the doctrine of conscious evolution, the taking of ourselves in hand as races and as individuals, education should hold a prominent place, and throughout the volume we find this recognized.

Though the book is full of debatable matter, its general tendency is eminently peaceable. Violent opposition will be raised to Sir Charles's views on the Labour Party, on the League of Nations, on an international police, on the share that children should have in guiding their own studies. But every reader will admit that the views here set forth are fairly stated, that great help is given toward forming conclusions for ourselves, and that even when we cannot agree with the author we would like to—so persuasive is he.

SPIRITUAL SCIENCE.

Fruits of Anthroposophy: An Introduction to the Work of Dr. Rudolf Steiner. Compiled and edited by G. KAUFMANN. (The Threefold Commonwealth. 2s. 6d. net.)

We have come to the conclusion that the worst thing about anthroposophy is its name. Etymologically the word is, of course, more than respectable, and its begetter makes a good case for it, especially when he differentiates his use of it from his use of the term anthropology. But it will remain hard for a convert to anthroposophy to escape

the suspicion of being a crank. Yet a consideration of the governing principle that animates the teaching of Dr. Rudolf Steiner will, we think, be enough to give pause to any one who is tempted to reject a book because of its forbidding title.

We venture to introduce that principle by offering an illustration. It is not too much to say that the progress of scientific and historical research has left not a stick standing of those naïve beliefs about the Bible which satisfied our grandfathers and even our fathers. But we are beginning to see that it will never do to leave this matter where it was left by Huxley and his school. Our present task is to re-interpret and reinstate the Bible, by using those very scientific methods with which the demolition of the older views was accomplished. That is precisely what modern biblical scholarship has tried to do, and the sooner its findings have become part of the common stock of knowledge, the better for the Bible and for its restored influence upon the life of the nation. We cannot maintain a duality which applies scientific methods to the study of nature and of "secular" history, and denies the applicability of those methods to the contents of the Bible. Faith itself can never flourish in such a mental soil.

Generalizing from our illustration, we come at once to what we take to be the root principle of anthroposophy. Man has "so far developed the scientific tendency in thought, that he can no longer admit any values to his life, except such as hold good in the light of scientific criticism. Hence his striving to find scientific foundations for religion, for art, for morals, and for social ethics. Hence, too, the gradual weakening of religion, the increasing uncertainty of art, the growing decay of social structure. All attempts to restore religion to its former strength must fail, unless religion can be drawn into the sphere of certain scientific knowledge." True, our forefathers experienced in simple faith the heights and depths of spiritual life. But it is useless for us to try to conjure up *their* mystic experience of faith. We must take the path that our own problems and our own stage in evolution demand. Starting from natural science, we must proceed to "spiritual science"; or, to lapse into long words, starting from "anthropology" we must proceed to "anthroposophy." Dr. Steiner propounds at least a reasonable proposition when he asks us to accompany him along the path thus marked out.

Or, rather, we should say, along the paths, for there are many methods of approach, and Mr. Kaufmann here does good service as a guide. He gives a very clear introductory exposition, and adds a chapter on "the threefold social order," a conception of Dr. Steiner's which has attracted much attention. Other contributors have dealt with the Waldorf school, in which knowledge of the child, as understood by Dr. Steiner, bears its fruits in the practice of education; with the medical course at the Goetheanum, Dornoch; and with "the new impulse in Art," including the new art of eurhythm, which is not to be confounded with eurhythmics.

How thoroughly Mr. Kaufmann has performed his duty as guide is exemplified by his selected bibliography, containing no fewer than three hundred and nine entries, the works of which English translations exist being clearly distinguished. The reader who desires acquaintance, or further acquaintance, with anthroposophy, could, we imagine, do no better than accept Mr. Kaufmann's assistance.

ORIENTIC LEARNING.

The Cambridge History of India. Volume 1, Ancient India.
Edited by Prof. E. J. RAPSON. (42s. net. Cambridge University Press.)

The twenty-six chapters of this remarkable volume present to English readers a marvellous mass of information almost wholly new, and derived in the main from sources entirely closed and sealed to those whose education is limited to the languages usually studied in the Western World. It used to be said until very lately that authentic

knowledge respecting India did not extend back beyond the eleventh century of the Christian era. The writers of the volume before us add a thousand years to this period, and carry their well-documented story back to a very remote antiquity. Prof. Rapson, the general editor, in the second chapter of the book, enumerates and describes the principal sources which have enabled this astonishing extension of historic information to be achieved. They include archaeological remains, inscribed monuments and coins, ancient literatures, and references in foreign writers which only lately have been collected and interpreted.

Sir Halford Macindoe opens the book with a masterly survey of the geographical conditions of the sub-continent of India. Prof. Rapson follows with a description of the peoples of the peninsula. Then Dr. Giles, of Emmanuel College, treats with learning and penetration the problem of the origin and migrations of the Aryan peoples. To these preliminary sketches succeed the more restricted and technical studies, e.g. Prof. A. B. Keith, on the Rigveda and the Upanishads; Dr. Charpentier, on the Jains; Prof. Davids, on the early Buddhists; Prof. Hopkins, on the Sutras; Prof. Rapson, on the Purnas. More familiar ground is reached when Mr. E. R. Bevan treats of Alexander the Great in relation to India, and when Dr. F. W. Thomas, Dr. L. D. Barnett, and others, carry the story down to the first century of the Christian era.

It is highly gratifying that to British scholars, for the most part, is due the credit for the production of this massive monument of Oriental learning.

ELECTRODYNAMICS AND RELATIVITY.

An Introduction to Electrodynamics: From the Standpoint of the Electron Theory. By Prof. L. PAGE. (10s. net. Ginn.)

Many students will welcome the volume by Prof. Leigh Page in which is presented a logical development of electromagnetic theory founded upon the principle of relativity. Instead of basing the electrodynamic equations on the experimental conclusions of Coulomb, Ampère, and Faraday, the author considers it more logical to derive them from one general principle. He seeks to give a logical rather than an historical account of the science. As the analysis is much simplified by the use of the vector notation of Gibbs a short introduction is provided containing those elements of vector analysis which are made use of farther on in the text. In the first chapter is given a short statement of the principle of general relativity leading up to the following restricted form of the principle:

"A law governing physical phenomena which are conditioned solely by those effects which travel through empty space (such as a light wave or one of the moving elements which form an electromagnetic or a gravitational field) has the same form and its constants have the same values for two mutually reciprocal systems."

Here the term reciprocal systems is applied to reference systems which have the same geometry, devices of the same character for measuring time and distance, and interchangeable units of these quantities. The differential transformations between two such systems are then derived and from them the four relations known as the Lorentz-Einstein transformations are deduced. In the next chapter these relations are applied in finding the retarded equations of the field of a moving point charge, and in Chapter III the simultaneous field of a moving charge is discussed in some detail. In the electrical theory of matter, all matter is assumed to be made up of positive and negative electrons. For the present purpose an electron may be defined as an invariable charge, of definite magnitude, distributed over a surface which is spherical in form to an observer in that system in which the electron happens to be momentarily at rest. The dynamical equation of such an electron is obtained in Chapter IV. The general field equations are next discussed and the case of electromagnetic waves in space is considered in detail. It is

pointed out that many of the results may be expressed in far more compact form in terms of four-dimensional vector analysis than in the analysis of three dimensions. The remaining chapters are concerned with radiation of energy from electrons and applications of the electromagnetic equations to material media. The author appears to have done his work well and to have realized the difficulties encountered by the student, as for instance in the reduction of the equations to engineering form. A word of praise must be given to the mathematical printing, which is exceptionally good.

CLASSICS.

Hellenic History. By G. W. BOTSFORD.
(18s. net. Macmillan.)

Those who know Dr. Botsford's "History of the Ancient World" will not need to be told that in this, his last work, he makes full use of the visual appeal of artistic and archaeological objects, but perhaps it should be said that the very numerous illustrations, maps, and plans in this volume have been excellently chosen and beautifully reproduced. Not that the chief virtue of the book resides in these. The ground covered extends from the Minoan age to 30 B.C., and we are given not only an account of objective events but a remarkably sane and judicious appraisal of the economic, social, and literary conditions of each successive age. In the preface we read, "In short this book represents an effort to combine political, economic, social, and cultural history in one synthesis," and the result is a monument of scholarship of which any one might be proud. Yet it is always lucid and easy reading, though entirely free from the crudity which one is apt to associate with American scholarship. Throughout the work there are illustrative quotations—it is a pity they are in translations and not in the original—from the chief authors of the period, and the versatility of the author's scholarship is well shown in the enlightened criticisms which he gives of all sides of Greek art and life, whether it be sculpture, literature, or philosophy. Limitations of space forbid us to do justice to the manner in which throughout such a lengthy survey of history and culture he never seems to accept the conventional view upon authority, as such, but preserves an individual judgment which is almost always well acquainted with the latest researches even of specialists in their different subjects. The examination of the social and economic factors in the life of different periods well illustrates this, but it is most remarkable in the criticism of Euripides, that slanderer of womankind (as the conventional view will have it). But not so Dr. Botsford: "The poet of the submerged majority of human kind found it no small part of his task to express the yearnings of Athenian women for a larger life and in a measure to create a sentiment in favour of their amelioration" (p. 332), and the recognition that Euripides helped by his plays to lift religion to a higher plane is the outcome of the work of quite recent scholars. This is, of course, a detail in Dr. Botsford's book, but we mention it as typical of the sound criticism which the reader will find throughout this admirable history.

DRAMA.

Elizabethan Drama. By Dr. J. SPENS. (5s. net. Methuen.)

Rather a series of stimulating and suggestive lectures than a complete conspectus of the subject. Miss Spens is not afraid of challenging the accepted commonplaces of criticism, e.g. she doubts whether Shakespeare uses comic scenes to give "relief" in his tragedies, arguing that there is no real relief in the gravedigger scene for anybody who understands its significance. But is not this to consider too curiously? The triumph of Shakespeare's art is surely that the groundlings are conciliated, while the thoughtful spectator shares for a moment in the relief, only to discover that he has been given food for further reflection. The argument of the epilogue is interesting. Miss Spens holds that the Elizabethan drama was not killed by the Puritans closing the theatres, but by the drama having come to be "written more and more for a narrow intellectual or aristocratic circle."

EDUCATION.

Society and Solitude. By Prof. E. T. CAMPAGNAC.
(8s. 6d. net. Cambridge University Press.)

It is one proof of the enormous scope of the subject, that our professors of education are persons of such exceedingly varied outlook and attainments. One devotes himself to psychology, another to statistical and experimental work, another to the history of education, another to administration,

and so on. So far as we are aware, Prof. Campagnac stands alone, at any rate in this country. He writes as the poet, prophet, and seer of education. But he who runs may not read Prof. Campagnac. The reader must take trouble, and then he will get his reward. If on first glancing through the book he should entertain doubts, let him look carefully at what the author has to say about play (chapters IV and IX), specialization (chapter VII), and class-distinctions (chapter XI), and we think he will speedily have his doubts removed. It is indeed refreshing in these times to be reminded, with so rare a combination of force and grace, that a study of education which lacks a philosophy lacks the one thing needful.

(1) *Education on the Dalton Plan.* By HELEN PARKHURST.
(5s. net. Bell.)

(2) *Dalton Plan Assignments. I.—English, Geography, History.*
Compiled by the Staff of the Streatham County Secondary School for Girls. With an Introduction by R. BASSETT.
(2s. net. Bell.)

The first of these two books contains an exposition of the "Dalton Plan" by its originator, Miss Helen Parkhurst, and accounts, written by Miss R. Bassett and Mr. J. Eades, of the working of the plan in an English secondary and elementary school respectively. We think that in Miss Parkhurst's part of the book, the introductory matter is somewhat over-elaborated, and that most people who consult the book will hasten on to the descriptions of work actually done. They will find both books useful for getting an idea of the experiments that are being tried in this mode of organization. To say this, however, is by no means to express general approval of the matter contained in the "assignments." Some of it is, in our opinion, distinctly poor.

ENGLISH.

Letters to my Grandson on the Glory of English Prose. By the Hon. STEPHEN COLERIDGE. (4s. net. Mills & Boon.)

Mr. Coleridge's choice of extracts is beyond all cavil. Whether the connecting letters, with their frequent touches of the writer's idiosyncrasies, will please or merely irritate is a question that will receive opposite answers from different temperaments.

What Maisie Knew. In the Cage. The Pupil. By HENRY JAMES.
(7s. 6d. net. Macmillan.) *The Aspern Papers. The Turn of the Screw. The Liar. The Two Faces.* By HENRY JAMES.
(7s. 6d. net. Macmillan.)

Two volumes of the delightful new pocket edition. For the student of literary art the value is enhanced by the author's critical prefaces here reproduced from the "New York" edition.

Language: An Introduction to the Study of Speech. By E. SAPIR.
(8s. 6d. net. Milford: Oxford University Press.)

A lucid and interesting study of the problems of language—the origin and nature of speech, grammatical processes, types of linguistic structure, the influence of languages upon each other, the relations of language, race, and culture, the relations of language to literature, and so forth. The writer has a broad grasp of principles, avoids unnecessary technicalities, and takes his illustrations as far as possible from English.

The Divine Comedy of Dante Alighieri.

Translated by C. E. NORTON. (16s. Constable.)

Messrs. Constable & Company have now published for the first time in England this American translation of "The Divine Comedy." Originally published in three parts ("Hell," "Purgatory," and "Paradise"), the revised edition of the complete work has now been put into a single volume of just over 800 pages. It is well printed on good paper and strongly bound, and could appropriately find a place in the school library.

The New Beacon Readers.—Teachers' Manual. By J. H. FASSETT. (1s. 6d. net. Ginn.)

This is yet another attempt to make the process of learning to read English quick and easy for the beginner; it has many novel points to recommend it, and it is soundly scientific. Based on the ascertained fact that 86 per cent of the vocabulary of children in their first school years is phonetic, only 14 per cent of the words they use being unphonetic, most of the learner's attention is at first centred on drill in "phonics," the exercises being graded strictly in accordance with a carefully-arranged scheme. It is wisely insisted that the child shall not have his attention diverted to the physical details of sound production, this being a matter for the phonetician or the teacher, and no attempt is to be made to teach an unphonetic word by means of "phonics." The principles underlying the method are so clearly set forth in the first sixteen pages that it would be well worth the while of every teacher of reading to procure and examine this small manual.

GEOGRAPHY.

Frequented Ways : A General Survey of the Land Forms, Climates, and Vegetation of Western Europe, Considered in their Relation to the Life of Man ; Including a Detailed Study of Some Typical Regions. By Dr. M. I. NEWBIGIN. (15s. net. Constable.)

Although the author states that this book is not intended for the geographer in the technical sense, it is nevertheless the kind of book that every teacher of geography should read. Dr. Newbigin is a keen observer and thinker, and she expresses in literary style the extensive knowledge which she has gained from her travels in Italy, France, and Switzerland. After an introductory section on the structure of Western Europe, there follows a detailed account of the main railway routes from London to Italy in relation to the Vosges, Jura, Alps, and other physical barriers. Natural vegetation and cultivated crops are dealt with at considerable length, and most instructive contrasts are drawn between the conditions of growth in the Mediterranean region and those in the British Isles. In the second half of the book, typical regions are chosen for special treatment, such as the Alpine region, the hills and valleys in the Dolomites, Naples and Vesuvius, the Scottish Highlands, and the North Italian plain.

Visual Geography.—Children of the World. By A. NIGHTINGALE. (1s. Blackie.)

This book presents a pictorial method of teaching introductory geography, and the method will undoubtedly be welcomed by both teachers and pupils. There are full-page outline sketches of children of twenty-one different countries. In each case the sketch clearly indicates some typical feature of the people or of the country. Opposite each picture is printed an interesting account of the children represented in the sketch and suggestions are given for colouring the pictures.

Edinburgh. Described by J. GEDDIE. Painted by E. W. HASLEHUST. (3s. net. Blackie.)

Loch Lomond, Loch Katrine, and The Trossachs. Described by G. EYRE-TODD. Painted by E. W. HASLEHUST. (3s. net. Blackie.)

These books are clearly printed and beautifully illustrated ; they do not belong to the guide-book type, but deal especially with the interesting historical associations of the places described. Each book has twelve full-page illustrations in colours reproduced from paintings, and it is to these artistic illustrations that the books owe their chief attractiveness. For books so well produced the price is remarkably low.

HISTORY.

The Growth of Rome. By P. E. MATHESON. (2s. 6d. net. Milford : Oxford University Press.)

Mr. Matheson has achieved one of those miracles of condensation which only consummate masters of their subject can attempt to perform. In four chapters, comprising in all about eighty pages of print, he has succeeded in presenting a sketch of the whole of Roman History from the earliest times to the second century of the Christian era. Of course, only the broadest and boldest outlines are given ; but it is an immense advantage to the student, before he plunges into detail, to have the outstanding features of his subject placed before him in such masterly perspective.

Helps for Students of History.—No. 47. A Student's Guide to the Manuscripts Relating to English History in the Seventeenth Century in the Bodleian Library. By G. DAVIES. 1s. No. 48. *History and Ethnology.* By Dr. W. H. R. RIVERS. No. 49. *Some Aspects of Boundary Settlement at the Peace Conference.* By A. G. OGILVIE. 6d. each. (S.P.C.K.)

We welcome the resumption of the S.P.C.K.'s useful series of *Helps for Students of History*. The three pamphlets before us serve three very different types of scholars. The first is a valuable guide to specialists in the period of the Commonwealth ; the second appeals to those whose researches lie in the regions of historical origins ; the third treats of the historical-geography which helped to determine the peace settlement of 1919. All are by first-class authorities.

MODERN LANGUAGES.

Maria Chapdelaine. By L. HÉMON. A Translation by W. H. BLAKE. (6s. net. Macmillan.)

The reflection that this story has been as popular in France as "If Winter Comes" in England is hardly flattering to the national pride of an Englishman. For the rare beauty of the French Canadian tale is in strong contrast to the commonplaces of its English rival. The long, cruel winters, the swiftly-coming, swiftly-closing hot summers, the simple life of the French

settlers, their pieties and superstitions, are movingly portrayed, and the author had learnt the artistic secret of Sophocles, that the finest effects are won by reserve. This book should be in every school library.

Berenice (A Tragedy). Translated from the French of JEAN RACINE by JOHN MASEFIELD. (2s. 6d. net, paper ; 3s. 6d. net, paper boards. Heinemann.)

It is interesting that Mr. Masefield should be attracted by Racine, a poet with whom he would be thought *a priori* to have little affinity. But a fine catholicity, an appreciation of the best in each kind, is characteristic of the true man of letters. In the severely simple translation of "Berenice" the scenes and characters stand out with the definiteness of a firm line engraving. This play, like "Esther," should be useful for school dramatic readings.

MATHEMATICS.

Dexterito-Teaching Appliances. Multiplication Test Board 10 by 10 holes. (1s. 4d. net.) *Box of 100 numbered pegs.* (8d.) By Dr. J. WHITE. (Auto-Education Offices.)

The Multiplication Test Board, of which a sample has been sent to us, appears to be designed to give children practice in multiplying numbers up to 10 by 10, and in factorizing multiplication products according to a plan which is in the end self-corrective. The Test Board thus fulfils its object of providing the individual child with plenty of occupation, of such a kind that errors are exposed automatically, and do not need to be pointed out by the teacher. Several other appliances are issued by the Auto-Education Institute, and still others are in preparation. They are recommended to the notice of teachers, whether or not the freedom of the "Dalton Plan" prevails in the school, though they are obviously of special value where a good deal of individual freedom is allowed.

Elements of Practical Geometry. By P. W. SCOTT. (5s. net. Pitman.)

This is a two-years' course for day and evening technical students. Each chapter contains first of all the relevant fundamental or formal exercises in plane geometry and these are followed by problems. The chapter on plan and elevation and another on developments of simple solids serve as an introduction to more advanced work. The diagrams are clear, the explanations concise, and the arrangement good.

New Mathematical Pastimes. By Major P. A. MACMAHON. (12s. net. Cambridge University Press.)

Major MacMahon has been cultivating privately an entirely new species of mathematical pastimes, and he now publishes an account of them for the delectation of a wider circle. His description of the game in Part I of the book is generalized dominoes. Triangles, squares, hexagons, are divided into compartments differently coloured and the player has to assemble them in different ways subject to certain arbitrarily specified rules. The pastimes described in Part II are a transformation of those in Part I. Here the pieces have the same colour but different shapes. Part III is a natural sequel to the preceding parts ; it deals with the design of repeating patterns for various kinds of decoration. The subject is capable of infinite development, and is clearly one which combines in an unusual degree scientific, aesthetic, and practical interests.

Problems Made Easy for Preparatory Schools and the Lower Forms in Public Schools. By R. TOOTELL. (3s. net. Warren & Son, Winchester.)

This little book is intended to help beginners to surmount the difficulties they experience in translating the statement of problems into algebraic symbolism. This difficulty is very real and great, and the assistance the author gives is likely to be of considerable use in overcoming it.

MISCELLANEOUS.

Robin Hood and his Merry Outlaws. Retold from the Old Ballads by J. W. McSPADDEN and C. WILSON. (12s. 6d. net. Harrap.)

The adventures of Robin Hood are here retold from ancient ballads in a continuous prose narrative. Each incident is headed by verses from the ballad on which it is founded ; the language throughout is simple and in keeping with the old rhymes. The value of the work is enhanced by good coloured illustrations, and by a short introduction which contains a partial justification of the outlaw of those turbulent and lawless times, when king, nobles, and bishops were all engaged in persistent struggles with each other, while all combined to oppress the common people, to whom the law gave no redress.

The Amazing Schoolmaster. By R. W. CAMPBELL.
(6s. net. Palmer.)

This is a curiously naive account, in novel form, of the exploits of a young head master of the "practical idealist" type. The book illustrates the merits of its hero and the limitations of its author. A man like Jack Rivers, M.A., D.S.O., M.C., doubtless can effect remarkable changes in his pupils and their parents, reform his staff, educate H.M. Inspectors, and win, for his merits, an Honorary Degree; but so rare a creature deserves better than to have the tale of his deeds overlaid with long, commonplace disquisitions on poetry and morality; he does not deserve to have to express in pretentious, violent phraseology his author's simple views on current topics, or to consort with people who suppose that Moore (*sic*) wrote "Utopia" and that a well-known girls' school is named "Rodeen." A study, in half the space and in chastened language, might have commended this type of man to readers who will now be bored to read of him.

Somerville College 1879-1921. By M. ST. CLARE BYRNE and C. H. MANSFIELD. (6s. net. Milford: Oxford University Press.)

This brief sketch, though it makes no claim to be an official history, or to be comparable with Miss Alice Gardner's important "History of Newnham," will yet be welcomed, not only by old Somervillians, but also by a wider circle of readers interested in the development of women's higher education. Its appearance is timely, having regard to the well-known needs of the women's colleges, and the honourable part which Oxford has played in according university rights and privileges to women. The story of a growth from a few private students and a pony chaise to a recognized college in a great university is very well told, and the interest of the narrative is enhanced by several good illustrations.

PHILOSOPHY.

Greek Philosophy from Thales to Aristotle. By R. B. APPLETON. (6s. net. Methuen.)

The great merit of this book is that it begins at the beginning. So many writers on such subjects assume just that sort of preliminary knowledge that beginners do not possess. Since the matter appears to be based upon work done with the sixth form at the Perse School, it is not so surprising that the text is intelligible, and it says much for that school that its pupils can face a course in real philosophy. It is true, on the other hand, that a knowledge of Greek is assumed. Certainly a Greekless reader can follow the main argument without much difficulty, but the full value is not available for those who have no knowledge of the language. The Greek background is remarkably well supplied, and the general effect of the book is excellent. It would be difficult to find a better general introduction to a philosophical course. It can be strongly recommended.

PSYCHOLOGY.

Group Tests of Intelligence. By DR. P. B. BALLARD. (6s. net. Hodder & Stoughton.)

In a former publication Dr. Ballard described certain methods of testing intelligence individually, and certain methods of testing attainments collectively. In the present volume he goes on to deal with the testing of intelligence collectively, a process which, he says, needs care, but does not need a special psychological training. He also extends his former treatment of statistical method, so as to include an account of correlation and probable error. Recent discussions in the daily newspapers of the intelligence tests applied to candidates for the civil service have no doubt caused many people, and especially teachers, to desire a popularly written manual, setting forth the nature of the tests, the claims made for them, and the grounds upon which those claims are based. To such persons we strongly recommend Dr. Ballard's book, which, like most things he writes, teems on every page with interest and suggestion. It will of course be understood that in making this recommendation we do not commit ourselves one way or the other as to the merits of the case which the author attempts to establish. A discussion of his case would not be possible within the limits of a short notice. Meantime, we venture to say that no better introduction to the subject could be found than that which Dr. Ballard supplies.

POETRY.

The Ballads of Marko Kraljevic. Translated by D. H. LOW. (15s. 6d. net. Cambridge University Press.)

A beautifully produced edition of the traditional poems about the great Serbian hero in an English version. "There is no key to the soul of Serbia," says Mr. Low, "like a wise and sympathetic study of the ballads of Marko Kraljevic." The translation is unaffected and pleasing.

RELIGIOUS KNOWLEDGE.

The First Twelve Chapters of the Book of Isaiah: A New Translation from the Hebrew. By H. W. SHEPPARD. (1s. 6d. net. Bowes & Bowes.)

Mr. Sheppard's volume contains a translation, with nothing in the nature of notes or introduction, of the first twelve chapters of Isaiah. The translation, though preserving the character of the familiar English version, is, to some extent independent, and ought to be useful to a class reading the Hebrew text.

The Modern Reader's Bible for Schools. The Old Testament. By Prof. G. MOULTON. (12s. net. Macmillan.)

Dr. Moulton's indefatigable efforts to promote the wider study of the English Bible as literature are well known. The present volume is the worthy successor of earlier work in this field, and has been preceded by one setting forth the New Testament literature, arranged on the same plan. The Editor explains that "The Modern Reader's Bible" is not a new translation, but is the ordinary Bible (Revised Version) so printed as to bring out to the eye the literary form and structure of each portion of Scripture, such structural presentation being essential, as in other books, for following the meaning of what is read. The material is arranged in a series of chapters, of which chapter I (pages 9-138) contains material illustrating the history from the call of Abraham to the establishment of the monarchy; then the monarchy with the preaching of the great prophets, down to the Captivity and Return; chapter II (pages 139-174) deals with the transition from history to collected literature; chapter III (pages 175-267) illustrates the prophetic literature; chapter IV (pages 269-365) that of psalms and lyrics; chapter V (pages 367-385) the poetry of Deutero Isaiah; chapter VI (pages 388-462) the wisdom literature. Each section is furnished with a short introduction, and there is a body of useful notes at the end of the volume. The actual text of the passages is so arranged as to bring out the poetical structure (in the poetical passages), and is divided up among different speakers (where this is supposed to be appropriate) and furnished with proper divisions and headings. It forms a well-finished and ample volume. We only wish it could be issued at a much lower price, and used on a large scale in schools.

SCIENCE.

Organic Analysis, Qualitative and Quantitative. By E. DE BARRY BARNETT and P. C. L. THORNE. (7s. 6d. net. University of London Press.)

This very excellent little handbook of laboratory organic chemistry should prove very useful to the University student. It differs materially from the usual "spotting" text-book, which is provided with tables of a more or less mechanical type and which is really a lineal descendant of the old test-tube procedure of our inorganic youth. The authors rightly observe that no scheme will enable the student to identify any organic compound and they correctly insist on the recognition of groups rather than compounds. They lay stress on the quantitative side of organic practical work and provide an unusually full set of exercises thereon. Perhaps the most useful feature of this work is the appendix, which describes the Richter system of indexing.

Experimental Organic Chemistry.

By A. P. WEST. (10s. 6d. net. Harrap.)

The author, who is professor of chemistry in the University of the Philippines, has written a preparation book in which the minimum of theoretical matter is interpolated. Whilst it is probably sound that the lecturer should supply *vis à vis* the necessary theoretical matter and that the student should compile his own laboratory note-book, yet under the present admittedly imperfect system the average pupil needs both theoretical and practical manuals. Unfortunately Dr. West has added one volume more to an already enormously inflated collection of books of the same kind.

Laboratory Exercises in Applied Chemistry for Students in Technical Schools and Universities. By Dr. W. MOLDEHAUER. Authorized Translation by Dr. L. BRADSHAW. (12s. 6d. Constable.)

It is only very rarely that a book can honestly be described as filling a long felt want, but this somewhat hackneyed description is very apt in the case of Dr. Moldenhauer's manual. It is scarcely surprising that when the academically minded text-book writer discusses technical operations he invariably describes procedure second-hand, and so it is that the same irritating errors are propagated from generation to generation. The author of the work before us is a *privatdozent* at the

Darmstadt Technical School and speaks with knowledge and authority on a subject which has scarcely been touched upon before, *i.e.* the practical training of students actually engaged in chemical industry or shortly to be venturing therein, and who require to know just why and wherefore certain procedures are followed. The book has a metallurgical bias, but most of the heavy chemical industries are discussed. The translation has been excellently carried out, and the printing leaves nothing to be desired.

An Introduction to Organic Chemistry.

By D. LL. HAMMICK. (6s. Bell).

Mr. Hammick has written a little book designed "to introduce the beginner to the idea of structure and . . . the elementary notation and technique of organic chemistry." He has probably succeeded as well as the vast number of his predecessors have done, for there is nothing new in his presentment and much that is inaccurate. On page 9 he directs the student to use not more than 2 grams of an organic compound for a combustion, on page 12 he used caustic soda in place of caustic potash in a nitrometer, on page 13 he gives no caution as to opening a Carius tube, and on pages 117-118 he falls into the errors which most text-book writers make under the heading of petroleum. We have on many occasions directed attention to this particular point and once more would emphasise: (1) Petroleum is *not* practically entirely composed of paraffins. (2) Crude oil is *not* necessarily a thick liquid of dark colour. (3) The distillate between 50°-60° C. is *not* petrol. (4) The distillate 60°-90° is *not* benzine. When the above and similar mis-statements are corrected the volume will probably be a useful guide to the beginner.

TOPICS AND EVENTS.

A FRENCH WEEKLY FOR JUNIORS.—The immediate success of the French weekly newspaper for schools, *La France*, was not surprising. It was the just reward of the editor's ability and the enterprise of the publishers, Messrs. Evans Brothers. While continuing the issue of this journal they have undertaken what is, in some respects, a more difficult task, that of providing a similar journal for younger readers. The new venture is entitled *L'Echo de France*. It is published at the same price (1d.). The page is a little smaller. There are to be forty numbers a year. We have before us the first three issues, and are most favourably impressed by them. It is particularly in the third year of instruction, after a good foundation has been laid, that it is desirable to extend the vocabulary and encourage private reading; and this journal will serve both purposes very well indeed. The reading matter is varied and interesting; anecdotes, dramatic scenes, aspects of French life, short stories, simple instructions for making things, these will all invite the young reader. Moreover, there are plenty of illustrations, both amusing and instructive. Skilfully disguised, and often rendered palatable by means of competitions, there is a good deal of grammatical instruction, and the less familiar words occurring in the text are skilfully explained in French in a special section. Throughout we admire the underlying ingenuity and skill of a sound teacher, and we offer *L'Echo de France* and its editor our hearty good wishes.

VACATION TERM FOR BIBLICAL STUDY AT OXFORD.—The Vacation Term for Biblical study held at St. Hugh's College, Oxford, from July 29 to August 12, was attended by about 160 students, including a large number of both head and assistant mistresses of secondary schools, together with deaconesses and others engaged in religious teaching of various kinds both in England and abroad. The keynote of the Term was "The Person and Work of the Holy Spirit," and proceedings opened on the first Sunday with an address on Inspiration by the Bishop of Oxford. Dr. Burge showed how the Hebrew nation, whilst possessing many elements of its religious thought and practice in common with other nations, was unique in its power of progress to great spiritual heights; and in this he traced its inspiration. Four courses of lectures were given during the fortnight, each concluding with a conversation class; there were also single lectures and Hebrew and Greek Testament readings. Two lectures on "Good and Moral Good" were given by Miss Jourdain, and there were single lectures by Prof. C. H. Turner on "The Earliest Problems of the Apostolic Age," by Canon Nairne, Regius Professor of Divinity at Cambridge, on the Book of Job, and by Miss Bevan on "Recent Biblical Literature."

UNIVERSITY SCHOLARSHIPS FOR WOMEN.—The list of scholarships awarded to women in 1922 at the Victoria University of Manchester is an imposing one. No less than 13 women graduates have received awards including one fellowship (renewed), seven research scholarships and studentships, and five graduate prizes. Six awards of scholarships and the University medical prize have gone to women in residence while six Entrance Scholarships and one Entrance Exhibition have been awarded. A scholarship and a bursary, both at Ashburne Hall, have been awarded under the auspices of the University to secondary school girls. Six scholarships at the London (Royal Free Hospital) School of Medicine for Women have been awarded to London women medical students.

LANTERN SLIDES FOR ENGINEERING LECTURES.—Messrs. Tangyes, Limited, Cornwall Works, Birmingham, have available for loan (free of charge) to engineering lecturers and technical instructors, a large and varied selection of lantern slides of their manufactures, comprising gas engines and suction gas producers, oil engines, steam and power pumps, hydraulic machinery, machine tools, &c.; also an assortment of slides of historical interest dealing with these subjects. A list of the slides will be sent free on application.

PUPIL TEACHERS IN ARMY SCHOOLS.—The pay of pupil teachers in Army schools was altered from September 1 to the rate of 10s. a week during the first year, after passing the examination for appointment, and to the rate of 12s. 6d. a week in the second and succeeding years, subject to passing the first year's examination. It is, however, provided in an amendment to the Pay Warrant that pupil teachers shall not be paid beyond three years except in special circumstances at the discretion of the Army Council. At stations abroad in exceptional circumstances a suitable person may be appointed temporarily, without examination, to perform the duties of a pupil teacher at the minimum rate of pay.

INTERNATIONAL FEDERATION OF UNIVERSITY WOMEN. REPORT OF THE SECOND CONFERENCE. (International Federation of University Women, 92 Victoria Street, S.W., 1s. net.)—The Report of the Second Conference of the International Federation of University Women, held in Paris last July, suggests that the organization is making steady headway. Delegates from sixteen national federations attended the meeting, including many of the most distinguished academic women of the various countries represented. Many interesting questions were discussed including the future admission of the University Women of Germany, and the conclusions reached were characteristically tolerant and moderate. Reports from the different national associations forming the International illustrate the general unity of aim between them as well as certain differences of method. The Federation aims at promoting friendship between women who have had the common experience of a university training, considering that it is of the first importance to the peace of the world that the educators of the coming generation should have a broad outlook and that nothing is so broadening as to live and make friends with the people of other countries. Prof. Spurgeon, the President of the Federation, spoke on the need of establishing international clubhouses in all the great cities of the world, the scene of the Conference—a clubhouse opened in Paris by the University Women of America—giving special point to her appeal for a similar house in London. The British Branch of the Federation hopes to be able to build one incorporating the old Tudor building of Crosby Hall on Chelsea Embankment. Other discussions on the programme of the Federation make it clear that the road to international peace is likely to be made smoother and easier by the determined and vigorous work which the members of this Federation are doing.

EQUAL FRANCHISE DEMONSTRATION.—On November 8, at the Central Hall, Westminster, at 8 o'clock, the National Union of Societies for Equal Citizenship is holding a big Mass Demonstration to demand Equal Franchise for men and women. Miss Eleanor Rathbone, C.C., J.P., will be in the chair, and the list of speakers will include Miss Margaret Bondfield, J.P., Lady Bonham-Carter, Mrs. Henry Fawcett, J.P., Miss Daisy Richardson, Miss Maude Royden, and Mrs. Wintringham, M.P. The presence of such a platform shows that the demand for Equal Franchise is becoming more insistent. It is not always realized that six million women are still unenfranchised, and that these women constitute for the most part those who are engaged in industry and the professions. Admission is free; reserved tickets, 5s., 2s. 6d., and 1s.; Societies of six members and over.

25., fifteen members and over, 18.; obtainable from the National Union of Societies for Equal Citizenship, 62 Oxford Street, W. 1.

INTERNATIONAL LABOUR CONFERENCE.—Lord Burnham has been invited to act as president of the forthcoming International Labour Conference, which opens this month, and it is hoped that he will repeat the striking success he achieved in the difficult position of chairman of last year's general session of the Conference. The International Labour Conference of the League of Nations is organized on somewhat novel lines, the employers' and workers' representatives attending side by side with Government representatives. The agenda for the coming Conference comprises the revision of Part XIII of the Treaty of Versailles with the view of (a) reforming the constitution of the governing body of the International Labour Office, so as to give greater representation to non-European States; and (b) modifying the number of meetings of the Conference in order that conventions passed at the conferences, which have to be placed before the Parliaments of the fifty-four countries belonging to the organization, may be ratified or otherwise within the time limit laid down by the Treaty. The second item on the agenda relates to the communication to the International Labour Office of statistical and other information regarding emigration and immigration and the repatriation and transport of emigrants. A long debate on the question of unemployment is also expected upon the presentation of the exhaustive report on unemployment throughout the world.

VILLAGE CONCERTS.—Some three years ago a scheme for providing concerts in villages and country towns was started and since then no less than 555 concerts have been given. The concerts, so far as possible, are left in the hands of local organizers; a party of five professional artists is sent from London to provide the main items of the programmes, the remainder being filled up by local choirs and schools. Generally the artists undertake a tour lasting a week or ten days, but single concerts are also given. In all 56 such tours have been carried out through most of the English counties, and at a few places in Scotland, with striking success. The programmes contain good classical music and folk-songs and they have fully justified the organizers' belief that "good" music is appreciated as much in the smallest villages as in big towns. But it is not only general audiences that benefit by this excellent organization. School concerts are also arranged. Sometimes the usual type of programme is given but selections more definitely educational are provided, such as the works of a single composer or of works representative of a particular school of composers. Another feature particularly suited for schools is a series of short lectures illustrated by music which should prove extremely valuable in imparting a real knowledge of music. This organization, particulars of which can be obtained from Miss Paget, 20 Clarendon Road, London, W. 11, is doing excellent work in taking the masterpieces of the world of music to the countryside.

UNIFORMITY IN WELSH SECONDARY SCHOOLS.—In the July issue of the *County Schools Review* is printed the presidential address delivered by Mr. E. D. Jones to the Welsh County Schools Association at Shrewsbury. Mr. Jones discusses some of the criticisms levelled at Welsh secondary schools and among them deals with the suggestion that there is little variety in the subjects offered. This, he believes, is a criticism due to the lack of bias towards local industries shown by the schools. Generally the amount of bias is limited by the great variety of local industries, and frequently pupils in secondary schools are sent there in order specifically to enable them to enter a calling different from that followed by their parents. Mr. Jones is of opinion, however, that in a general way regard is shown to local industry, the schools in industrial areas giving particular attention to physics and chemistry, many of them touching on engineering and industrial chemistry while in rural districts botany is more prominent, often with a bias towards agriculture.

BIBLIOGRAPHIES.—Two valuable pamphlets have been issued recently by the Historical Association (22 Russell Square, W.C. 1), namely, the "Annual Bulletin of Historical Literature," No. XI, dealing with publications of the year 1921, and the "Bibliography of Modern History, 1500-1789" (Leaflet No. 52). The former of these publications, which is edited by Prof. F. J. C. Hearnshaw, is divided into nine sections: ancient history, by A. M. Woodward; early mediæval history, A.D. 300-1000, by Miss Alice Gardner; mediæval history, A.D. 1000-1200, by Prof. F. M. Powicke; later mediæval history, A.D. 1200-1485, by Miss E. E. Power; the sixteenth century, by J. E. Neale; the seventeenth century, by Prof. F. C. Montague; the eighteenth

century, by H. W. V. Temperley; the nineteenth century and after, and a general section, by Prof. Hearnshaw. Comments are made on the character and scope of each work as it is mentioned. The Bibliography is divided into three sections; an introduction giving the scope of the pamphlet and indicating general works of reference; a list of works on the general history of Europe, 1500-1789; and a similar list on the political history of European States. The second section is sub-divided so that special aspects such as international relations, and industrial and commercial progress are dealt with, while the third section is also divided and various regions in Europe are covered in turn. A bibliography for the use of teachers of religious knowledge has been issued by a joint committee of head mistresses of High Schools and Licensed Teachers in Theology (Society for Promoting Christian Knowledge, Northumberland Avenue, W.C.; price 6d.). It is a revised edition of the "Scripture Bibliography" issued in 1915 with additional sections on Christian doctrine, the Prayer Book, Church history, and the teaching of religion. In each section, the easier books are marked and there are sub-divisions grouping books appropriate to teachers and those suitable for class-work.

EDUCATIONAL CONFERENCE AT AMBLESIDE.—The August number of the *Parents' Review* is devoted chiefly to a report, continued from the July issue, of the conference held at Ambleside in June last. It also contains the annual report (1921-22) of the Parents' National Educational Union, which has now been in existence for thirty-four years. The total membership of the Union has reached 3,500, while there are 318 schools, including 184 elementary and 100 secondary schools, working on the Parents' Union School syllabus, in addition to numbers of children being educated privately on the same system. New branches of the Union have been formed in New Zealand, British East Africa, and in Jerusalem.

THE VICTORIA LEAGUE.—The Victoria League, 22 Eccleston Square, S.W. 1, achieved its majority in April last, and the executive committee has published recently the twentieth annual report for the year ending March 31. The League was founded in memory of Queen Victoria, for the purpose of promoting closer union between British subjects in different parts of the world, and its activities take two main lines: (a) hospitality, (b) educational work. The Hospitality Committee appear to have had a busy year in welcoming and providing for the entertainment of overseas members visiting this country. The latter were again able to join in the Selborne Society's rambles in and near London. During the year the League co-operated in the arrangements for a holiday visit of some 150 teachers from Canada, organized by the "Overseas Education League." The outstanding feature of the Education Committee's work has been the provision of lecturers, notably for women's institutes, and there seems no doubt that this aspect of the League's work is growing in popularity. A great deal of valuable work has also been done in providing a circulating library of books, pictures, and lantern slides in schools, principally to illustrate history and geography lessons, and efforts are being made to develop a system of exchanges of exhibits between schools in this country and those in the Dominions overseas.

CLASSES FOR TEACHERS.—The London County Council has continued its excellent practice of providing a series of lectures and classes for teachers during the session 1922-23, and recently a handbook has been issued giving particulars and outlines of the various courses. For those who are not acquainted with the handbook from the experience of previous years, it will be necessary to state that the courses are grouped according to subject, and vary in length from four to thirty lectures, though the usual number is about ten. The object of the scheme is to give teachers an opportunity of improving their knowledge of school subjects, of widening their outlook, and of coming into contact with recognized authorities in various branches of learning. It is impossible in the space available to deal with all the courses; it must suffice to state that there are groups of courses on art, domestic subjects, economics, and political science, English and foreign language and literature, geography, handicraft, history, mathematics, music, pedagogy, phonetics, physical education, science, and a miscellaneous group, and there appear to be lecturers of eminence for each. Though the fees for these courses have been increased, they are still extremely low, even for the teacher outside the London area, who has to pay 50 per cent extra, and teachers would do well to avail themselves of the excellent opportunities provided. Copies of the handbook can be obtained from the Education Officer, The County Hall, Westminster Bridge, S.E. 1.

EDUCATIONAL APPLIANCES.—When in the nineteenth century practical work in science was introduced into schools, it became evident that there was a real difference between apparatus suitable for demonstration by the teacher and that suited for the pupils' own use in making what relatively to their knowledge were *bona fide* discoveries. The same distinction is to be found to-day in the apparatus used in infant schools and lower forms in connexion with the mastering of the rudiments of number and language. Many devices for individual work have been produced but they are mostly for work intended to follow collective lessons. In order to enable collective teaching to be superseded by individual lessons, the apparatus used must satisfy a number of conditions which so far have not been clearly formulated. Dr. Montessori has claimed, and experience seems to have substantiated the claim, that her apparatus makes teaching by means of individual lessons possible in a large class. The appearance of the Dexterito Teaching Appliances, manufactured by Auto-Education under the direction of Dr. Jessie White, Director of the Auto-Education Institute, 93 Great Russell Street, W.C. 1, and likewise intended for a method of teaching which does not rely on collective lessons, should go far towards making clear what these necessary conditions are. The simplicity, convenience in storing, and relatively low price of these appliances as well as the way they cater for the special needs of British children, should commend them to very many teachers who so far have not ventured upon auto-educational methods. The need for individual teaching is apparent to any one reading Mr. Cyril Burt's "Mental and Scholastic Tests."

WESTERN COMMUNIST UNIVERSITY IN MOSCOW.—As a counterpart to the already existing "Eastern Communist University," the function of which it is to train 600 Asiatics in the communist spirit, in order that they may become leaders of the "still dormant millions of the East," a "Western University" has been founded in Moscow. The new University has at present six departments—a Jewish, a Lettish, a Lithuanian, a German, a Polish, and a Roumanian. The students are maintained—fed, housed, and clothed—by the State during the whole period of their study. The principal subjects of work include "Historical Materialism," History of the Revolution, the Relation of Religion and Communism, Constitution of the Russian Socialist Federative Soviet Republic, the Red Army, the Dictatorship of the Proletariat.

A CHILDREN'S ENCYCLOPAEDIA.—Messrs. Cassell & Co., Ltd., are issuing a "Children's Book of Knowledge" (price 1s. 3d. net) which is to be complete in about forty-eight fortnightly parts. The topics discussed are arranged in alphabetical order, and in Part 2, which is before us, the first article is on Alaska and the last on Antwerp. Although the first and last items happen to be of a geographical nature, other topics of general interest are well represented; there are articles on Alexander, Alfred the Great, the animal kingdom and on several animals, on flowers, on noteworthy writers whose names begin with A, and so on. Thus in any one number there is a sufficiency of variety of subject to interest and stimulate the most impatient of seekers after knowledge. There is abundance of illustrations in the text and Part 2 contains, in addition, sets of photogravures of Alpine and Antarctic scenery. The articles are informative but simply written and we think that adults as well as children will read the "Book of Knowledge" with interest and profit.

CIRCULAR 1286.—The Joint Committee of the Four Secondary Associations has formulated its objections to this circular and copies have been sent to Local Education Authorities. The Committee considers the time allowed for consideration of the circular to be too short; that clause 3 takes no account of the teachers' many and necessary activities other than teaching; and that clause 8 is inconsistent with the School Teachers' (Superannuation) Acts, 1918 and 1922. Further, the Committee is of opinion that teachers' associations should be consulted before entering into new forms of agreement.

DECIMALIZATION.—The September issue of the *Decimal Educator* contains the inaugural address of the new president, Sir Richard Gregory, entitled, "The Position and Outlook." Sir Richard takes the view that the value of the metric system is undisputed both in commerce and in education, where it would save much valuable time, and that the only real objection to its adoption in Great Britain is the prejudice in the minds of most people against new measures and denominations. In conclusion, he makes a most reasonable and useful suggestion;

let the Government make the metric system the sole legal system in all departments of State and the adoption of the system by the general public will then become solely a matter of time. This should be a promising line of policy for the Decimal Association.

THE OXFORD PRESS.—Although an advertisement, the *Periodical*, issued by the Oxford Press, always makes interesting reading. The September issue contains a number of extracts from "The War in the Air," published in June last, together with some appreciative remarks of its author, the late Sir Walter Raleigh. This work formed the culminating effort of a long life of literary activity, and the bibliography of his works which is given shows that during the last two decades, few years passed without one or more publications from his pen. An interesting announcement in the current issue is the early publication of a facsimile edition of the "Codex Sinaiticus," made from negatives taken at Petrograd and in Leipzig by Dr. Lake and his wife in 1913. The production of this text has been made possible by the British Academy, which received an anonymous gift for this purpose in 1913. In June last the honorary degree of M.A. was conferred on Mr. F. Hall, controller of the Oxford Press, and the Public Orator's speech in presenting Mr. Hall for the degree pays tribute to his valuable services at the University Press during the past forty years.

INDUSTRY AND WELFARE.—At the third annual lecture conference organized by the Industrial Welfare Society at Oxford during September last, the dominating note was co-operation, and many papers were read offering, and in some cases, describing definite constructive projects. Among the proposals suggested was that of Mr. F. S. Button for the control of industries by representative boards, consisting of representatives of finance, management, workpeople, and consumers. The value of the work of the welfare supervisor was emphasized by Mrs. K. Carney, who dealt with the work's clinic, and its curative, preventative, and educational aspects, and by Dr. H. M. Vernon, who spoke of the value of the supervisor's record in determining the direction of waste and indicating ways of increasing efficiency in industry. Schemes for developing the interest of workpeople in their work were described by Mr. G. B. Lloyd, who outlined a system of rewarding employees for useful suggestions, and by Mr. A. F. Ferguson, who described a works' savings bank and investment scheme, both of which have been in successful operation for a number of years.

MATHEMATICAL TEACHING.—The London Branch of the Mathematical Association has arranged meetings during this session at the London Day Training College on the teaching of mathematics. On November 18, there will be a discussion on the use of symmetry in geometrical teaching; on December 2, a paper on "Knowledge, Mathematic and Mythologic"; and papers on the teaching of algebra and mechanics on February 24 and March 24 respectively. Sir George Greenhill's presidential address will be delivered on February 3.

EVENING CLASSES IN GEOGRAPHY.—An evening school of geography has been organized by University College, London, and courses of lectures are given on the physical basis of geography (Prof. E. J. Garwood), the Use of Instruments (Prof. M. T. M. Ormsby and Miss I. J. Curnow), and on regional and historical geography (Prof. L. W. Lyde). The school will be open for the three terms of the academic year and the University diploma in geography can be obtained on the results of an examination in June next. Applications should be addressed to the Secretary, University College, Gower Street, W.C. 1.

NATIONAL UNION OF TEACHERS.—The annual report for 1922 of the National Union of Teachers has recently been issued (The Schoolmaster Publishing Co., Ltd., 3 Racquet Court, Fleet Street, E.C. 4; price 2s. 6d.). This valuable document of more than 800 pages is, indeed, more than a report, for included within its covers is a directory of the members of the Union, which is extremely useful for purposes of reference. Turning, however, to the portion which is more strictly the "report," there is an interesting table showing the growth of the Union since its inception in 1870. In the first year the number of associated societies was 26 and the total membership 400. Two years later, the figures were 107 and 5,054 respectively, and since that date there has been a steadily increasing rate of growth, with the exception of a few years in the early 'eighties, until in 1921 the number of associations concerned was 590 and the total membership 115,577. These are figures of which the Union may well be proud and they testify fully to the useful

place which the Union occupies among elementary school teachers. The report also contains an account of the annual conference held at Torquay on April 17-20 last, together with the resolutions which were passed. Among the latter it is of interest to note that "in view of the charges on the Sustentation Fund caused by dismissals, and in preparation for struggles to maintain or improve the Salary Scales during a period subsequent to March 31, 1925, the amount of the annual subscription to the Union be and is hereby increased by 21s. in respect of each of the calendar years 1923, 1924, and 1925." In addition there is to be a levy of 10s. per member during the current year. Evidently the Union is determined to be well prepared to uphold the status of its members.

ANGLO-BELGIAN UNION LECTURES.—The Anglo-Belgian Union, the object of which is the dissemination of mutual knowledge of the life and conditions in the two countries, has arranged with several distinguished persons for lectures in this country on Belgium. The lectures are available for colleges, schools, and local societies, and most of them can be given in either French or English as desired. Among those in the historical and general section of direct interest to teachers are "Education in Belgium—Primary, Secondary, and University," by Dr. P. Bonnel, and "Belgian Universities after the War," by Dr. H. F. Stewart. There are also special groups of lectures on the Belgian Congo by Sir Alfred Sharpe, Capt. G. B. Spicer Simpson, and others, and short courses on Belgian literature and art. So far, the Union has been able to provide, since its inception, some seventy lectures a year in this country and rather more in Belgium. Copies of the list of lectures available can be obtained from the Secretary, Educational Sub-Committee, Anglo-Belgian Union, 35 Albemarle Street, W. 1.

JOINT MATRICULATION BOARD SUCCESSES.—The class list for the July Matriculation Examination of the Joint Board of the Universities of Manchester, Liverpool, Leeds, Sheffield, and Birmingham, recently issued, show that a large proportion of the successful candidates prepared for the examination privately. In the first division there are seven names, and four of these candidates are marked "Private Study," while in the second division only about 50 per cent are connected with recognized schools. At the Supplementary Examination for candidates holding the Matriculation certificate, held at the same time, there were eighteen successful in additional mathematics, fifteen in Latin, and one in each of French, Natural History, and Chemistry. The last figures show a remarkable disproportion between the several subjects taken at this examination.

PRESERVATION OF SEA BIRDS.—There is a brief article in the summer number of *Bird Notes and News* on the effect on sea birds of oil on the surface of the sea. The oil, discharged chiefly from petrol-driven vessels, consists mostly of waste and refuse oil from the ships' tanks; fouls and clogs the plumage of sea birds making flying and diving difficult and frequently condemning the birds to death by starvation. In this country, the passing of the Oil in Navigable Waters Bill has mitigated the evil but international action is necessary for a solution of the problem. The newly-formed International Bird Protection Committee, of which Mr. G. Pearson, head of the Audubon Association of the United States, is president, will no doubt give valuable assistance, and the Royal Society for the Protection of Birds, 23 Queen Anne's Gate, S.W., is anxious to receive further evidence on which action may be based.

ON CHILDREN AND ON TEACHING ENGLISH.—The first issue, that for October, of the second year in its existence of the *Beacon*, signals a change of publishers and a welcome reduction in price to 1s. 6d. The character of the magazine remains unchanged and many of the items are of direct interest to the teacher. "Out of the mouths . . . ?" is a stimulating article with a suggestion for solving the problem of how to educate children to fit them for life in this troubled world; the author concludes that salvation lies in encouraging the inquiring type of mind as opposed to loading children with information. Another thoughtful article, "The Study of Words," deals with the teaching of English in elementary schools and some useful suggestions are made on correlating this subject with history and geography. On the other hand, it is suggested that history and geography would both gain in interest and value by a study of the meaning of words. No scheme of instruction is offered but the suggestion is there for the practical teacher to work upon. The current issue also contains a trenchant and critical review of recent literary works with the idea of showing the present tendency of literature in this country.

BOOKS OF THE MONTH.

Art.

- The Charm of Childhood: Masterpieces of Painting. With a Preface by Ch. Moreau-Vauthier. *Heinemann*. 3s. net.
The Renaissance of the Greek Ideal. New and Revised Edition. By D. Watts (Mrs. R. Watts). *Heinemann*. 21s. net.

SOME RECENT OXFORD BOOKS ON HISTORY

Great Britain

A New History of Great Britain.

By R. B. MOWAT. *From the Roman Conquest to the Outbreak of the Great War. Complete with 420 Illustrations and 9 Genealogical Tables.* 10s. 6d. Also in Three Parts. Part I. *From the Roman Conquest to the Death of Queen Elizabeth.* With 116 Illustrations and Maps, and an Index. 4s. 6d. Part II. *From the Accession of James I to the Treaty of Vienna.* With 133 Illustrations and an Index. 4s. 6d. Part III. *From the Treaty of Vienna to the Outbreak of the Great War.* With 177 Illustrations and an Index. 4s. 6d. And in several sections to cover periods set at various examinations. Full particulars on application.

The Story of England.

By MURIEL O. DAVIS. New edition. Part I: *To the Death of Queen Elizabeth.* With 32 Illustrations and 10 Maps. Part II: *From James I to the Death of Queen Victoria.* With 26 Illustrations and 6 Maps. 2s. 6d. each. Complete, 4s. 6d.

A Short Economic History of England.

By CHARLOTTE M. WATERS. Part I. *From the Conquest to the Middle of the Eighteenth Century.* With 116 Illustrations. 5s. 6d.

"This is quite one of the best school histories of the kind. . . . The book should be in every school library, and should be used freely in the history class."—*Scottish Educational Journal*.

The Golden Fleece.

An Introduction to the Industrial History of England. By G. W. MORRIS and L. S. WOOD. 3s. 6d.

"To study the growth of a trade is to see the development of our national life from a new and more intimate point of view."

Ireland

Ireland. From the Earliest Times to the Present Day.

By ROBERT DUNLOP. 7s. 6d. net.

[*Histories of the Nations.*

"Fortunately, I have no theory to serve. Every history must bear a personal tinge, and all that can reasonably be demanded from an historian is that he should make himself as fully acquainted as possible with the facts and that he should be scrupulously honest in his use of them. I have endeavoured to satisfy both these canons."—*From the Preface.*

The Empire

The Expansion of Britain from the Age of the Discoveries.

A Geographical History. By W. R. KERMACK. With 10 Maps. 2s. 6d. net.

The Age of the Discoveries. How Britain became a Sea Power. British North America. The Indian Empire. The Union of South Africa. The Commonwealth of Australia. The Dominion of New Zealand. The Sea-Ways of Empire.

[*World's Manuals.*

The British Empire.

A Short History by J. P. BULKELEY. With an Introduction by Sir CHARLES LUCAS. 3s. 6d.

"This is an admirably designed history book for school use. The story of the Empire is lucidly told, and the short bibliographies appended to the several chapters greatly enhance its value."—*Schoolmaster.*

The Ancient World

The Legacy of Greece.

Edited by R. W. LIVINGSTONE. Illustrated. 7s. 6d. net.

Contents: Hellenism, by Gilbert Murray; Religion, by W. R. Inge; Philosophy, by J. Burnet; Mathematics and Astronomy, by Sir T. Heath; Biology, by D'Arcy W. Thompson; Medicine, by Charles Singer; Literature, by R. W. Livingstone; History, by Arnold Toynbee; Political Thought, by A. E. Zimmerman; Sculpture, by Percy Gardner; Architecture, by Sir Reginald Blomfield.

"A vigorous and wholesome book, and one can only hope it may be read half as widely as it deserves; and the nation will be vastly better for it."—T. R. GLOVER in the *Daily News*.

Ancient Greece.

A Study. By STANLEY CASSON. With 12 Illustrations and 2 Maps. 2s. 6d. net.

"This brilliant little essay on the history, life, and thought of the old Greeks is precisely what many people need as an introduction to Greek studies. Mr. Casson's essay should be widely read."—*Spectator*.

[*World's Manuals.*

Ancient Rome: Lives of Great Men.

Told by MARY AGNES HAMILTON. With Translated Passages by C. E. FREEMAN, and 53 Illustrations. 2s. 6d.

The Growth of Rome.

By P. E. MATHESON. With 10 Illustrations and 3 Maps. 2s. 6d. net.

An attempt to suggest some of the chief characteristics that give its significance to the story of ancient Rome, from early times down to Marcus Aurelius. Illustrated with photographs, and with drawings by E. Lear, Francis Towne, John Robert Cozens, and Guy Head.

[*World's Manuals.*

European and General History

Saints and Heroes of the Western World.

By MURIEL O. DAVIS. With 36 Illustrations and an Index. 3s. 6d.

An attempt to interest those who are beginning the study of European History by means of the biographies of a few great men:—Constantine the Great, Theodoric, St. Benedict of Nursia, Justinian, Gregory the Great, Charlemagne, the Emperor Henry IV and Pope Gregory VII, St. Bernard of Clairvaux, St. Francis of Assisi, Cola di Rienzi, St. Catherine of Siena, Erasmus, Martin Luther, Savonarola, Ignatius Loyola.

Movements in European History.

By LAWRENCE H. DAVISON. With 14 Maps. 4s. 6d. net.

Outlines of European History.

By M. O. DAVIS. New edition, revised to 1914, with 80 Illustrations. 3s. 6d.

Outlines of Modern History.

By J. D. ROGERS. New issue, with 45 Illustrations and Maps. 4s. net.

The Living Past, a Sketch of Western Progress.

By F. S. MARVIN. Fourth Edition. 5s. 6d. net.

Looking Backward; Childhood of the Race; Early Empires; Greeks and Romans; Middle Ages; Renaissance; Modern Science; Revolution Industrial and Political; Progress; Looking Forward.

The Teaching of History.

By C. H. JARVIS. 5s. 6d. net.

Also Domestic Science branch for Seniors. Cookery, Laundry, Housewifery, Dressmaking, Millinery, Upholstering, and Handicrafts. Fees moderate.—For prospectus apply to the PRINCIPALS.

NAUTICAL COLLEGE, PANG- BOURNE.

Primarily for training officers for Mercantile Marine. Age: over 13 years and under 15 years 6 months. Fees: £160 p.a. Subject to Admiralty regulations, nominations to Royal Naval College, Dartmouth, and for R.N.R. training as Probationary Midshipmen; preparation for Special Entry into Royal Navy.

Competitive Examination in May for 3 Scholarships of £20-40 p.a., tenable for 3 years.

Early application should be made to Messrs. DEVITT & MOORE, 12 Fenchurch Buildings, London, E.C. 3.

"EVERSFIELD," SUTTON, SURREY.

A Boarding School for the
Daughters of Gentlemen.

Head Mistress: Miss F. C. M. BARKER, B.A.

(late Senior English Mistress, Newcastle High School), from whom Prospectus can be obtained. The Senior and Junior Boarding Houses stand in their own grounds, having Tennis Courts, Net Ball pitch, Kitchen Gardens, and Greenhouses.

The aim of the School is to give a thorough education to girls up to 19 years of age. No examinations are taken in the Lower School. Girls over 17 years of age may take a special course in Domestic Science. A School Scholarship is awarded annually on the result of the Midsummer Examinations. Pupils under 12 are not required to pass an Entrance Examination. Special attention is given to physical development. This department is under the care of a fully trained resident Mistress.

The School being within easy reach of London, the pupils are able to have many educational advantages.

SCIENCE OF THOUGHT.—Parents

Teachers, and others interested in starting a school where children shall be taught on a "Science of Thought" basis, are asked to communicate with Address No. 11,295.*

Posts Vacant—continued.

REQUIRED (January), experienced, young French Mistress (Metric standard), able to teach German (not advanced), elementary Latin if possible. £100. HOOPER'S (EDUCATIONAL AGENTS), LTD., 361 Oxford Street, London, W. 1.

RESIDENT MUSIC MISTRESS.

Wanted January, North of England. Well qualified and experienced in Associated Board exam. work, Violin, Singing, Piano, Theory. Salary £75 to £100. Apply Address No. 11,300.*

LECTURERS.

SUNDERLAND EDUCATION COMMITTEE.

TRAINING COLLEGE.

Wanted, a Lecturer (Woman) on BOTANY and GEOGRAPHY, to begin work after the Christmas Vacation.

An Honours Degree and Residential experience desirable.

Salary according to the Burnham Scale for Secondary Schools.

Applications must reach the CHIEF EDUCATION OFFICER, 15 John Street, Sunderland, on or before Tuesday, December 12, 1922.

HERBERT REED,

Chief Education Officer.

Education Offices,
15 John Street, Sunderland.
November 23, 1922.

PHYSICAL TRAINING, REMEDIAL GYMNASTICS, &c.

ANSTEY PHYSICAL TRAINING COLLEGE, ERDINGTON, BIRMINGHAM (SWEDISH SYSTEM),

offers complete Training for Teacher's Diploma in Swedish Educational Gymnastics, Medical Gymnastics and Massage, Dancing, Hockey, Lacrosse, Cricket, Tennis, Net Ball, Swimming, Anatomy, Hygiene, Physiology, Theory of Education, &c.

Students not received under 18 years.

THREE YEARS' COURSE.

For Prospectus apply—The Secretary.

BRISTOL PHYSICAL TRAINING COLLEGE, 30 APSLEY ROAD, CLIFTON, BRISTOL.

TRAINING in Swedish Gymnastics, Tennis, Hockey, Cricket under a County player. Swimming, Massage and Remedial Gymnastics under a certificated Masseuse. Anatomy, Physiology, Hygiene. Dancing, Ballroom and Ballet, Dalcroze Eurhythmics.

Students prepared for the advanced certificate of the English Folk Dance Society.

Residential fees on application to—The Principal, Miss JENNINGS.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal: Miss STANSFELD.

The object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over three years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology, and Hygiene, Dancing, Lacrosse, Lawn Tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer. Fees: £165 per annum.

For Prospectus apply—SECRETARY, 37 Lansdowne Road, Bedford.

CHELSEA COLLEGE OF PHYSICAL EDUCATION FOR WOMEN. (SWEDISH SYSTEM.)

Three Years' Diploma Course of University Standard. The training afforded to students at this College enables them to secure appointments of the highest standard. Students are admitted in September only, and at present applications should be made twelve months in advance.

Apply for Prospectus to Miss DORETTE WILKIE (Room 85), S.W. Polytechnic Institute, Chelsea, London, S.W. 3. Tel.: Kensington 899.

LIVERPOOL PHYSICAL TRAINING COLLEGE, and Officers' Training College for the Girl-Guide Movement.

(FOUNDED 1900.)

The College is divided into two—Junior and Senior—and the Course is from 2½ to 3 years. The Swedish system is taken. also Rhythmic Exercises, Dancing (all branches), Swimming, Fencing, Sports, and Games.

Massage, Remedial Exercises, Hospital Practice.

Great opportunity for teaching and gaining practical experience. Three gymnasiums. 18 acres of grounds for games.

IRENE M. MARSH,
Principal.

THE LING ASSOCIATION.

(And Affiliated Gymnastic Societies.)

FOUNDED 1899.

Offices: 10 Mecklenburgh Square, London, W.C. 1.

EXAMINATIONS held for Teachers' Diploma in Swedish Educational and Medical Gymnastics.

The Association keeps a list of certificated Gymnastic and Games Mistresses, and Medical Gymnasts—and publishes "Good and Bad School Postures," 5s.; Net Ball Rules, 3d.; Game of Net Ball and How to Play it, 1s.; Rounders Rules, 3d.; Scandinavian Dances, 3d.; Music to Dances, 9d. All post free. For these, and Terms of Membership, Conditions of Examinations, Entrance Forms, Syllabus, &c., applications should be made to the Hon. Secretary, Miss MARY HANKINSON.

THE BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE, Kingsfield, Dartford Heath, Kent. See page 747.

ISSUE.

MATRICULATION AND OTHER EXAMINATION NOTICES, SCHOLARSHIPS, FELLOWSHIPS, EXHIBITIONS, STUDENTSHIPS, and BURSARIES.

A TRAVELLING Fellowship of \$1,000, open to all members of the International Federation of University Women, is offered by the American Association of University Women for the year 1923-4. Full particulars may be obtained from the SECRETARY, British Federation of University Women, 92 Victoria Street, S.W. 1, to whom applications must be sent in by January 1, 1923.

BEDFORD SCHOOL.—Head Master: REGINALD CARTER, M.A. An Examination will be held at Bedford in March, 1923, for 4 Exhibitions £50-£40, and 6 Nominations £10-£20 for Boarders, and 4 for Day Boys. Apply for particulars to—HEAD MASTER, Bedford.

OLD BEDFORDIAN WAR MEMORIAL EXHIBITIONS.—Seven Exhibitions are offered to Sons of Old Bedfordians on certain conditions. For particulars apply—HEAD MASTER, Bedford School.

BISHOP'S STORTFORD COLLEGE. ENTRANCE SCHOLARSHIP EXAMINATION.—An EXAMINATION is held annually in June, when SCHOLARSHIPS, EXHIBITIONS, and BURSARIES, varying from £50-£10, are offered.—Apply to the Head Master, Mr. F. S. YOUNG M.A.

BRIGHTON COLLEGE.—An Examination will be held June 6-7 to elect to EIGHT SCHOLARSHIPS varying in value from £60 to £45 a year. Full particulars on application to the HEAD MASTER.

SCHOLARSHIPS.

FARADAY HOUSE ELECTRICAL ENGINEERING COLLEGE.—Examinations for SCHOLARSHIPS tenable in College and Manufacturing Works are held annually in April. For particulars apply to CHIEF CLERK, 66 Southampton Row, W.C. 1.

FRAMLINGHAM COLLEGE, SUFFOLK.

PUBLIC SCHOOL, Incorporated by Royal Charter. Head Master: F. W. STOCKS, M.A. Inclusive Fees, £57 to £66 per annum. Modern Laboratories and Workshops.

EXAMINATION for ENTRANCE SCHOLARSHIPS IN March.

Illustrated prospectus and full particulars on application to the HEAD MASTER or the SECRETARY.

GUY'S HOSPITAL MEDICAL SCHOOL.

OPEN ENTRANCE SCHOLARSHIPS.

Two OPEN ENTRANCE SCHOLARSHIPS, each of the value of £100, will be awarded, one in Arts and one in Science, in September, 1923.

GUY'S HOSPITAL DENTAL SCHOOL.

OPEN ENTRANCE SCHOLARSHIPS.

An OPEN WAR MEMORIAL SCHOLARSHIP in Arts, of the value of £40 per annum, for four years, will be awarded in September, 1923.

An OPEN ENTRANCE SCHOLARSHIP in Science, of the value of £40 per annum for not more than four years, will be awarded in September, 1923.

Full particulars of the conditions and copies of previous Examination Papers can be obtained from the Dean, Guy's Hospital Medical School, London, S.E. 1.

KENSINGTON HIGH SCHOOL (G.P.D.S.T.)

MUSIC TRAINING DEPARTMENT.

Admission in September, January, and May.

THREE SCHOLARSHIPS awarded annually.

For information apply to the HEAD MISTRESS, Kensington High School, St. Alban's Rd., Kensington, W. 8.

KING'S SCHOOL, CANTERBURY.—ENTRANCE and KING'S SCHOLARSHIPS. Some FIFTEEN SCHOLARSHIPS each June and November. For particulars apply to Head Master—A. LATTER, M.A.

ST. JOHN'S SCHOOL, LEATHERHEAD.—In addition to sons of living clergy elected on the Free Foundation, Supplementary Foundationers (sons of living clergy only) are received at the annual fee of 45 guineas. The School is also open to sons of Clergy or Laymen paying full fees, viz. Clergy 95 guineas, Laymen 105 guineas per annum. Day-Boys 33 guineas per annum. Modern School buildings for 240 boys. Boys prepared for the Universities, Army and Civil Service Examinations, &c. Leaving Scholarships. One or two Albany Scholarships awarded each year. Also three Entrance Scholarships, value £45, £35, and £25 per annum. Scholarship examination for 1922 and 1923 on the first Wednesday in July; entries close the last day of June. For Prospectus, &c., apply to the Head Master, the Rev. E. A. DOWNES.

S. PETER'S SCHOOL, YORK.

AN Examination for Scholarships and Exhibitions, varying from £50 to £15, is held annually in May. General knowledge is required in preference to specialization in one subject. Exhibitions also awarded on the Common Entrance Examinations.

Further details from—

S. M. TOYNE, M.A., Head Master.

THE BRITISH FEDERATION OF UNIVERSITY WOMEN offers a Prize Fellowship of £100 to assist the holder to carry on research in Arts during the year 1923-4. The Fellowship is open to all members of the International Federation of University Women.—Full particulars may be obtained from the SECRETARY, British Federation of University Women, 92 Victoria Street, S.W. 1, to whom applications for the Fellowship must be sent in by February 20, 1923.

Posts Vacant.

POSTS ABROAD.

LADY TEACHERS are earnestly advised to consult the Continental Secretary of the Girls' Friendly Society, 14 & 16 Holbein Place, Sloane Square, London, S.W. 1, before accepting any post abroad. Apply by letter, enclosing stamped addressed envelope. A small charge is made for verification.

SCHOLASTIC, CLERICAL, AND MEDICAL ASSOCIATION, LTD.

THE above Association is in a position to offer to well qualified ladies and gentlemen first-rate Scholastic Appointments in all parts of the country. Candidates should write with full particulars as to age, qualifications, experience, &c., &c., to GENERAL MANAGER, 12 Stratford Place, Oxford Street, W. 1. No charge for registration.

PROFESSORSHIPS.

UNIVERSITY COLLEGE, NOTTINGHAM.

CHAIR OF EDUCATION.

The Council invite applications for the Professorship of Education.

The position will carry with it the Wardenship of Mapperley Hall Hostel for Men. Salary £700 with Board, Residence, &c., at Mapperley Hall.

Further particulars and Forms of Application, which must be returned not later than December 16, 1922, may be obtained from

J. E. SHIMELD, Registrar.

THE ROSE SIDGWICK Memorial Fellowship. open to British Women of graduate standing, provides \$1,000 for graduate study in the United States during the year 1923-24. Full particulars may be obtained from the SECRETARY, British Federation of University Women, 92 Victoria Street, S.W. 1, to whom applications for the Fellowship must be sent in not later than February 1, 1923.

WEYMOUTH COLLEGE.

SIX SCHOLARSHIPS for CLASSICS or MATHEMATICS,

of the value of £40 downwards, and open to boys between twelve and fourteen,

are offered annually for Competition.

Next Examination will be in June, 1922.

For Prospectus and other information apply to the HEAD MASTER.

WESTFIELD COLLEGE. (UNIVERSITY OF LONDON.)

Chairman of Council:

T. W. H. INSKIP, Esq., K.C., M.P.

Principal: Miss E. C. LODGE, M.A., F.R.Hist.S.

FOUR SCHOLARSHIPS, one of £75, the others of £50, will be offered for competition in April, 1923.

A certain number of EXHIBITIONS may also be awarded.

Students are prepared for the Arts and Science Degrees of the University of London.

Fees.—Residence £90 a year; Tuition from 38 guineas a year.

For further particulars apply to the PRINCIPAL—WESTFIELD COLLEGE, Hampstead, N.W. 3.

Posts Vacant—continued.

MASTERSHIP.

APPLICATIONS are invited for Two Posts of Assistant Schoolmaster in the Education Department, Hong Kong.

Commencing salary, £400 per annum, rising by annual increments of £20 to £600 per annum, and in the case of specially qualified candidates to £750. Free passage to Hong Kong is provided. Candidates should be between 23 and 30 years of age; should be trained teachers, graduates, with experience of class teaching, and able to teach Physics, Chemistry, and Mathematics up to Matriculation standard. Further particulars of these appointments and Forms of Application can be obtained from "C. A." The Secretary, Board of Education, Whitehall, S.W. 1. Scottish candidates should apply to the Secretary, Scottish Education Department, Whitehall, S.W. 1.

PHYSICAL.

PORTSMOUTH EDUCATION COMMITTEE. (Higher Education.)

GIRLS' SECONDARY SCHOOL.

HEAD MISTRESS: Miss A. M. KENYON HITCHCOCK, B.A.

Required, in January next, a Mistress for Gymnastics and Games. Dartford training preferred. Burnham Scale. Forms of application, which should be returned, duly completed, by December 7th, may be obtained from the Secretary, Offices for Higher Education at the Municipal College, Portsmouth.

BRIDLINGTON High School for Girls.—Required for next term only, fully qualified Mistress for Swedish Gymnastics, Drill, and Games.—Apply, HEAD MISTRESS.

Continued on page 749.

BELL'S STANDARD TEXT-BOOKS

MATHEMATICS

Messrs. Bell's Mathematical Books are as a general rule issued complete with or without answers; in many cases the Examples are published separately; most of the books are also issued in parts. Please write for details.

MR. PENDLEBURY'S WORKS

- Pendlebury's Arithmetic.** With 8,000 Examples. 29th Edition. 5s. 6d.
Pendlebury and Robinson's New School Arithmetic. 20th Edition. 5s. 6d.
Pendlebury and Beard's Commercial Arithmetic. 15th Edition, Revised. 3s. 6d.
Pendlebury and Beard's Business Arithmetic. 3s. 6d.
Pendlebury and Beard's "Shilling" Arithmetic. 639th Thousand. 1s. 9d., or with answers, 2s. 3d.
Pendlebury and Robinson's New "Shilling" Arithmetic. 15th Edition. 1s. 9d., or with answers, 2s. 3d.
Pendlebury and Robinson's Junior Arithmetic. 13th Edition. With or without answers, 2s. 9d.
Pendlebury's Preparatory Arithmetic. 4th Edition. 2s. 6d.
Pendlebury's Elementary Trigonometry. 7th Edition. 5s.

TEXT-BOOKS by Messrs. BAKER & BOURNE

- Public School Arithmetic.** 6th Edition. 5s. 6d.
The Student's Arithmetic. 10th Edition. 4s.
A "Shilling" Arithmetic. 5th Edition. 1s. 9d., or with answers, 2s. 3d.
Elementary Algebra. 20th Edition. 6s.
A Shorter Algebra. 6th Edition. 3s. 6d.
A First Algebra. 9th Edition. 2s. 6d., or with answers, 3s.
Elementary Geometry. 13th Edition, revised. 5s. 6d.
A New Geometry. 5th Edition. 4s.
A First Geometry. 6th Edition. 2s. 3d.
Elementary Mensuration. 4th Edition. 2s. 6d.

Messrs. BORCHARDT & PERROTT'S WORKS

- Geometry for Schools.** 5s. 6d.
A New Trigonometry for Schools. 12th Edition. 5s. 6d.
A Junior Trigonometry. 2nd Edition. 4s. 6d.
A First Numerical Trigonometry. 2nd Edition. 3s. 6d.

Mr. C. V. DURELL'S TEXT-BOOKS

- A Concise Geometry.** By CLEMENT V. DURELL, M.A., Senior Mathematical Master, Winchester College. 2nd Edition. 5s.
Elementary Algebra. By C. V. DURELL, M.A., G. W. PALMER, late Master of the Royal Mathematical School, Christ's Hospital; and R. M. WRIGHT, M.A., Eton College. With detailed introduction and full answers, for teachers' use, 8s. 6d.; without introduction and with only select answers, 7s.

WORKS BY MR. R. C. FAWDRY

- Statics.** By R. C. FAWDRY, M.A., B.Sc., Head of the Military and Engineering Side, Clifton College. 6s., or in two parts. Part I 7th Edition. 3s. Part II, 5th Edition. 3s.
[Bell's Mathematical Series: General Editor, Prof. W. P. MILNE, D.Sc.]
Dynamics. 6s. Or Part I, 3rd Edition, 3s. Part II, 3s.
[The first parts of these two books have been issued bound together, in response to requests received from many teachers. 6s.]

- Co-Ordinate Geometry (Plane and Solid) for Beginners.** 5s.
[Bell's Mathematical Series.]

- Arithmetic.** By H. FREEMAN, M.A. 8th Edition. Price reduced to 2s. 9d.
[Bell's Mathematical Series.]

- A "Shilling" Arithmetic.** By J. W. ROBERTSON, M.A., B.Sc. 6th Edition. 1s. 9d.; with answers, 2s. 3d.
[Bell's Mathematical Series.]

- Arithmetic.** By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A. Part I, 5th Edition, 4s. Part II, 3s. 6d.
[Bell's Mathematical Series.]

- A Short Course in Commercial Arithmetic and Accounts.** By A. RISDON PALMER, B.Sc., B.A. 2s. 6d.
[Bell's Mathematical Series.]

- Practical Mathematics.** By A. DAKIN, M.A., B.Sc. 5s.
[Bell's Mathematical Series.]

- A Short Algebra.** By H. P. SPARLING, M.A. 2s. 4d.

- Elementary Plane and Solid Geometry.** Practical and Theoretical, *pari passu*. By V. LE NEVE FOSTER, M.A. In 3 vols., Vols. I and II, 3s. each; Vol. III (Solid Geometry), just published, 3s. 6d.
[Bell's Mathematical Series.]

- Plane Trigonometry.** By H. L. REED, M.A. 5th Edition. 5s.
[Bell's Mathematical Series.]

- Analytical Geometry of the Straight Line and Circle.** By JOHN MILNE, M.A. 5s. 6d.
[Bell's Mathematical Series.]

OCCASIONAL NOTES.

THE first of a new series of articles dealing with Educational Movements and Methods will appear in our next issue, together with a general introduction by Prof. Adams, who, it will be remembered, wrote the introductory article of the series "Supplementary Aids to Classroom Work," the last contribution of which will be found in the present number. Every inquiry and movement in the great field of education makes for the improvement of the nation, but the enthusiasm and aspirations of the earnest advocate often lead to unfulfilled hopes. Our aim in the present series is that each article shall describe first the characteristics of the subject, and then give a judicial survey of its advantages, difficulties, or educational opportunities, from the point of view of the practical teacher faced with many claims and an inelastic timetable. With this intention, arrangements for articles dealing with the following subjects have already been made: The Montessori System, The Dalton Plan, The Heuristic Method, Eurhythmics, Direct Methods in Modern Language Teaching, Reformed Mathematical Teaching, Modern Latin Teaching, Experiments in Self-Government, Co-education and Dual Systems, Intelligence Tests, Domestic Subjects, and Commercial Education.

THE disappearance of Mr. Fisher from the official political firmament has been as meteoric as his appearance in December, 1916, as Minister of Education.

If we were to seek an astronomical parallel for his work in that office, we should point to a more important luminary. During his period of office, especially the earlier years, the educational field basked in a bright and warm sunshine which promoted growth and ripened abundant fruit. None of Mr. Fisher's pre-

decessors, with the possible exception of Mr. W. E. Forster, has a better legislative and administrative record. He has abolished the half-timer, established the principle of the continuation school, improved the salaries and pensions of teachers and raised the status and dignity of the profession, repaired some of the ravages of the war by granting higher education to 27,000 service-men, developed to a high degree of efficiency the medical inspection of school children, and encouraged and assisted university education. It has been urged, somewhat acrimoniously at times, that Mr. Fisher battled feebly against the Frankenstein monster of economy which threatened to destroy many of his educational reforms. We are bound to admit that we have not always been in accord with Mr. Fisher's more recent policy. But an impartial audit of the account reveals a substantial addition to the spiritual assets of the nation through his work as Minister of Education, and we should be churlish indeed if we failed to express in these columns our recognition and gratitude.

Le roi est mort : vive le roi ! Mr. Fisher's successor at the Board of Education is Mr. E. F. L. Wood, the eldest son of Lord Halifax, a comparatively young man of good educational descent and antecedents. Under present political and financial conditions, it would be foolish to suppose that the rate of educational progress of the last six years will be maintained. But we may at least expect that the new ground which has been so hardly won will be consolidated and strengthened to withstand the attacks of reactionaries. As a war veteran, and a cavalry officer to boot, Mr. Wood will be familiar with the process known in the army as "mopping up." Every previous period of active educational legislation has been followed by necessary work of this nature. The problem of the single-school area, salaries, pensions, and tenure of teachers, the development of our university system, are a few only of the questions which will offer scope for useful and unostentatious work. It will be agreed also that the relations between the central and local authorities must be placed on a firmer basis of co-operation and mutual understanding. Although "tranquillity" may be the political *mot d'ordre*, the new Minister of Education will, we hope, interpret his instructions from the Government in a liberal sense.

AN anonymous writer in the *Yorkshire Post*, taking as his text the protest of Prof. Smithell against the regimentation of education, has set forth a catalogue of woes calculated to extract tears from the ignorant and perhaps smiles from the initiated. It is not that there is no truth in the article; the thing that matters is the rather absurd exaggeration. According to the writer, "staff meetings" are dull and futile, time spent in preparing schemes of work is wasted, marks are intended for the solace of misguided parents, and teachers are unable to attend to their true business of teaching, and he assumes that all this is done by direct order of circular and mandate, blue-book and regulation. As a matter of fact, most of the above is really a condemnation of the teacher. Staff meetings are not obliged to be held, nor need they be dull or futile; schemes of work need not be elabor-

The
Regimentation
of Education.

ate, but no school could be satisfactorily run without them; and marking can be abolished where any school decides that the game is not worth the candle.

THEN we get a description of "Jones Minor," who votes English Literature dull stuff, labels mathematics stodge, and learns to love nothing. We would venture to state that Jones Minor almost invariably loves something, and that, as a rule, if mathematics is stodge to him, then English Literature or "stinks" will probably be exercising a compelling attraction. "In course of time Jones Minor, having entirely submerged, if not destroyed his individuality"—is that really an accurate description of Jones Minor? Is the British boy, despite all the defects of his character or that of his teacher, left with his individuality submerged if not destroyed? We have known some hundreds of these Jones Minors, and they always struck us as shedding their burdens and preserving their individuality with great ease and celerity. "All his time has been given to sucking up with sponge-like avidity a sea of information." Jones, we venture to assert, does not suck up information like a sponge unless he is in love with his subject: if, according to the writer, he learns to love nothing, we may reckon that the sponge is dry. We recognize, in this rather foolishly highly coloured picture of educational inefficiency, certain gleams of truth; but the picture is full of crude tints, bad design and faulty perspective; the writer would be better engaged in painting the picture of how things should be or in helping the schools to paint that picture for themselves. When we showed it to one Jones Minor he was overcome with amusement at the caricature of his sunny laughter-loving self. If it be a true presentation of the teacher, then we shall have to join that section of the public that regards our educational expenditure as completely wasteful and extravagant, and we are not yet prepared to do that.

BUSINESS men are often severe critics of the school, and sometimes, at least, they forget the limitations of the adolescent mind and expect the teacher to develop in the pupil greater wisdom and maturity of outlook than are attainable in youth. But no profession can afford to neglect intelligent outside criticism, and teachers will listen with respect to the opinions expressed by Sir Charles Macara in his speech at Lancaster Grammar School on October 18th. Sir Charles's impression is that "the youth of to-day is not so well grounded and provided with such solid foundations upon which to build as were the youth of a generation or two ago." "They are being encouraged," he says, "to make meals of confectionery instead of plain wholesome fare. The result is mental indigestion instead of stamina." Modern efforts after variety and interest have made the school far more attractive than it used to be. Where the new methods encourage mental activity, the change is all to the good. Where, like so many modern amusements, they give entertainment that leaves the mind passive, they are educationally harmful. Sir Charles Macara's own early education, at a small Scottish school, was based upon a good grounding in "the three R's," elocution, and the classics. He is satisfied that it has been of immense

service to him in life. In organizing the cotton trade of the world there was need for public speaking, and the lessons in elocution justified themselves. What he owes to the classics he does not explain, but doubtless it is the power of logical thinking and exact expression.

THE Report of the Departmental Committee on the teaching of English was published over a year ago; but, though its influence has already been widely felt, no attempt has yet been made on anything approaching national lines to apply its main thesis, *i.e.* that the teaching of English should constitute the basis of all education. We congratulate the London County Council, however, upon having taken one step in the right direction, for, on November 2 last, that body called a conference, obviously with the hope of focussing attention upon the matter. The Council had already taken action towards that end; indeed, it has before it various recommendations from its Consultative Committee, one of which deals with the subject in relation to the training course for the elementary school teachers certificate. The conference itself was attended by over a thousand teachers who heard an extremely interesting address by Sir Henry Newbolt, chairman of the Departmental Committee. The other speakers at the meeting included Mr. J. W. Samuel, Sir Gregory Foster, Prof. Chambers, Dr. Brock, and Mr. J. Dover Wilson. The points discussed were diverse enough to satisfy the most catholic tastes, for they ranged from a somewhat trite disquisition on the functions of the parts of speech to the rival claims of Anglo-Saxon and Medieval Latin and French to a place in honours courses at universities.

THAT English should be the basis of all education is, in one sense, almost a truism; to make it so, in actual practice, would need a revolution in the schools.

English—the Basis of Education.

Education is, ordinarily, a matter of evolution, not revolution: of steady development, not of sudden change. Before English can be the basic subject which enthusiasts desire to see it, much remains to be done, particularly with reference both to scope and method—even granting that the Departmental Committee's Report has gone far to define aim. Experts themselves, for example, cannot yet agree as to the part that grammar, pure or otherwise, should play in the teaching of the subject: a *via media* must be reached. Mechanical methods of formal grammar teaching, based to a considerable extent upon those obtaining in the teaching of classics, and admittedly out of place in the study of English, have been followed by a reaction which has, in some cases, led to the dropping of the teaching of grammar almost entirely. Again, there has been, up to now, little or no co-ordination either of aim, scope, or method between primary, secondary, and university teachers. Such co-ordination must be an accomplished fact on lines embodying a consensus of opinion before English can fairly claim to be made a common basis upon which all other subjects may be founded. It is on the solving of these problems that authorities, such as the London County Council, and teachers, the latter acting through their professional associations, might well join forces.

THE Society for Pure English does a good work in directing attention to some of the disfigurements the language suffers from those who seek to disguise the commonplaceness of their ideas by employing some slight novelty or violence of expression. "Grammatical inversion," i.e. the placing of the subject after the verb or after the auxiliary of the verb, without any adequate reason for departure from the normal order, is pilloried in Tract No. X by Mr. H. W. Fowler, joint author of "The King's English," as "among the most repellent vices of modern writing." Here are a couple of the examples he gives: Hard *would it* be to decide which of his many pursuits he found most absorbing (for "It would be hard"). With good peripheral railways, such as *have our invaders*, the front can be strengthened at any point (for "our invaders have"). Mr. Fowler carefully classifies the types of sentence in which inversion is legitimately used—interrogative, imperative, exclamatory, and hypothetical, balance, link, signpost, negative, and metrical. The illegitimate extension, besides its intrinsic ugliness, destroys the effect of the legitimate uses. The two examples cited above, and many others that the reader will notice when once his attention has been directed to the matter, can plead no useful purpose. Teachers might profitably divert some of the energy which they spend on eradicating the "split infinitive" to the fight against this new corruption of speech.

**Grammatical
Inversion.**

A MEMORANDUM of considerable interest and value containing a general statement on the Grant System and Educational Expenditure and a summary of facts and suggestions arising out of the general statement has been prepared by Mr. Spurley Hey. The pamphlet is a mine of information about education finance and the legislation affecting it. It shows the steps by which the unsatisfactory system, in existence before 1919, of paying grants mainly in respect of either individual pupils or individual subjects has been changed into the existing system of a lump sum for Elementary Education and a further lump sum for Higher Education, based mainly upon approved expenditure, and in each case amounting to not less than 50 per cent of the approved net expenditure. Mr. Spurley Hey's main conclusions, with which we are in general agreement, are that the percentage grant system has provided a stimulus to local authorities without promoting extravagance, and has set up a fairer partnership in educational development as regards both interest and finance. He sounds no very uncertain note about the interference of the Board of Education in matters of purely local administrative practice and procedure and gives illustrations, which would be amusing, if they were not so stupid, of such interference in connexion with the provision of school meals and the treatment of children in school clinics.

**Education
Finance and
Government
Grants.**

MR. SPURLEY HEY recognizes that as our expenditure has now reached a sum of seventy-five millions there must be some form of control of aggregate expenditure, and that this control will be ineffective without the power of veto. He therefore suggests that, under present conditions, there might reasonably be some form of grant limitation,

**"Limited" Grants
and "Easier"
Control.**

subject to such limitation being attached to the existing grant system, the present educational facilities being maintained in efficiency and some provision being made for gradual development. There should be, on the other hand, a clear and definite statement of the principles upon which "limited" grants are to be distributed to the individual Education Authorities and a relaxation of the present tendency of the Board of Education to exercise detailed control over the administration of the Local Education Authority. It is of vital interest to the nation that the educational system of the country should be not merely maintained in efficiency but provided with reasonable means of development, and we welcome the memorandum as providing a mass of general information bearing upon these matters.

BY the time these lines appear in print the country will have elected a new government. At the moment "equal opportunities for all in Education"

**A Pioneer
Movement in
Leeds.**

is the cry of one party at least, but in the matter of education Leeds is waiting for no party, for the movement embodied in the Music and Drama League, which is claimed to be the first of its kind in the country, is likely to exert a far-reaching influence in spreading culture among the young people of the city, and is one which will doubtless have many imitators if it meets with the success it deserves. It is in a spirit of co-operation that the schools of the city have adopted a scheme organized by one of the Leeds Education Authorities Inspectors, Capt. F. E. Harrison, to give periodical concert and dramatic performances. For the purposes of the League, the schools of the city have been arranged in groups. Periodically, at one school or another in each group, concerts and miniature dramatic performances are to be held, each of the schools concerned contributing one or more items. Then the pick of these programmes will be selected for presentation before an audience of the public from time to time. The Schools Music and Drama League has the active support of Sir Michael Sadler, Mr. Leslie Owen, the chairman of the Education Committee, and Mr. James Graham, Director of Education; furthermore, it has the promise of active help in coaching, the lending of stage scenery, &c., from the Leeds Repertory Season Committee, the Art Theatre, and the William Sheffield Dramatic Society. This "break away" from some of the bad old methods of education will be followed with keen interest, and a report as to how the scheme really works in practice will be eagerly awaited.

"THE Health of the School Child"—the official title under which the Report of the Chief Medical Officer of the Board of Education for last year is issued—indicates the fundamental importance which is now attached to the health of the child in relation to its education.

**Good Health
the Basis of
Education.**

The underlying sentiment is but a variant of the homely saying that no amount of manipulation can make a good job out of inferior material. And it is time, ere it be too late, that the nation recognized that the quality and value of its future citizens must always be very largely determined by the adequate nutrition of its young and adolescent children living under good hygienic conditions. Every one, we believe,

will approve the statement that "No nation can afford to neglect its normal children, which are its principal consideration; nor should it neglect the blind, the deaf, the cripples, the tuberculous, or the mentally deficient." For obvious reasons, it could not do so with impunity. Further, "The school environment or the means of education should not be such as are likely to exert unfavourable or injurious influences upon the health, growth, or development of the child." On the whole the note of the year under review is one of progress and improvement.

**Improvements
Foreshadowed.**

THERE are gaps yet to be filled, areas not yet fully or satisfactorily covered—e.g. the prevention, detection, and proper treatment of dental caries—a prime factor in predisposition to all forms of illness, and in itself a really serious disease; in some cases schools are over-crowded, and an extension of activities is needed in others; and the need of better and more systematic co-ordination appears elsewhere. Antenatal deaths have somewhat decreased, but are still far too common. A wider education of the expectant mother and improved sanitary surroundings are called for: though real and permanent improvement in these respects can be achieved on a large scale only when based on the habits and the wisdom almost unconsciously acquired by the child during its school age. But, after all, we hark back to adequate nutrition as the physical basis of successful education. And one cannot avoid an uneasy feeling that in relation to the question of milk supplies, "economy" is too often used as an inept term, wrested into a complete negation of its original and rightful meaning. Nothing can take the place of milk as nourishment for children; to restrict its supply to an amount less than that which is necessary is to commit a blunder equally absurd and costly on a gigantic scale.

**The Medical
Profession and
Psycho-
Analysis.**

CONSIDERABLE discussion and correspondence in the daily press has followed the joint discussion on psycho-analysis at the Hull meeting of the British Association last September. Quite recently Sir Clifford Allbutt has come forward, in his opening address to St. George's Hospital Medical School, to declare that psycho-analysis is no science at all, and to reiterate the statement (already officially contradicted) that "it is now proposed that any teacher should be allowed to probe into the minds of children and adolescents, too often with dirty tools." Lord Dawson, too, in his presidential address to the Medical Society of London, has echoed these warnings, although, it is true, in a more generous and less wholesale fashion. Certainly, if there have been any proposals that unqualified teachers (and for that matter unqualified physicians) should undertake to psycho-analyse school children, it is the duty of medical men, educationists, and psychologists, to register a united protest; undoubtedly the protests of the psycho-analysts themselves would be the most emphatic and the most complete. But it is a different thing to condemn out of hand a new branch of psychology, which has now been sympathetically recognized and critically discussed by almost every British psychologist of academic standing—Dr. Myers at London, Dr. Brown at Oxford, the late Dr. Rivers at Cambridge, Prof.

Pear at Manchester, Prof. Valentine at Birmingham, and Dr. Drever at Edinburgh.

**Temperament
and
Character.**

AS so eminent an educationist as Dr. Kimmins pointed out at Hull, the Montessori method, the Dalton plan, and the general movement for individual work and study, receive from psycho-analytic doctrines a valuable theoretical support in their common tendency to reduce repression to a minimum and to substitute internal discipline for external. Innumerable cases, too, have now been recorded in which children with delinquent and neurotic tendencies have been referred by teachers to competent psychologists and have been cured, or at least temporarily relieved, of their dangerous tendencies. The chief message, however, which the "new psychology" has for the practical teacher consists, not so much in the technical methods employed or in the individual results obtained, but rather in the fresh light and the reawakened interest which the less extravagant conclusions of psycho-analysis has given to the whole subject of temperament and character and their scientific study and training.

**The Vœu de
Genève.**

THE third Congress of the International Moral Education League was held at Geneva in July and August last. It was attended by a large, amiable, and extremely cosmopolitan gathering. Some five hundred delegates representing some thirty distinct peoples were enrolled on the list of membership. One of the most prominent subjects of discussion was the need of "a purer method of history-teaching" than that which prevails generally throughout the modern world. Speakers from Japan, China, India, Poland, Germany, Spain, and England concurred in deploring the present-day perversion of history to the fostering of national vanity and international hate. They agreed in advocating what they call the "Vœu de Genève" on the subject. This pious desire is that history shall be purged from its perverting patriotisms, shall be cleansed from its moral stains, and shall be employed as a means for inculcating ethical idealism, international amity, and brotherly love. There are probably few teachers or students of history who will not share the wish that their subject may be freed from all intrusive elements which mar its perfection as a pure science. There are, however, certainly very many who will feel considerable anxiety lest the International Moral Education League in its noble zeal to eliminate old passions and prejudices, may not insensibly introduce its own obvious bias towards secularism and cosmopolitanism. It is possible, that unless this tendency is held in check, the last state of our history text-books may be worse than the first.

**Latin in
Secondary
Schools.**

THE pamphlet by Mr. J. W. Mackail advocating Latin being taught as an essential subject in all secondary schools is a temperate statement of the case, and should arouse no antagonism among the advocates of science or of modern studies. He does not mention even the parallel case in France, where the standard of writing French sank when Latin was no longer a compulsory subject for the *Baccalauriat*. Nor does he quote the opinion of many of those who

have to deal with young men after they leave school : that those who have been grounded in Latin learn a fresh subject quicker than those who have not, nor that captains of industry prefer apprentices from classical schools. But Mr. Mackail does show how Latin is now a privilege of the richer classes, and asks how long the ranks of Labour will allow this distinction. A great deal of flabbiness and haziness would disappear if modern education were tuned up in the cold light of the classics where a statement is either right or wrong. Certainly there should be no secondary school where a pupil could not learn Latin if he so desired. Mr. Mackail meets all the usual objections against Latin with moderate arguments : that it is a dead language, a hall-mark of a social class, insufficiency of teachers, that boys do not wish to learn it, that they do not keep it up, and that the time table is already overcrowded. This last excuse is the feeblest, for all teachers are agreed that it is better to learn a few subjects well than have a smattering of many. The time table becomes over-crowded only when head masters are over-persuaded to add new subjects by ill-informed parents or give way themselves to unwise enthusiasms. If Latin is not taught in secondary schools, pupils will enter a university without taking it. Then those among them who wish for an Arts degree find they have to begin this subject after sixteen when the drudgery inherent in all beginnings is much harder to surmount. Whatever their personal opinions may be, all teachers should read Mr. Mackail's few pages ; they are written by a ripe scholar, and one who knows much of teaching.

THE educational pamphlet on Print-Script recently issued by the Board of Education, will be welcomed by a large body of teachers. Although the evidence quoted is predominately favourable to the new form of handwriting, the arguments for and against are stated with admirable impartiality. The very remarkable success which has attended the introduction of print-script into schools, its increasing popularity, and the rapid spread of the movement to other countries, will have a marked effect on the handwriting of the future. Emphasis is very properly laid on the inadvisability of bringing pressure to bear on schools to introduce print-script, for unless the teachers are strongly in favour of the change from cursive writing, any movement in this direction is doomed to failure. One of the greatest obstacles to its general introduction into schools will be removed by the statements made with regard to the favourable attitude of employers towards the new form of handwriting. The principal advantages claimed for print-script are : (1) Its greater legibility. (2) The ease of acquirement. (3) The removal of the difficulty of the dissimilarity of written and printed matter, with, as a consequence, a considerable improvement in spelling, and (4) An increased speed in writing. With regard to the last point, which from the employers' point of view is of the greatest importance, the only evidence quoted against increased speed is that based on tests of a small number of children, whereas the evidence on the other side is based on a careful investigation with speed tests on 13,000 children, the results of which were quite conclusive as to the superiority of print-script in this respect.

THE Labour Party's Advisory Committee on Education has considered the question of the education and training of teachers, and the results are now before us in the form of a sixpenny pamphlet.

**Education and
Training of
Teachers : The
"Labour" View.**

The proposals are comprehensive, and in some senses they go to the root of the matter. We have no quarrel with them because in certain respects they represent ideals which are at present quite unattainable. On the contrary, we think it extremely important to know the goal for which we are striving, so that whatever changes are made shall at any rate be in the right direction. But we doubt whether even the Labour Party are fully aware of the remoteness of their proposals from actual facts. To take only one instance, they desire that, as soon as may be, all training of teachers shall be included in the functions of universities. Have they sufficiently considered, however, that a large proportion of the teachers to be trained are concerned with children of tender years, and that the universities have a long way to travel before they could feel competent to undertake the guidance of such training? Again, have they sufficiently considered that, if all teachers are to be trained at universities, either the number of universities must be increased, or the existing universities must become swamped with intending teachers of various grades? Since 1890, when university training departments were started, the universities have exerted an immense and a beneficent influence upon the training of teachers, and we suggest that ways and means might be found of extending that influence still further, without imposing upon the universities a burden which even their broad shoulders might find it impossible to bear.

**THE TEACHING AND PROBLEMS OF HISTORY
IN ENGLISH SECONDARY SCHOOLS.***

BY CLOUDESLEY BRERETON, M.A. (CANTAB.), B. ÈS L.
(PARIS).

THE study of History in English secondary schools has undergone considerable extension during the last thirty years, especially in the smaller grammar schools and large municipal and country schools. History specialists have been freely appointed, and the Historical Association, which has come into being during the period, has exercised a strong centripetal influence in attracting and bringing together those interested in the subject, and an almost equally potent centrifugal one in diffusing specialist knowledge among members by means of its admirable series of pamphlets and monographs. The scope of school history has also been greatly enlarged ; English history has been supplemented on the one hand by a far fuller treatment of colonial History and reinforced on the other by a considerable admixture of European History. The criticism, "What do they know of England who only England know?" is no longer applicable. At the same time the need of some general knowledge of earlier epochs has been recognized and some notions of ancient history, Egyptian, Grecian, and the like figure in the time-tables of most schools. Similarly the study or at least consultation of original sources has been introduced in the shape of contemporaneous authors and documents, while the aid of pictures and illustrations has likewise been enlisted. A considerable amount of attention has also been paid in some districts to local history.

* Paper read at the third International Congress on Moral Education, Geneva, August 1922.

notably in London, combined with organized visits to local museums and monuments, which are of especial value for English children whose imagination nearly always starts from the concrete. In various schools again, the organic connexion with geography, economics, or sociology, is more or less stressed and emphasized. In fact, the chief danger to-day seems to be that the teaching may become too diffuse, though this is largely guarded against by the external examinations whose requirements dominate the situation.

The historical initiation of the younger pupils is made as a rule through the study of famous men and women. In some schools history is studied, concentrically, in others the lineal method of successive periods is followed. Generally speaking a far greater amount of time is devoted to recent and modern times than was in the past; the Great War especially gave a strong impetus to this concentration on modern political movements, and adequate time for this has been provided by the establishment of advanced courses in modern studies, for pupils from sixteen to eighteen, in which history often takes the most prominent part.

If the modern pupil has a less accurate knowledge of actual dates, his historical sense is often cultivated by the compilation of time-charts. Furthermore in a few schools an adoption of the Dalton plan for free study, which seems peculiarly suitable to the study of history, has led to a wide extension of independent reading by the pupils, while practically everywhere the private reading of good historical romances and novels has been found an excellent means for giving atmosphere and reality to the subject as a whole. Literature again, in the lower classes to a certain extent, and still more fully in the higher ones, is co-ordinated with History. In fact in many of the advanced courses this correlation between culture and politics has become very real.

The present-day teacher of history may well feel a glow of satisfaction when he compares these multifarious and many-sided developments of his subjects with the pemmican-like history of the past often studied in a single text-book that bristled with dates and genealogical tables, and in which battles and sieges occupied often a disproportionate amount of space. But any excessive complacency on his part is likely, I think, to evaporate in view of two of the gravest possible problems—one national and the other international which are every day coming clearer into sight. Broadly speaking the outlook of our historians in domestic matters has been mainly aristocratic and middle-class, and in international matters nationalistic and even chauvinist. This is no special English phenomenon, it is common more or less to all other nations. And the reasons are simple. Hitherto the only articulate classes have been the aristocracy and the bourgeoisie, while the ever-increasing growth of national sentiment to which the religious Reformation of the sixteenth century by its destruction of the central ideal of Christendom gave an immense impetus, has made the historians in all countries the exponents of the national point of view rather than of the European, and still less of the Universal.

Moreover, as long as we had practically only two parties in England, Whig and Tory, we had broadly speaking, only Whig and Tory historians. During the greater part of the last century it was the Whig historians who held the field. With the gradual awakening, however, to self-consciousness of the British Empire, the pendulum has swung the other way. But Whig and Tory historians alike are threatened by the emergence of a new set of factors. These are briefly the establishment of practically universal suffrage, the consequent rise of a separate labour party, and above all the growth and development of universal, free, and compulsory education. In my own humble opinion, it is only a matter of time as to when the masses through their new leaders will demand a certain re-writing

of national history, including a re-teaching of history in the schools themselves. When that day arrives our schools will be faced with a history difficulty, beside which the former so-called religious difficulty will pale in insignificance.

Again it seems to me equally probable that with the growing sense of solidarity between the proletariats of the various European countries a similar demand will be formulated for a restatement of the international aspect of foreign questions, even when treated primarily from the English standpoint.

How then can we best prepare the way for dealing with this two-fold crisis before it becomes acute?

I will deal first with the internal aspect.

I think we must begin by modifying our general attitude towards history and instead of explicitly or implicitly regarding it in the main as a sort of static and stratified relation of past events in which the temporary success of those who made it is looked on as the sole criterion of the rights and wrongs of the questions at issue. We should rather point out that it is a record of a series of incessant struggles between various parties representing various principles, each of whom had at least *some right* on its side, and indicate to our pupils that if *victrix causa deis placuit* there was as often as not a Cato on the beaten side, and that further, not infrequently a cause which has been decried and beaten in one century, has been subsequently triumphant. In a word that great issues never die, though from age to age they need re-statement, since history is really past Politics, whose main problems are still with us to-day.

But this does not mean we should represent history, as generally written, to be a conventional fiction, much less, as some one has said, as an organized lie, but rather as truth up to date, but truth capable of perpetual revision and re-statement, as indeed our own English Law is, in which decisions stand, until they are reversed by subsequent decisions embodying more fully the Spirit of the age. We shall thus avoid the Charybdis of dogmatism and the Scylla of scepticism, while cultivating as far as possible the judgment of our pupils, which, as Montaigne long ago pointed out, is the chief value of historical study.

It should therefore be our duty to set before our pupils as impartially as possible the rights and wrongs of each side, and leave them free to manifest their preferences. Such preferences are possible even with the younger pupils in such apparently broad issues as the struggles between King Charles and his Parliament, while a deeper study of the same struggle will have all the advantage of revealing to them its terrible complexity and may end by making their choice as difficult and dolorous as that of a Falkland.

By thus cultivating in our pupils a sense of respect for the convictions of the beaten side, even if they disagree with their tenets, we shall undermine that cocksureness and bigotry that is the bane of current politics, and promote in them a deeper sense of the complexity of existing issues, and a real tolerance for the opinions of others, which is the half-way house towards that respect for those who differ from us, which again is the cornerstone of that loyal co-operation for which all the world is yearning to-day.

And the same procedure seems applicable for the solution of the international problem. In place of the spirit "of my country right or wrong," they should be taught, not as the pacifists are inclined to put it, that their country is always wrong, but that at times it makes its mistakes and sins against its neighbour, like any simple individual. Again, the deeper they study, the more they will realize the difficulties of the contending nations, and while not shutting their eyes to the deceit and chicanery of secret diplomacy, they will still be able to do justice to the substantial sincerity of the majority of the protagonists in the struggle, and understand their immense

difficulties, and in place of sweeping and shallow condemnation ultimately perceive the deep human drama and tragedy of it all.

And here again we can begin even with the younger pupils. Thus when discussing the Hundred Years War with France we should not only state the claims of Edward the Third, but also give the French point of view, and say a word or two on the terrible set-back inflicted thereby on Western European civilization.

It has long been held by the teachers of modern languages that one of their chief duties, and certainly their highest, is to inculcate in their pupils a knowledge and a respect of the people whose language they are studying, that they should regard themselves in fact as the *proxenes* and unpaid consuls of those peoples—in a way as a sort of *diplomatie scolaire*. Has not the time arrived when our historians might well copy their example of abandoning their position of national apologists à l'outrance, which can only lead in the long run to the accumulating of national misunderstandings and hatreds, adopt the nobler task of "re-righting" history with a view of explaining the nations to one another. National our schools must remain, but they need not act as breeding-places of future wars. America has given us here a lead and a lesson, first by revising its anti-English text-books after the Cuban War, and again after the Great War.

But it may be asked, from what history are our pupils to study international events, at least those in an advanced course? Surely the most satisfactory method would be to study a foreign work alongside of one of our own countrymen, for there is no satisfactory international history that I know of. Perhaps the League of Nations might undertake its compilation. But I fear we shall have to wait for a World University such as Benchara Branford has outlined in his masterly book "Janus and Vesta" before we shall get a really satisfactory World History.

National History rightly understood has always been regarded as the Bible of the people for which it has been written, being at once a record of its triumphs and failures and an oracle full of promises and warnings to its statesmen. Under the new dispensation it should still remain the national *sortes Virgilianae* for consultation and counsel. But in place of an Old Testament in which each nation is depicted by its writers as the chosen people and the rest as Gentiles or Barbarians, or rather over and above and supplementary to it, there should be a New Testament which, without abolishing the Old and preserving in fact all that is best in it, will preach the doctrines of peace, goodwill, and fraternity on the earth.

CHRISTMAS BOOKS, 1922.

THE steady stream of Christmas books is upon us again, and welcomed alike by old and young. The taste for children's literature lasts with most of us when even that for plum pudding and the pantomime has departed. But the standard must be high now to satisfy not only that exacting person the modern child, but the ever watchful elders who, in the capacity of Child-Students or Psychologists, or as mere humble parents, talk with an ever increasing emphasis about the importance of what is read in early years.

Classics are always safe guides to follow, and so it is with the classics of the nursery, the wise old wholesome tales of which "Beauty and the Beast" is the most pathetic, and "Cinderella" the best beloved; let those who write for the little children remember the primary rules of story telling that have made those figures immortal. The old favourites come out again this year in many different forms, nowhere better seen than in the handsome scarlet and gold of Flora Annie Steel's "English Fairy Tales," illustrated by Arthur Rackham. There is a twin

volume to it in "The Water Babies," illustrated by Goble, which would rejoice the heart of any child. For the adventurous children who would explore new ground, there are many fresh fairy tales, "The Chinese Fairy Book," "The Swedish Fairy Book," which savours somewhat of Hans Andersen, and one little new fairy story called "Elizabeth Ann's Delight," so pretty that it is likely to prove the delight of many others besides Elizabeth; the pictures look as if they ought to belong to one of Mrs. Ewing's stories; the little book can go fearlessly on to the most exclusive nursery shelves.

In the matter of illustration those who cater for little children at the present time cannot be too careful; let them fully understand their public. For instance, would any parent who loves a child have anywhere near its nursery a book containing such alarming pictures as that in "Lazy Matilda and other Tales," of the child who for dawdling on errands was transformed into a monstrosity with caterpillar legs? And in the same book of rhymed tales, there are pictures, likely to terrify nervous children, of the misshapen condition into which an unlucky youth developed because he was too fond of sweets. These pictures are too suggestive for the child of to-day, often nervous and over-imaginative, and suffering still, in many cases, from the effects of air-raids and the war.

Let the small children's books before all else be wholesome, not odd, or "cranky;" and when they suggest, let the suggestions be beautiful ones. Children of all ages will love the quaint "History of Dr. Dolittle," who was the despair of his sister Susan because he filled his house so full of animals that there was no room for the patients: it was very awkward when the lady with the rheumatism sat down on the hedgehog that the doctor would allow to sleep on the sofa! So at last Dr. Dolittle was left with no patients at all but the catsmeat man, who was so used to animals of all sorts that he did not mind them anywhere.

We are glad to notice plenty of Nursery Rhymes; there is an ever increasing value set on them for children by all educational authorities. When we see the mass of books for boys and girls of school age, it seems that there should be no difficulty in satisfying the demand so universal at the present time, "What can I give the children to read in the holidays?" But it is not so easy as it seems, partly because parents and children do not always see eye to eye in this matter of holiday reading. For the boys, there pours out year by year a steady stream of school stories and adventures. Truly "Tom Brown" has had numerous descendants, but one feels at times that very little remains of his original mantle. There was "The Bending of a Twig," and there was "Dick," and year by year one lives in hope! The "Harley First XV," by Hylton Cleaver, is a good set of short stories of school life, and there are endless pleasant chronicles of football and cricket matches, and some good tales of exciting life overseas. The weighty volume of "The Scout" will keep many a youth quiet for hours, especially if he has a thoroughly solid table on which to deposit it while he reads.

Looking at the books for girls, one is almost at first inclined to think one has made a mistake and taken up a fresh lot for boys. More school tales, more matches, this time generally either hockey or lacrosse, and the monitors, captains of games, and school officials seem to have strayed across from the one set of books to the other. This is confusing, and it is also arresting. For the boys it is perhaps natural, this absorption in the school world; for that world is to a great extent the only world of most English boys of a certain age. But in the case of our daughters do we want the same thing to happen? If so, we are doing our best to bring it about by the books we provide for them to-day. These numerous and quite harmless tales, piled before us in a perfect stack, tales of school matches, of dormitory reforms, of good and bad monitresses, of petty school politics, surely they appeal

only to one part of a girl's nature. We all know the reasons for keeping growing girls busy with out-door life and healthy amusements, but we know too that a girl develops far younger than a boy; and surely while her brother is contentedly conning the pages of the latest school story, she will be ready for something a good deal nearer to true literature? It seems that there should be something more for girls than we find provided; something that will appeal to and bring out the higher qualities latent in every maiden of what we call the school age. There is a beautiful new edition of "Don Quixote" before us, from Messrs. Constable; let anyone who can afford a guinea try if the humorously pathetic adventures of one who has given an adjective to our language do not still hold his audience, as they did when some of us were growing girls.

Should there not be more stories of home life, such as Miss Yonge made so popular forty years ago? Among all these books for girls very few deal with home as anything but a place to which to return for the holidays; of course, there *are* such books, but the proportion is small. One such may be noted, "Home Service," by a well-proved author, Ascot Hope, who needs no words of ours to recommend him. The story is one of family life in the difficult war years, and some of the scenes come home to all Londoners; especially will they grieve for the Teddy Bear, who was left out in the perambulator under the laurel bush during an air-raid, with sorry results. No consolation was possible for his bereaved master but the exciting one of giving Teddy "a proper funeral;" this the children carry out conscientiously, setting up over the grave "as a temporary monument, the handle of the smashed perambulator." The only disappointment was that as it was Sunday, a military salute from a toy cannon was forbidden; "so only the bells ringing to service made Teddy's requiem." Another charming story of home life, "The Happy Adventurers," by Lady Middleton, tells of the dream meetings and friendships of children of different generations; perhaps its yellow cover is a shade too bright for the size of the volume, but that is a matter of taste.

Those who live among children know what an important factor in forming their taste and training their judgment is the choice of books for the holidays, and they are proportionately grateful when they come upon something which gives real help. Each year usually produces one or two such noticeable books, books that will live, that we all read and remember, and whose characters become historic. It is the business of those who care for children to watch the great flow of Christmas books, and to see that these treasures, in however humble a guise they appear, do not pass unheeded. The importance of a really great Child's Book can hardly be overestimated, but it is not always recognized at once. Mrs. Ewing's "Jackanapes," when it first appeared in book form was stitched up in a paper cover, and sold for a shilling.

For the children who love animal tales, and never tire of "Black Beauty," and "The Romance of the Red Deer," there is an attractive volume called, "Romances of the Wild," with fine illustrations, and the pictures in the "Stories from the Early World" are real works of art.

There are too many books published at present for children; of that no one can doubt who tries to make a selection among them. And yet there is still a need for more. We want more good home stories for our daughters, and we want more good historical romances that will appeal equally to boys and girls. History is taught best at that age through its romantic side, and a great power possessed by the industrious Miss Yonge, of Victorian fame, was that of inspiring her readers with a love of the historical period she described. She was also invariably accurate, and she got the characters alike of her great men and her rogues with a vivid touch surpassed by few women. Many among the middle-aged to-day owe their knowledge of Simon de Montfort and John of Bedford, of Henry of

Navarre and Henry V, not to any lessons they ever had upon such persons, but to those green and gold volumes, "The Prince and the Page," "The Caged Lion," and "The Chaplet of Pearls," that were prized by an earlier generation as no story seems quite to be prized to-day.

LIST OF GIFT-BOOKS FOR CHILDREN, AGES 6 TO 11 YEARS.

- The Water-Babies: A Fairy Story for a Land-Baby. By Charles Kingsley. New Edition. (Macmillan. 7s. 6d. net.)

GROUP TESTS OF INTELLIGENCE.

By E. I. NEWCOMB, M.A. (Columbia and Trinity College, Dublin), (late Assistant to Dr. Thorndike at Teachers' College, Columbia University, New York).

TESTING is a fascinating occupation. The taste for it grows with indulgence in it. It seems to satisfy an inborn craving, a form perhaps of the instinct of curiosity which is part of the mental make-up of robins, goats, cows, and most babies. Children tease animals, and one another, "to see what they will do," *i.e.* they test them. Most boys enjoy messing about with test-tubes. Dr. Ballard revels in hurling "absurdities" at all the school children he can get at, to test their intelligence. One is tempted to compose analogies after the manner of Mr. Burt and his American imitators:

boy is to test-tube as teacher is to ——— ?
teasing is to child as testing is to ——— ?

Moreover the testing process is satisfying not only to the tester, but also to the tested (or should it be "testee" ?). Not that school children, or any one else love examinations of the old type. Some do, the abnormalities at the far end of the normal curve of distribution. But a Binet test, given by a skilled and sympathetic psychologist, may win him the lasting affection of the child tested; and conundrums and anagrams and the host of mental puzzles that go by the name of pencil-and-paper games are enjoyed by every normal boy and girl. The present writer gave Mr. Cyril Burt's Reasoning Tests to a few twelve-year-olds in a public elementary school in New York, and found them extremely popular with both boys and girls. One little chap said: "I do like these questions; they sharpen my wits." It is hard to imagine a normal boy who would not enjoy most of the intelligence tests given in Dr. Ballard's latest book*. To take a few examples:

Explain the absurdity in the following:

There is a tree in America which is so tall that it takes two men and a boy to see the top.

An Irishman called one day at the post office and asked if there was a letter waiting for him. "What is your name?" asked the postmaster. "Sure," said the man, "you will find my name on the envelope."

Choose the best reason.

They let children travel by rail at half price because:

- (a) They never injure the carriages.
- (b) They take up less room.
- (c) They are dear little things.
- (d) They don't earn any money.

Common Sense.

If all bloaters are herrings, are all herrings bloaters?

How many great-grandmothers have you (never mind their being dead)?

Obedying Orders.

If Liverpool is in Scotland, write the word "Dublin"; but if it is in England, write the word "Scotland."

Write the last letter of the word in this extraordinary sentence that has more than twelve letters.

If, then, intelligence tests are so satisfying to man's original nature, why does the mere mention of them produce an unfavourable reaction in nine people out of ten? Frosty politeness alternates with unconcealed irritation. "The latest American fad, I believe." "Very useful, no doubt, for nations like America or Germany, but hardly congenial to English ideas." "What? The things that are said to prove that intelligence stops growing at sixteen? I'm sure that *mine* didn't." "If only these people would tell us what they *mean* by intelligence!" A recent correspondent of the *Daily News* is indignant with the "quackery" of the tests, because they take no account of the physical state of the child or of his "repressions"! One feels that this writer has come perilously near to

revealing his own repressions, and indeed all these reactions suggest typical complexes.

Dr. Ballard's book offers sane replies and explanations to opponents of the testing movement. The exclusive Britisher will find that he need not use American tests at all. There are home-made varieties in plenty, and the book tells where they can be procured. They are not even very new; one school has used them for nine years, and its record is worth quoting. "In a dreary quarter of a great city there stands one of the biggest elementary schools in England. To the girls' department a new head mistress was appointed in 1913. For the previous decade not a single scholarship had been gained at the school. The new head teacher had faith in mental tests, and classified her school according to the intelligence of the pupils. She had three currents of promotion, the speed of the current being determined by the intelligence quotient of the girls. The result was that during the next nine years as many as thirty-three scholarships were gained—scholarships that testify to at least two qualities on the part of the winners: natural intelligence and school attainments. Under the old classification the intelligence was there, but not the opportunity; the new classification brought the opportunity as well."

In an excellent chapter on the "Limits of Intelligence" Dr. Ballard brings so much evidence to bear upon this disputed point, and grants so much to his opponents, that a fair-minded reader is almost bound to agree with his thesis, that normally intelligence ceases to grow beyond the middle of the teens. He readily grants that the bulk of a man's knowledge and culture and taste is acquired later, and does not wholly reject Dr. Garnett's doctrine that voluntary attention is of the very essence of intelligence, and that this can be cultivated throughout life by daily strenuous discipline. But he sums up the facts as follows: "We may state generally that the growth of intelligence, which is rapid for the first few years, gradually slows down as the child gets older, that after twelve years of age the slowing-down is very marked, and that after sixteen further growth is inappreciable."

In the previous chapter entitled "What is Intelligence?" Dr. Ballard quotes the answers of many eminent men to this question. The simplest definitions as those of three English writers: "general ability," "inborn all-round mental efficiency," "applied thought." His own definition is too complicated to be happy: "Intelligence is the relative general efficiency of minds measured under similar conditions of knowledge, interest, and habituation." It is comforting to know that it does not very much matter whether we quite understand what intelligence is. The tests certainly measure *something*, and one day we shall know more accurately what it is. "There is nothing new in the idea of measuring a thing first and finding out what it is afterwards. We do not yet know what electricity is, but we are so sure that it can be measured that we pay our electric light bill without a protest."

Statisticians will like this book for its amazingly lucid explanation of Correlation and Probable Error. Teachers will revel in the multitude of tests and "stunts" which they can try out on their pupils. Perhaps the most useful part of all is the first paragraph of the preface, with its concise statement of the function of mental tests:

There is an old proverb which says that an ounce of mother wit is worth a pound of clergy, "wit" being the old English word for intelligence, and "clergy" the old English word for learning. And examiners have always been under the reproach of being unable to separate the wit from the clergy; they cannot tell us how much of a candidate's success at an examination is due to good brains and how much is due to good opportunities. It is the business of mental tests to extract the element of wit from the compound of wit and clergy. That they do their work imperfectly is readily admitted; but they are doing it better every day; and so important is the task that it is better to do it badly than not to do it at all.

* "Group Tests of Intelligence," by P. B. Ballard. Hodder & Stoughton. 6s. net.

Healthy Books for BOYS AND GIRLS.

Complete List post free.

Special List of Historical Tales, post free.

THE KING OF THE SNAKES.

And other Folk-Lore Stories from Uganda. By MRS. GEORGE BASKERVILLE. With Four Illustrations, 2s.

[An African Counterpart to "The Jungle Book." No one can read this charming book without forming a completely new conception of the imaginative powers of the African mind.]

40-44 HOLBORN VIADUCT, LONDON, E.C.1.

PERSONAL PARAGRAPHS.

A WELCOME feature in the list of Dissolution Honours is the conferment of a knighthood upon Dr. Walford Davies, Chairman of the National Council of Music in Wales, and Professor of Music in the University College of Aberystwyth, in recognition of the conspicuous work he has done for music in Wales during the last few years. Dr. Richard Runciman Terry, Organist and Director of Music, Westminster Cathedral since 1901, is also honoured with a knighthood for his notable research work in early English manuscripts in music. Literature is represented in the list by the inclusion of the names of Sir Hall Caine and Sir E. Vincent Evans, who become Companions of Honour, and a tribute is paid to medicine in the C.B.E. (Order of the British Empire) conferred on Dr. Harvey Hilliard.

THREE teacher candidates have been successful in the recent elections, Mr. A. A. Somerville, Mr. C. W. Crook, and Mr. D. M. Cowan. Secondary school teachers throughout England and Wales will welcome especially the election of Mr. Somerville, senior master and head of the Army Class at Eton College. Mr. Somerville has been for many years a prominent and popular member of the Incorporated Association of Assistant Masters in Secondary Schools, and has held the office of Chairman to the Association for three periods. He is a member of the Teachers' Registration Council, and possesses an intimate knowledge of education and the profession. Mr. C. W. Crook is a past president of the National Union of Teachers, head master of the Wood Green Central Secondary School, and a Senator of the University of London. Both Mr. Somerville and Mr. Crook intend to resign their scholastic appointments and devote themselves to Parliamentary duties. Mr. D. M. Cowan was formerly head master of North Kelvinside Higher Grade School, Glasgow, and he has represented the Scottish Universities in the House since 1918. The defeat of Major E. Gray at Accrington is a serious loss. He always obtained a good hearing when he spoke, and was regarded as representing the teachers' point of view with authority and reason.

DEEP regret is expressed throughout the teaching profession at the resignation of Sir Michael Sadler from his office as Chairman of the Teachers' Registration Council owing to an increasing pressure of work. He has held office since 1915, and during that time the number of teachers on the register has risen from 5,000 to about 75,000. Sir Michael Sadler possesses an intimate world knowledge of education, and this combined with his broad outlook and democratic spirit made him an ideal chairman. His services to the Council have been invaluable, and an appreciation of his work, inscribed on vellum, has been presented to him at a luncheon given in his honour by the members of the Council.

PROF. JOHN M. MANLY, Professor and Head of the Department of English in the University of Chicago, and General Editor of "Modern Philology" has been elected to succeed Prof. W. P. Ker as President of the Modern Humanities Research Association for the year 1922-3.

MANY generations of Old Etonians throughout the Empire will hear with regret of the death of Mrs. Warre, widow of the late Dr. Edmund Warre, formerly Head Master and afterwards Provost of Eton, in her eighty-third year. She was a grandchild of Sir Charles Wair Malet, who had a distinguished career in the East India Company. Her marriage to Dr. Warre was the fourth wedding which had taken place between members of the Malet and Warre families during a period of five hundred years.

DR. TERRY THOMAS of Haileybury College, is to succeed the Rev. I. E. Wynne-Edwards as head master of Leeds Grammar School. Dr. Thomas, who is only thirty years of age, has been head of the military and engineering side at Haileybury since 1915. He went to St. John's College, Cambridge, from Cardiff University, and obtained First Class Honours Nat. Science Tripos, Second Class, Part I Maths. Tripos, and Third Class Part II Law Tripos. He is also a B.Sc. of London and Wales.

MR. CHARLES HENRY ASHDOWN, who died on October 16th last, was for many years a member of the staff of St. Albans Grammar School, and the author of many works of antiquarian interest. He wrote the libretti and lyrics of the St. Albans, Hertford and Westcliff historical pageants, and only recently completed a history of the Worshipful Company of Glaziers of the City of London. An authority on medieval fortresses and armour, and on antiquarian subjects generally, he was an official lecturer of the Selborne Society, and for many years Hon. Secretary of the Hertfordshire Architectural and Archaeological Society.

PROF. F. SODDY and Dr. F. W. Aston have brought welcome distinction to the Universities of Oxford and Cambridge respectively, in obtaining the Nobel Prizes for Chemistry. Dr. Soddy is awarded the 1921 prize for his contribution to the knowledge of chemistry of radioactive elements, and his researches into isotopes. Dr. Aston, who is Research Fellow of Trinity College, Cambridge, receives the 1922 prize mainly in recognition of his analysis of chemical elements by means of the "mass-spectrograph."

MR. J. W. LEWIS has been appointed an assistant inspector of schools in the Welsh Department by the President of the Board of Education. Mr. Lewis, who is a Welsh-speaking Welshman, obtained his degree of B.Sc. at the University of Wales. Until recently he was senior mathematical master at Tottenham Grammar School, and previously he saw service in schools in Wales.

THE Delegates of the Oxford University Press have appointed Mr. Kenneth Sisam, B.Litt., to the post of Junior Assistant Secretary. Mr. Sisam matriculated at Merton College in 1910, as a Rhodes Scholar from New Zealand. He took the degree of Bachelor of Letters in 1915, whilst acting as assistant to the late Prof. Napier. Precluded by ill health from active service in the war, he served under the Ministry of Food, and was quickly promoted to the important and onerous post of Director of Bacon Contracts. He has recently edited an anthology of "Fourteenth-Century Prose and Verse" in the Oxford series, edited by Mr. D. Nichol Smith.

MR. C. S. GARLAND, who headed the poll in the Parliamentary election at South Islington, is a chemical engineer by profession, and an associate of the Royal College of Science.

ONLOOKER.

LOCAL EDUCATION AUTHORITIES.

The Elementary Education Committee reported to a recent meeting of the Committee that they had interviewed deputations from the National Union of Women Teachers and the London Teachers' Association, urging them to recommend the Council to reconsider their decision to employ as an experiment 100 Infants' Assistants for children under the compulsory school age. Resolutions and numerous communications from different bodies were reported. The North St. Pancras Liberal and Radical Association deplores the intention of the London County Council to introduce imperfectly trained persons into the schools for the teaching of the younger infants, regarding such a step

England	Montenegro	Turkey
Finland and The Tundra	*Morocco	Wales
Florence	Newfoundland	World's Children
France	New York	
	New Zealand	

Those marked * may be had in French.

PEEPS AT NATURE.

Each volume containing full-page illustrations in colour and in black and white.

Bird Life of the Seasons	British Moths
British Beetles	Natural History of the Garden
British Butterflies	The Naturalist at the Sea-Shore
British Ferns, Club-Mosses, and Horsetails	Pond-Life
British Land Mammals	Reptiles and Amphibians
Wild Flowers and their Wonderful Ways	Romances of the Rocks

Complete list of the "PEEPS" SERIES, including PEEPS AT HISTORY (11 volumes), PEEPS AT GREAT RAILWAYS (5 volumes), PEEPS AT INDUSTRIES (4 volumes), and MISCELLANEOUS PEEPS (9 volumes), will be sent post free on application to the publishers.

ELEMENTARY WATER-COLOUR PAINTING.

A HOME AND SCHOOL COURSE IN THE PRACTICE AND ART OF ELEMENTARY WATER-COLOUR LANDSCAPE PAINTING.

By J. HULLAH BROWN.

Containing 6 full page illustrations in colour, including guides for gradation of colour, colour washes, mixing of colours, &c.; also including 3 separately printed large size outline pencil drawings of the landscape subject depicted in colour in the book. In strong paper portfolio.

Price 2s. 6d.

Pre-eminently practical in its method, this book leads the student by the shortest possible route to the production of a finished water-colour sketch.

The book deals systematically and practically with the properties of colour; with primary, secondary, and tertiary colouring; with the mixing of pigments; the elementary technique of water-colour landscape painting; the preparation of the preliminary drawing; selecting a subject and reducing it to the immediate requirements of the student, and finally with the treatment of the subject as a whole.

Further copies of the large size outline pencil drawing may be had in packets of 3, at 6d. per packet.

W. HEFFER & SONS, LTD., CAMBRIDGE

And from all Booksellers.

as: (i.) a shabby and indefensible device to undercut salaries; (ii.) an injustice to trained and qualified students who are unemployed; and above all as (iii.) a serious wrong to the children, at the beginning of their lives, a wrong which in many cases must be irreparable. A motion to recommend the Council not to act further upon the resolution authorizing the employment of Infant Assistants was lost.

The Councils' grant to aided Secondary Schools for 1922-3 amounts to £325,535 compared with £353,864 in the previous session. The difference is due partly to the reduction in the teaching staff

but mainly to the increase in average annual tuition fees for all pupils which came into force at the beginning of the year. Under the regulations of the Board of Education, a sum of approximately £14,000 will be deducted from the Council's deficiency grant in respect of maintenance grants paid to Secondary Schools. The Education Committee points out, however, that the Board's total contribution in aid of the schools, having regard to the substantive grants which are paid direct, will be not less than 50 per cent of the total contributions from public funds.

Discussing Lord Chelmsford's recommendations for the future administration of the Choice of Employment Act, 1919, to give effect to which the legislation will be required, the Education Committee

is unable to recommend the Council to exercise their full powers. On the other hand, it is strongly of opinion that the work should not be handed over to the Ministry of Labour and they think that so far as London is concerned, there is every reason why the present arrangement should be retained. The present arrangement is to rely upon the machinery and workers instituted for the general work of the Child Welfare and After-Care. It is pointed out that effective after-care work is admittedly difficult, but more than ever necessary as continued day-time education is at present impracticable. The present revised scheme was launched during the war and has survived seven very difficult years. It has established the usefulness of the after-care conference, and has failed to cover the ground completely in supervision work only from want of workers. If the staffing difficulties which it is understood the Ministry of Labour are experiencing on account of the uncertainty at present prevailing can be overcome, experience shows that this scheme can be worked successfully. The introduction of a new and untried system at this juncture would be peculiarly unfortunate, when so much in different directions is being asked of those upholding the system of voluntary service. The Education Committee has decided to ask the Board of Education to exempt London from the operation of their decisions.

The Warwickshire Education Committee states that during the last few months School Attendance Officers have undertaken the collection of fees due for operative treatment of enlarged tonsils and adenoids. It is found that this work not only takes up a great deal of the time of the Officers, but also owing to disputes tends to weaken their position in dealing with parents. Out of 366 cases they were, in spite of great efforts, only able to collect the fees in 73 cases and the Committee believe that it will be very difficult for any one to do better. It is proposed that in future the fees should be paid before the operation and that where the parent declines to pay the fee the Committee should not undertake remedial treatment.

Referring to their decisions earlier in the year to terminate the appointment of as many married women as could be dispensed with, the Education Committee of the Staffordshire County Council states that notice has been given to 69 married women with the result that there are now no unmarried teachers belonging to the county who are out of employment. All married women teachers have been informed that this policy will be continued as circumstances require.

For determining which children attending public elementary and other schools in the area are qualified by attainment for admission to Secondary Schools, the Plymouth Education Committee has adopted a well considered scheme. Two examinations are held: a preliminary test for all children who fulfil the age conditions and have reached a reasonable standard of proficiency in the elementary school and a final qualifying examination. For the preliminary test 3,422 pupils were presented and 1,664 passed. In the final examination 708 pupils were successful. The number of pupils actually entering the Secondary Schools was 612, 511 free scholars and 101 fee-paying.

THE "MODERN OUTLOOK" GEOGRAPHIES.

By W. H. BARKER, B.Sc., F.R.G.S.

In stiff board covers, 2s. 6d. each net.

140 pages. Size, 6 in. deep by 7½ in. wide.

Book 1.—**THE BRITISH ISLES.** A descriptive Geography based on a regional study.

.. 2.—**THE WORLD.** A descriptive Geography based on the great vegetation regions.

OTHERS IN COURSE OF PREPARATION.

The "Modern Outlook" Geographies are designed to form a graded series of books for Scholars from the age of nine. The aim in each case has been to give in simple narrative and in a readable form the broad geographical principles which the average scholar of that particular age may reasonably be expected to follow.

The plan of these books will suggest to the teacher methods of treatment for oral lessons, and to the scholars they will be invaluable as readers to follow the class work.

The books are fully illustrated with maps and pictures.

"Can be recommended without reserve."—*The Schoolmistress.*

"These books will be welcomed in Schools. . . . The story of these islands is simply told, with many good maps and illustrations from photographs."—*The Times Educational Supplement.*

An essential preliminary to the study of a single region.

"THE WONDERBOOK" GEOGRAPHIES

By E. G. R. TAYLOR, B.Sc.

In stiff board covers, 3/- each net.

Size, 8½ in. deep by 6½ in. wide.

Vol. 1. **FROM MOUNTAIN TO SEA.** 148 pages.

Vol. 2. **IN YONDER LANDS.** 154 pages.

Foundation volumes introducing geographical concepts and principles through stories that compel attention.

"We most unreservedly commend these volumes."—*The Civilian.*

"The books should prove a popular addition to form libraries."—*The Journal of Education.*

Published by "GEOGRAPHIA" LTD., 55 Fleet Street, E.C. 4.

PAINTING AND "NATURE" STUDIES.

500 British and Foreign Birds and Small mammals, carefully stuffed by expert taxidermist and mounted on stands for painting studies. Thousands of tropical butterflies mounted in neat glazed cases (glass both sides), giving a fine range in colour and design. Selections on approval. Cases of British butterflies, moths, or beetles, illustrating the most beautiful species, tropical shells, &c. British Lepidoptera, list of 700 species with English names, British Coleoptera, 2,000 species (200,000).

About 300 volumes of books on Natural History. Particulars from

A. FORD, Naturalist, 36 IRVING ROAD, BOURNEMOUTH

VOICE TRAINING FOR TEACHERS.

A Special Course of

TEN CORRESPONDENCE LESSONS

(under the name of the "Simplex" System) covering the whole range of Voice Production. Interesting, concise, and easy to follow.

DAME CLARA BUTT writes: "I advise all would-be Singers and all interested in the Teaching of Singing to take the 'Simplex' Course. They will find it most helpful."

DUSTLESS AND HYGIENIC SCHOOLS

On all
School, Laboratory, Library, &c., Floors and Linoleums of every description

USE

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

(British owned)

EARLY in the CHRISTMAS VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the ROYAL SANITARY INSTITUTE,

and is strongly recommended by Medical and other expert authorities.

It costs little, saves labour, and is easily applied by the unskilled. Not sticky—the ordinary daily dry sweeping alone required.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only during each sweeping (without sprinkling of any kind), but also throughout all the intervening periods — which is even of greater hygienic importance.

"FLORIGENE" has been continuously used for many years on the floors of The Royal Naval Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies.

Send for Medical Reports, and Testimonials to the Sole Manufacturers—

THE **"DUST-ALLAYER"** CO.

4 Vernon Place, Bloomsbury Square, London, W.C. 1.

SELECTED EDUCATIONAL BOOKS

PUBLISHED AT THE

University Tutorial Press.

BOTANY AND NATURE STUDY.

TEXT-BOOK OF BOTANY. By J. M. LOWSON, M.A., B.Sc., F.L.S. Sixth Edition, Revised and Enlarged. 9s. 6d.

The standard is that usually required for University Intermediate Examinations. The chief aims are simplicity and clearness of statement as regards both facts and principles.

PRACTICAL BOTANY. By FRANCIS CAVERS, D.Sc. Second Edition. 6s. 6d.

In addition to the ordinary practical work this book also contains experiments on the Physiology of Plants and their response to external stimuli, and on the Chemistry of Plant Substances.

LIFE HISTORIES OF COMMON PLANTS. By FRANCIS CAVERS, D.Sc., late Lecturer in Biology at Goldsmiths' College. 4s. 6d.

The greater portion of the work is devoted to detailed instructions for the study, by observation and experiment, of typical plants.

THE AIMS AND METHODS OF NATURE STUDY: A Guide for Teachers. By JOHN RENNIE, D.Sc., F.R.S.E., Lecturer in Natural History in the University of Aberdeen. With an Introduction by Professor J. ARTHUR THOMSON. 5s.

SCHOOL LESSONS IN PLANT AND ANIMAL LIFE. By JOHN RENNIE, D.Sc., F.R.S.E. 6s. 6d.

The aim of the book is to help Teachers of Nature Study. It supplies a course of over eighty lessons in Nature Study, with full guidance as to how to learn and how to teach the subject.

SCHOOL GARDENING, WITH A GUIDE TO HORTICULTURE. By ALBERT HOSKING, Lecturer in Horticulture and Chief Supervisor of School Gardens, West of Scotland Agricultural College. With numerous illustrations and plans. 4s.

This book affords teachers sound guidance in the correct methods of teaching this subject and of organizing the classes.

HISTORY AND GEOGRAPHY.

ECONOMIC HISTORY OF ENGLAND. By MILTON BRIGGS, M.A., B.Sc., F.R.Econ.S. 8s. 6d.

An elementary account of the economic development of England down to the present day.

A SOCIAL HISTORY OF ENGLAND. By FREDERICK BRADSHAW, D.Sc., M.A., Lecturer in History at Armstrong College, Newcastle-on-Tyne. Second Edition. 6s.

An elementary account for colleges and upper forms in schools of the social and economic development of England.

GROUNDWORK OF ENGLISH HISTORY. By M. E. CARTER, Honour School of Modern History, Oxford. 4s.

An attempt to present the salient facts of English History in a readable but definite form unencumbered with irrelevant details.

A HISTORY OF THE BRITISH COLONIES. By H. L. JONES, B.A., and C. SHERRATT, B.A. 3s. 6d.

Supplies a short account of the history and present government of the British Commonwealth of Nations including the territories added by the recent treaties.

MAIN LANDMARKS OF EUROPEAN HISTORY. From 31 B.C. to modern times. By F. N. DIXON, B.A. Second Edition. 8s.

The object of the book is to trace in outline the successive steps of the process which has evolved the Europe of to-day from the Europe of 31 B.C.

TEXT-BOOK OF GEOGRAPHY. By G. C. FRY, M.Sc. Fourth Edition, Revised to 1921 and Enlarged. 6s. 6d.

Stress is laid on the interconnection of Physical Geography and Political Geography. The present issue indicates territorial changes due to the war.

EDUCATION.

PRINCIPLES AND METHODS OF TEACHING. By JAMES WELTON, D. Lit., M.A., late Professor of Education in the University of Leeds. Second Edition, Revised and Enlarged. 8s. 6d.

In this work the treatment is theoretical in the sense of setting forth a consistent body of doctrine. But that the principles and methods here set forth are practical has been proved by the successful working of every one of them in school.

TEACHING: ITS NATURE AND VARIETIES. By BENJAMIN DUMVILLE, M.A., F.C.P., late Master of Method and Lecturer on Education in the Islington Day Training College. 6s. 6d.

An analysis of the processes of teaching as they occur in all subjects. The author examines the nature of the teaching itself, showing why certain methods should be employed.

PRINCIPLES AND METHODS OF MORAL TRAINING, WITH SPECIAL REFERENCE TO SCHOOL DISCIPLINE. By JAMES WELTON, D. Lit., M.A., and F. G. BLANDFORD, M.A., Lecturer in Education in the Cambridge University Training College. 5s.

This work treats of the general nature of good character—duty, virtue, conscience; of the school as a moral community in which good character is developed, &c.

PRINCIPLES AND METHODS OF PHYSICAL EDUCATION AND HYGIENE. By W. P. WELTON, B.Sc., Master of Method in the University of Leeds. With a Sketch of the History of Physical Education by JAMES WELTON, D. Lit., M.A. 6s. 6d.

TEXT-BOOK OF HYGIENE FOR TEACHERS. By R. A. LYSTER, M.D., B.Sc., D.P.H., Medical Officer of Health for Hampshire and Chief Medical Officer to the Education Committee. 6s. 6d.

For Teachers in Training and for the Teachers' Certificate.

MATHEMATICS AND SCIENCE.

A FIRST COURSE IN MATHEMATICS FOR TECHNICAL STUDENTS. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. Second Edition. 3s.

An easy course of Practical Mathematics, including Arithmetic, Mensuration, and Algebra, suitable for use in Evening Continuation Schools and Preliminary Technical Classes.

A SECOND COURSE IN MATHEMATICS FOR TECHNICAL STUDENTS. By the same Authors. 6s.

In this book the scheme of the authors' "First Course in Mathematics for Technical Students" has been extended to provide, in all, a three years' course in the subject.

GENERAL ELEMENTARY SCIENCE. Edited by Wm. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. Fourth Edition. 5s. KEY, 2s. 3d.

Provides a simple and instructive course of Elementary Science, containing the rudiments of Mechanics, Physics, and Chemistry.

A FIRST COURSE IN ENGINEERING SCIENCE. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., Second Edition. 4s.

Includes the elements of Applied Mechanics and Heat.

A SECOND COURSE IN ENGINEERING SCIENCE. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc. 5s.

This book embodies a course of study which is intended to follow that laid down in the authors' "First Course in Engineering Science."

FIRST STAGE HEAT ENGINES. By J. W. HAYWARD, M.Sc. 4s.

In addition to mentioning the usual demonstrations of the rules given, several experiments are suggested which can be carried out with home-made apparatus.

Complete Catalogue of Educational Books post free on application.

SUPPLEMENTARY AIDS TO CLASSROOM WORK

XII.

RELIGIOUS KNOWLEDGE.

By CANON G. H. BOX, D.D., Professor of Hebrew and Old Testament Exegesis, King's College, London.

IT is widely felt at the present time by an increasingly large number of teachers, that the whole question of the religious instruction given in the schools needs reconsideration. It is recognized that drastic changes are required, both in method and scope, if a system which shall be in harmony with modern knowledge and modern points of view is to be attained. Unreality here is utterly fatal, and any system of instruction which is out of touch with the life and outlook of the modern world, which fails to grip the interest and intelligence of the children, is thereby condemned. And yet the failure of the old system is palpable.

This fact was brought home vividly to the present writer when, some few months ago, it fell to his lot to take a class of non-theological students at King's College, drawn from the faculties of arts, science, medicine, and engineering, and numbering about 120 men between the ages of twenty and twenty-five, in a course of instruction in the Old Testament. The course consisted of a weekly lecture for two terms, and aimed at presenting the Old Testament as a record of progressive revelation, developing from the crude beginnings, and culminating in the work of the great prophetic teachers of Israel. The history was presented as reflecting the divine discipline of the race, as illustrated more particularly in the history of Israel. The results of modern criticism were stated not negatively so much as constructively, and full stress was laid on

the prophetic religion as the heart of the Old Testament, and as the real preparation for the work of Christ.

Apparently this point of view was entirely novel to the great majority of those who attended the course, and obviously enlisted their deep interest. One student remarked at the conclusion that the Old Testament had hitherto possessed for him no meaning—it had failed to touch or influence any living interest; he had not exactly rejected it, but it had ceased to count in his scheme of values. Now, however, it wore a different aspect. In the light of the new way of presenting the facts its development became full of interest. The record of progressive revelation became, in fact, a fascinating history of the Divine education of the race through Israel, leading on to the climax presented in the Gospels and the inauguration of the new order of things in the foundation of the Christian Church.

Now it is obvious that these men were suffering from the effects of a system—or lack of system—in religious instruction, which had failed in the most vital point; it had been entirely impotent to enlist the interest or appeal to the intelligence of those who were supposed to benefit from it. The peril of such a state of things is obvious, and has been widely recognized. Many teachers, including some occupying very important positions, are fully alive to the necessity of drastic changes, and efforts are being made, as will be pointed out below, to effect real improvement. But the problem is vast, and the arrears to be overtaken are enormous. A solution can only be reached through the elementary schools, though, of course, much important, and indeed invaluable and indispensable, work can be accomplished elsewhere. In the discussion that follows it will, perhaps, be convenient if we consider the question under the following heads: (a) The teaching of the Bible as the basis of religious instruction; (b) The equipment of the Teacher; and (c) The question of the curriculum. The subject of "supplementary aids" can best be distributed in the remarks that are made under these separate headings.

(a) THE TEACHING OF THE BIBLE AS THE BASIS OF RELIGIOUS INSTRUCTION.

Religious instruction is a means to an end; its aim is, or should be, the discipline and the building up of character. If it is regarded as exclusively concerned with the imparting of knowledge—the setting forth of mere facts about history, geography, custom, and so on—it will miss what ought to be its main purpose and function. On the other hand, if it succeeds in its main purpose, as it will succeed in the hands of the right kind of teacher with the proper equipment, its influence will radiate all through the school-life; it will create an atmosphere which will be palpable in all the activities of the school, and will make its presence unmistakably felt in numberless ways.

Where possible it is very desirable that the purely religious instruction should be supplemented by (or should include) simple prayers and hymns, and it will be found a real help if, in addition, some study of modern missionary work can be attempted. The literature available for this purpose is both popular and abundant, and, if properly used, can be made an invaluable means of stimulating the interest of the children, and of illustrating the power of "applied" religion. In Church schools all these aids can be used together with the definite instruction based upon the Book of Common Prayer, and especially the Catechism.

But, after all, the fundamental basis of all religious instruction in English schools of all types is, and must remain, the English Bible. The elements of worship just referred to are enshrined in the pages of the Bible itself. In the Psalter we have the noblest of all Prayer and Hymn-Books—the great liturgical collection which was created by, and reflects the piety of, the post-exilic Jewish Church. And within the Bible, also, are to be found some of the

most thrilling stories of missionary work. It is an enormous advantage to have as a text-book, which is practically available and accessible to every man, woman, and child who can read, such a noble monument of English as our English Bible. But the book needs to be interpreted, if its religious and moral value is to be made clear and cogent. And it is just here that the problem of intelligent teaching is so urgent.

A few general remarks on the scope of such teaching will, perhaps, make evident what should be aimed at. The general objective can, at least, be made clear. The purpose that should govern the scheme of Bible teaching should be to lead up to some intelligent apprehension of the prophetic literature as the culmination of the Old Testament, and the direct preparation for the Gospel in the New Testament. The study of the Bible on these lines ought not to be attempted till the child has some sense of what is meant by history and development. This means that a graduated course indicating the progressive character of the revelation ought not to be attempted with children under the age of nine or ten years. Before this age attention should be mainly concentrated upon the New Testament—the Gospel stories and Teaching of Christ. A certain amount of attention could, of course, be given, even in this stage, to some Old Testament elements. Some of the Old Testament stories could be taught with advantage, only great care should be taken in the selection. For instance, the story of creation should not be taught, in the present writer's opinion, till the child can understand the difference between a purely historical narrative, and a story thrown into narrative form in order to clothe an idea—in other words between a fact and a symbol. Perhaps the best method for introducing a child to the knowledge of such a distinction will be through the teaching of the New Testament parables, though it must be remembered that many of the Parables are transcripts from actual life, and depict incidents which might easily be "historical" in the strict sense of the term.

Such a course as is contemplated for older children, between the ages, say, of ten and fourteen, would include a certain amount of history, both in Old and New Testament, but this should be taught in such a way as to illustrate the religious development. The emphasis should be laid on the latter.

In the case of the Old Testament the history should begin at the true beginning—the birth of the Israelitish nation, *i.e.* the Exodus. The salient points should be dwelt upon—the Exodus, the career of Moses, the conquest of Canaan, a general view of the period of unorganized national life under the "Judges," the Philistine oppression, the birth of the monarchy (Saul and David), the disruption under Solomon, a general view of the Northern Kingdom (with a glance at the reigns of Ahab and Jeroboam II), the last days of the Northern Kingdom down to the Fall of Samaria. In this connexion the rise of the prophetic movement should be dwelt upon ("Is Saul also among the prophets?"), the career of Elijah, and the advent of Amos and Hosea, with some simple lessons about their teaching.

The history could be continued, in the case of the Southern Kingdom, attention being rather fully directed to the eighth century and the rise of the Assyrian power. This might well be illustrated from Assyrian monuments, and so form a background for illuminating the career and teaching not only of Amos and Hosea, but also of Isaiah and Micah. The history of the seventh century brings us to the heathen reaction under Manasseh, the reign of Josiah, the Deuteronomic Reform (621 B.C.), the career of Jeremiah, and the last days of the Judean State culminating in the Fall of Jerusalem (586 B.C.). Then follows the exile, the activity of Ezekiel the prophet of reconstruction, the work of the "Great Unknown" prophet who wrote Isaiah xl-lv., the so-called "Return"

(Haggai and Zechariah), the gradual reconstruction of the Jewish State in Palestine (Temple and community), the work of Nehemiah and Ezra, the codification of the Law in its final form, the Samaritan schism, the dawn of the Greek period (Alexander the Great), and later the Macbean crisis.

But all this should merely serve to bring out the significance and content of the Prophetic Teaching, and the achievements of the post-exilic Jewish Church. An invaluable aid for teachers in this connexion is Dr. Hamilton's great book "The People of God"* (1912). The supreme merit of this work is that it brings out clearly the importance of the prophetic teaching, and shows how it culminated in the New Testament. The course of instruction here suggested might include, in its last year, some introduction to such matters as the documentary theory of the composition of the Pentateuch, the Canon and formation of the Bible, synoptic criticism in outline, and a sketch of the period "between the Testaments" (an excellent outline under this title is published by A. and C. Black at rs. by Grant), which would be invaluable for linking up the Old Testament with the New.

But the Bible is also a collection of great literature—it enshrines some of the greatest literature of the world, judged purely as literature. In our noble English version it has become interwoven with the finest products of our own national literature. Even the poems of a Swinburne are saturated with Biblical phraseology. The Bible has, indeed, become a sort of people's book, and is one of the most potent instruments of popular culture. As such it might well be used as a text-book for literature lessons (outside the Religious Instruction hour) as recommended in the Report on "The Teaching of English." This would be a "supplementary aid" of the highest possible value. For such a purpose the various books of Dr. Richard G. Moulton will be found invaluable, and especially his "Modern Reader's Bible"† for schools, which ought to be in the hands of every head-teacher. For the New Testament such books as Sanday's "Outlines of the Life of Christ," or Stalker's "Life of Christ" and "Life of St. Paul," as well as the excellent commentaries that exist in abundance, may be suggested.

(b) THE EQUIPMENT OF THE TEACHER.

What has been sketched in outline above suggests the question, "What equipment is required for the teacher?" It is obvious that everything depends, and must depend, upon a supply of keen and well-equipped teachers being available. It is very desirable that teachers should be stimulated to take up a definite course of study, planned on modern lines, which would make them familiar, to some extent, with the rich and varied achievements of modern Biblical scholarship. It will open up a new and fascinating world—a world full of new discoveries in archaeology and literature, equivalent to nothing less than the re-discovery and reconstruction of a vanished past. It is notorious that many teachers are not particularly interested in the Religious Teaching side of school instruction. The subject seems to them to be dull and unreal—it is out of any vital connexion with life, and the everyday problems of life. This is the nemesis that has overtaken a system which is antiquated and outgrown. It is certain that these teachers are as deeply interested as other people in moral questions and problems; it is the system of teaching that is wrong, and unless the teaching of the Bible can be rescued from the paralysing effects of the dead hand of the past this drift into apathy and indifference is bound to spread and produce even worse results.

The teachers who realize what is wrong—and they are growing in numbers—will be anxious to equip themselves with the new knowledge. By doing so they will render

inestimable service to the cause of true education, and to their own best interests. One of the best methods is the organization of vacation schools. These have already been tried with excellent results, on a small scale. Some years ago a school of this sort for teachers, primarily, who were engaged in elementary school teaching, was held, several years in succession, at Claydon in Bucks. The teachers assembled after Easter, and stayed in the village for about a fortnight. A series of lectures was arranged, and the services of distinguished scholars were enlisted in the work. A real impetus was given to those who attended, the interest and enthusiasm aroused by the course being unmistakable. A vacation term for Biblical study is also regularly organized every year, and is still going on, which is held alternately in the Summer Vacation at Oxford and Cambridge. It is designed primarily for ladies—though a few men occasionally attend. It is largely attended by teachers, especially those engaged in secondary schools, and has justified itself by continued and well-merited success. Here, too, lectures have been regularly given by distinguished scholars on Biblical and religious subjects.* It may be remarked, in passing, that the subject of religious instruction has been dealt with in girls' schools of the secondary and high-school type much more efficiently and boldly than, perhaps, in any other type of school. Headmistresses have in several cases appointed assistants to the staff who have had the advantage of a thorough training in Divinity, some of them holding the London degree (B.D.), others the Lambeth Diploma, others again with both qualifications. With an expert of this kind on the staff the whole system of religious instruction can be placed upon a proper basis.

But it is the mass of teachers, who cannot be expected to qualify in this special way, but whose interest in religious instruction is very real, with whom the hope of real reform lies. It is quite possible for them to equip themselves with some valuable knowledge by private study. There is an abundance of popular handbooks. Here are a few practical suggestions. Let a beginning be made with such a book as Martin's "The Meaning of the Old Testament" (Student's Christian Movement, S.C.M., 2s. 6d.). Then let the history and religious development be studied in Ottley's two books, "The History of the Hebrews" and "The Religion of Israel" (Cambridge Press). Next let Ottley's little book on "The Hebrew Prophets" (Oxford Church Text-Book Series, Rivingtons, 2s. 6d.) be read, and G. A. Smith's two volumes on "The Book of the Twelve Prophets" (Hodder and Stoughton), and lastly Robertson Smith's "The Prophets of Israel." Such a course would be an excellent introduction to the subject, which might be followed up by Nairne's two delightful volumes "The Faith of the Old Testament" and "The Faith of the New Testament." For the New Testament, besides Stalker's books already referred to, Glover's "The Jesus of History" (S.C.M.) is invaluable. A good Dictionary of the Bible, such as Hastings's one volume Dictionary of the Bible (T. and T. Clark) would be an enormous help.

Finally it may be suggested that some good maps of Palestine and the Ancient East in the classroom would assist both teachers and pupils. The help of the Palestine Exploration Fund (Office, 2 Hinde Street, London, W.) might be appealed to, in this connexion, as also for Lantern Lectures on the Holy Land, which they can sometimes arrange. All teachers would find G. A. Smith's "Historical Geography of the Holy Land" (Hodder & Stoughton) of great interest and value.

(c) THE QUESTION OF THE CURRICULUM.

I fear I have left very little space for the discussion of this difficult problem. I must confine myself to calling attention to some excellent syllabuses, of a comprehensive character, which have recently been produced. These

* 'Oxford Press' :—The conclusions are stated more briefly in a smaller work by the same author 'Discovery and Revelation.'
† 2 Vols. (Macmillan).

* In this connexion attention may be called to the admirable work that is being done by the 'Church Tutorial Classes' (Secretary, Rev. S. Fort, The Rectory, Macaulay Road, Clapham Common, London, S.W.)

syllabuses are primarily concerned with religious instruction in elementary schools. A very interesting and valuable syllabus, recently issued in a new edition, is the "Winchester Syllabus of Religious Instruction" (published by Warren and Co., Winchester, 1s. 2d. post free). This is intended for use in Church schools, and contains some excellent suggestions on such subjects as Prayers in School (with forms), the use of Hymns (with detailed lists), and memorizing. It includes a carefully graduated course of instruction for the whole school life, and carefully selected lists of books. Another remarkably good syllabus (for Church schools) is that adopted in the Manchester Diocese. This is printed as an Appendix to a valuable book on "The Child's Knowledge of God," by the Rev. T. Grigg-Smith (Macmillan, 7s. 6d.). This is full of good things, which we have no room to discuss here. But attention may be called to the suggestions about Infants' Classes.

The use of pictures is strongly urged for such classes (Nelson's Wall Pictures are recommended). In this connexion we should like to call attention to a sumptuous volume, well suited for this purpose, entitled "The Friend of Little Children" (the story of Christ's life told for children), by J. Sinclair Stevenson. This volume, which is rather expensive (21s., published by Basil Blackwell, Oxford), is beautifully illustrated with twelve coloured prints by Hole, and a large number of drawings. Carey Bonner's "Child Songs" is also recommended, and for expression work, "Models and how to make them" (Church of England Sunday School Institute, 2s. 6d.). But perhaps the most important work in this department is Mr. G. B. Ayre's "Suggestions for a Syllabus in Religious Teaching" (S.C.M., 4s. net), which has appeared this year. The suggestions are graded according to the school years. The general truth illustrated is the Fatherhood of God—as revealed in His care for His children (Year I), in the lives of His servants (Year II), in Jesus Christ (Year III), in an earthly brotherhood (Year IV); Years V—VII are devoted to the History of the Hebrews, carried down through the "inter-Testament period" to the New Testament, the growth of the Gospels, and development of early Christianity, etc. An appendix contains stories to illustrate the ideas underlying the League of Nations. An excellent Bibliography is given at the end containing, among other things, a useful section on missionary literature. Finally, some books of general interest and value for Bible study may be mentioned before this article is concluded. "The Prophets of the Old Testament and their Message," by Canon Storr (S.P.C.K.) is admirable for class teaching. The one-volume commentary on the Bible by Dummelow has been found very useful, and the more critical one-volume commentary on the whole Bible, edited by Prof. Peake, may be strongly recommended (Jack, 12s. 6d.). The "Historical Bible," edited by C. F. Kent, in six volumes (Hodder and Stoughton) is quite admirable; and there has just appeared an edition of Dr. Moffatt's "Translation of the New Testament into modern English," printed with the A.V. in parallel pages. Nothing could be more helpful and illuminating.

One last remark. Some teachers already realize what an excellent objective and stimulus for intelligent Bible-study in the schools is provided in the scheme of subjects prescribed for Religious Knowledge in the General School Examination of the University of London. This has recently been revised and greatly improved. The number of candidates taking this subject has substantially increased within the last four years; but there is still room for considerable expansion, and it is much to be hoped that a larger number of schools will make "Religious Knowledge" one of the subjects taken for the General Examination.

THE Civic Education League, Leplay House, 65 Belgrave Road, S.W. 1, has organized a number of group correspondence courses dealing with subjects philosophical, scientific, literary, historical, biblical, musical, &c.

UNIVERSITIES AND SCHOOLS.

ENGLAND.

The Universities have been in the throes of the Parliamentary elections during the past month. No catastrophic changes of representation have to be recorded. At Oxford, Lord Hugh Cecil and Sir Charles Oman are again returned. The third candidate, Prof. Gilbert Murray, did well, securing second place on first preferences, under the proportional representation system. He was defeated by the transferred votes. At Cambridge, under the same system of voting, Mr. Butler, standing as an Independent, friendly to the position of women in the University, was able to secure election as colleague to Mr. Rawlinson. Sir Sydney Russell-Wells (Conservative) was elected at London by a handsome majority, his poll exceeding the combined polls of his two opponents, Prof. Pollard (Liberal) and Mr. H. G. Wells (Labour). No change of representation occurred for the combined English Universities, Sir Martin Conway and Mr. Fisher being again returned; but Prof. John Strong, supported largely by teachers, put up a very good fight, and at one stage of the counting appeared to have a good chance of election. In this constituency Manchester University provides much the largest contingent of voters. For Wales Mr. T. A. Lewis was returned by a small majority. It is now possible to see the effect of the revised system of University representation introduced in 1918. Whereas under the old dispensation, all the representatives were Conservatives, there are now two members, Mr. Fisher and Mr. Butler, of the opposite party. The Labour Party appears to have made no progress, Mr. Wells's poll at London being distinctly less than Prof. Sidney Webb's in 1918; but it must be remembered that in 1918 there was no Liberal candidate. The representatives for the English and Welsh Universities, now numbering eight, should form a formidable element in the House of Commons with its reduced membership (due to the establishment of the Irish Free State) and the small Government majority.

Mr. Fisher's ingenuous admission in his speech at Manchester that his only failure as Minister of Education was the "reform" of the University of London, must not be allowed to pass unnoticed. The term "reform" seems a little harsh, and we should have preferred "re-constitution"; for the University, whatever its faults may be, has worked with industry and some success under the constitution given to it by Parliament some twenty years ago, and in the inadequate premises provided by the Government under a much older obligation. Mr. Fisher has done a great service to the cause of higher education in London by inducing the Government to provide the new site in Bloomsbury for the University. If he has actually drafted the scheme of "reform" which he tells us he "had in view," it should be published without delay, for his informed and sympathetic mind may have found the ideal solution which evaded the combined wits of the Royal Commission presided over by Lord Haldane. Mr. Fisher's *peccari* helps to define the position of the Government to which he belonged, but things cannot remain indefinitely as they are.

The memorial to the distinguished chemist, Sir William Ramsay, has been unveiled by the Duke of York in Westminster Abbey. The result of the appeal issued in 1917 reflects the greatest credit on all concerned, the sum of £57,645 having been raised in cash. In addition a number of research Fellowships have been instituted by various Dominion and foreign governments. The scheme should bring to this country a number of brilliant young men of science, a valuable accession in any case, and a stimulus to the provision of adequate research facilities. Ramsay Fellows are already at work at London, Oxford, Cambridge, Glasgow, and Liverpool.

The University of Leeds has enrolled 1,535 full-time students this year, the decrease of about 100 compared with last year being due to the falling off in the number of Service students.

The staff of the University has lost valued members in Profs. Goodman and Kendall, whose Chairs have been filled by Dr. W. T. David, of Cardiff, and by Dr. Albert Gilligan. Prof. Lascelles Abercrombie, from Liverpool, succeeds Prof. G. S. Gordon in the English department, and Mr. A. Hamilton Thompson becomes Reader in Medieval History. The generous benefaction of £20,000 from Sir Edward Brotherton has been

devoted to Pathology and Bacteriology; Dr. J. W. McLeod has been appointed to the new Chair. A full series of public lectures on art, science, music, and literature, will be given in the winter months, under arrangements made jointly with the Leeds Philosophical and Literary Society.

Principal H. J. W. Hetherington's annual report on University College, Exeter, describes the steps which are being taken for the establishment of a South-Western University. The inclusion of the

College in the Treasury list for grants marks a distinct advance of status. Several valuable benefactions have been received, including £1,000 from Lord Hambleden, £2,000 for scholarships from the late Mr. Andrew Simms, £8,000 in stock from Sir Henry Lopes, and a mansion house and eleven acres at Streat-ham Hall from Mr. W. H. Reed. The governors have purchased 100 acres of land adjoining the Hall, and the new site is to be prepared for occupation at an early date. The Devon County Council has agreed to increase its annual subvention to the College from £4,000 to £5,000.

SCOTLAND.

Throughout the past year, the Historical Association of Scotland, which numbers among its leaders all the outstanding teachers of history in the universities, has been exceedingly active in pushing the claims of the subject. It has sent deputations to address a number of the larger Education Authorities and has followed up interviews of this kind with circulars on the necessity of history in the training of citizens. It has also interviewed Dr. MacDonald, the Secretary of the Education Department, himself a historian of note, and put before him the case for greater provision of facilities for the study of history in the schools of Scotland. Everywhere the burden of their argument has been the same. History is a subject of supreme importance in a modern community, but though that is generally admitted the time given to its study in the schools is totally inadequate and in a large number of cases the teachers of the subject are quite inadequately trained for their task. The Education Department, evidently trying to meet the Association half-way has recently announced that in 1925 the Higher Paper in the Leaving Certificate Examination (which is only taken in a few schools by a small number of pupils) will be discontinued, and the examination in Higher English will be modified to include questions on History. But most of the historians are as little satisfied with the new arrangement as with the old. Though it makes history practically a universal study among the older pupils it not only subordinates it to English, but commits the teaching of it in most schools to teachers who are specialists in English and not in History. In this way the place of the History specialist on the secondary school staffs has become less secure, and there is considerable risk that a proposal evidently meant to help History may have the opposite effect. The whole situation is rather puzzling. In the actual working of the schools it is difficult to make time for History as an independent study on the level of the accepted subjects without prejudicing the teaching either of English or of the languages. The advocates of history seem generally to want room made for their subject at the expense of English—which brings them up against a great body of opinion in favour of the continuous study of English by all pupils throughout the secondary course. A better opening for the advance they desire would be secured by the discontinuance of foreign languages, ancient or modern, after the Intermediate Examination, on the part of the very considerable number of pupils who will never in later life make any use of the languages. A Leaving Certificate with History and Geography made important would give a better cultural basis than most of the groupings which are popular at present. The studies of the secondary school are still too pretentious and too remote from life. Such a recognition of history might fit these schools better for the training of ordinary boys and girls who do not go to the University.

The uncontested return of Mr. D. M. Cowan, the Parliamentary Secretary of the Educational Institute, as one of the M.P.s for the Scottish Universities, has given general satisfaction to all Scots who have followed his career in the last Parliament. Even those who remain dubious about the direct representation of teachers at Westminster, are ready to admit that in the many questions on educational policy which have arisen since 1918, Mr. Cowan's expert knowledge, combined as it is with a high degree of practical wisdom, has been of the greatest value to Scottish education. The only people who have ever expressed

themselves dissatisfied were a few members of the Institute Council who wanted him pledge-bound to take his orders on all educational questions from the Council. The matter came up for discussion at a recent meeting, but Mr. Cowan found no difficulty in convincing the reasonable majority that his influence in the House of Commons would disappear if it were known that he was a mere delegate. The minority very wisely accepted the verdict, and later joined in the unanimous finding to support Mr. Cowan in his candidature in the event of a contest.

The Report of the special Committee appointed by the Central Executive of the National Committee to go into the much debated question of Training College instruction ought to have been of great value. The Committee conferred with Inspectors, Directors of Education, and Institute representatives, and invited opinions by questionnaire from teachers of every type as well as from students recently in training. In spite of all this bustle of consultation the recommendations of the Committee consist of vague, unhelpful generalities which never come within sight of the real problems. There is only one new suggestion. One of the constant criticisms of teachers on the products of the Colleges is that they come to their work without experience in personal control of a class. The committee proposes that there should be a month's probationary teaching by candidates for admission to training—that is an old idea—and that at the end of their two years' course there should be a longer period of probation on half pay in actual and responsible teaching under normal circumstances in selected schools situated in the student's home area. The sting of the plan is in the half-pay idea; as if the young teacher entering the profession were not already on half-pay in consequence of the ordinary operation of the scales! The fact of the matter is that any discussion of curricula which fails to recognize that two years is too short a period into which to cram all that a student in training ought to learn is bound to be futile. The curse of the present system is the multitude of subjects. The obvious way of escape would be to extend the course to three years, as could easily be done at the present time when students are more plentiful than jobs. If the National Committee (or the Education Department?) is not prepared to face that long overdue reform it would be better to scrap some of the present subjects in order that those left in should be properly taught. Some of the culture subjects, for example, might profitably be omitted in view of the fact that the students have all been in attendance at secondary schools and come to the college better equipped than their predecessors for whom the curricula in use were originally designed. And the teaching of Logic and Ethics, which would be right and proper if there were plenty of time and if the teachers of these subjects could put them into relation to school work might be entrusted to the lecturers on method and educational theory.

The formal opening of the new Training College for teachers at Jordanhill, by the Right Rev. Dr. Smith, Moderator of the established Church and Chairman of the Glasgow Provincial Committee, marks the completion of a great scheme. When the training colleges passed from the hands of the Churches into the charge of the Provincial Committees fifteen years ago, all four Committees realized the necessity for new buildings to house the ever increasing number of students in training. It is rather an unhappy circumstance that now that the last of the new Colleges is ready, a dearth of students should make the plans for fine colleges seem grandiose. The buildings in Glasgow were erected on generous lines for 1,200 students, and are said to be the finest and most extensive of their kind in Great Britain, if not in the world. But with only 800 students in attendance and a spirit of economy abroad they give the impression of unthriftiness, which only a return to more normal times and larger needs will dispel. Scotland certainly requires the 1,200 students—and more—if it is to maintain its proud traditions in education.

Evidently satisfied with the great success of Sir James Barrie in the Rectorship of the University, the students of St. Andrews University have now chosen Rudyard Kipling as his successor. The candidates were Mr. Lowther (now Viscount Ullswater), the late Speaker of the House of Commons, and Mr. Kipling, and the election of Mr. Kipling may be regarded as the triumph of the non-political over the political interest. With the other universities still making the triennial struggle for the Rectorship a political event, it is not a bad thing that one University should take advantage of the ancient office to associate with itself men of distinction in other spheres than politics.

The New Training College at Glasgow.

The Scottish Teachers' M.P.

WALES.

The half-yearly meeting of this Association was held at Shrewsbury on October 28 and 29, with Mr. E. D. Jones, M.A., of Barmouth School, in the chair. Several interesting discussions on questions of internal organization and school policy took place. The regulations of the Board of Education for the year 1923 were also carefully considered and, among other resolutions bearing upon them, it was resolved that the Association, while welcoming the regulation requiring an earlier age for admission, regards the adoption of a uniform age for urban and for rural schools as calculated to militate against the best interests of education in Wales. The time table for the July Examination of the Central Welsh Board was subjected to a good deal of criticism and the Central Welsh Board was requested to do everything possible to minimize the present strain on the candidates. It was felt that to demand two papers of three hours each on the same day at the senior stage was unreasonable, and there was a consensus of opinion that it should be possible to confine the examination to the last two weeks of term. The Matriculation of the University of Wales has for some time been regarded as not altogether suitable as a test for candidates. The number of compulsory subjects is excessive; and the candidate is required to pass in six subjects, which is more than is demanded by any other University. A series of resolutions requesting the University to revise its regulations in order to bring them into conformity with the conditions under which School Certificate Examinations are now held were adopted. Mr. D. R. O. Prytherch, M.A., of Penygroes School, was elected President for 1923.

A very instructive and lucid paper on the Relationship of the Secondary Schools and the Training Colleges of Wales, was read at the same meeting by Principal D. R. Harris, of the Bangor Normal College.

This relationship is important because the number of students admitted to the Welsh Training Colleges every year is about five hundred, of whom the great majority came from Welsh Secondary Schools. Owing to the keenness of the competition for admission, it is now possible to exact a higher standard of attainment among these candidates than was formerly the case. What is required now is an improved type of secondary school pupil—a sixth form pupil whose attainments are at least well up to a Matriculation standard; though it is not so important that they fulfil Matriculation requirements with regard to subjects, as that a good standard of attainment in the subjects of the elementary school curriculum, namely, English Language and Literature, History, Geography, and Arithmetic should be guaranteed. The present system by which the Training Colleges insist on at least one year's teaching experience is not an unmixed advantage, because it involves a break in the pupil's studies at a time when intellectual interest needs every encouragement, and there is also the fact that very often this experience is obtained under conditions which are positively unhelpful and undesirable. It may therefore be questioned whether an additional year in a good secondary school, with the kind of discipline and responsibility which the sixth form of such a school provides, may not in the end prove of greater advantage than the present student teacher year does. Dealing with the subjects of the curriculum, Principal Harris pleaded for a higher standard of expression in English, but as to Welsh it may fairly be claimed that the Intermediate Schools and Training Colleges have rendered very great service to the cause of Welsh Education during the last twenty years by the encouragement they have given to the systematic study of Welsh Literature, Grammar, and Composition. The subjects of Music and Drawing on the other hand do not receive anything like the attention they deserve in the schools, and a strong plea was made for closer co-operation between the schools and the colleges as regards these essential subjects of the college curriculum. The training college for two-year students is, under present conditions, essential for the professional training of the teacher, and so the need for close co-operation between it and the secondary school is obvious. There is much to be said in favour of a plan of education and training which provides for such a prolongation of the school course as would lead to a Higher Certificate in the English subjects and afford an adequate training in Music and Drawing so as to leave the training college more time for an intensive period of professional training. Such a course might be followed by a period of probation after leaving college, extending for a period not exceeding two years, while experience of summer schools has shown that much might be done by a quinquennial term of post-collegiate training in re-kindling interest in the teacher's daily work.

The annual general meeting of the Court of Governors was held at the College on November 17, under the chairmanship of the President, Mr. F. W. Gilbertson. This College has only been in existence for two years, but has already made substantial and steady progress. During the last session a faculty of Arts was opened, and a training department for men and women established. In the faculty of Science there were 102 students and 36 in the faculty of Arts. Much progress has also been made with the provision of new premises, and the departments of Physics and Metallurgy are now completely equipped, while considerable progress has been made with the erection of a new chemical laboratory. When these laboratories are finished, the equipment of the College will be complete, except that of engineering which must unfortunately remain isolated on a different site. The Court once again has drawn attention to the urgent need for the establishment of a Chair of Philosophy, which the University Council has so far refused to sanction for financial reasons. The development of the College is handicapped on the Arts side until this omission is rectified. The College is, however, increasing in the manner which is best under present circumstances, namely, gradually. During the present session there are over 200 students, and in spite of the difficulties inherent in a young institution, there has been some research work done both in pure knowledge without direct application to industry, as well as in research work of value to local industries. This College has been exceptionally fortunate in having so many local benefactors who are willing to come to its support. A most valuable gift was made public at the meeting of the Court, for Mr. Roger Beck, an ex-director of Baldwin's, Ltd., has presented the College with six large houses in Gwydr Gardens, in close proximity to the College, which can easily be converted into hostels for the students. This generous donation has solved a very difficult problem for the College, situated as it is in an industrial town. The Coal Owners' Association of South Wales has also promised to contribute a sum of £1,000 per annum for five years for the development of engineering, for geological research in the coalfield, and for extra mural work in economics, History, and Literature in the anthracite district.

At the annual meeting of the Court of Governors, a slight decrease in the number of students was reported. There are 920 students in residence this session, which includes a large number of students, 95, who have returned for post-graduate studies. This is a very interesting feature of the work of the College. The Principal, in an instructive review of the work of the last year, commented on the high standard of the degrees in the University. The Colleges, under the terms laid down by the University Commission, have secured much greater individual freedom which they have, generally speaking, used in the direction of raising the standard of the initial degrees. This has been mainly rendered possible by the improvement in the quality of the candidates who enter after having passed the Higher Certificate Examination of the Central Welsh Board.

The number of students at the College is now 600, which is slightly less than in the previous session. The number of post-graduate students pursuing research work is, however, on the increase, and to meet their requirements it is proposed to push forward as quickly as possible a scheme for new laboratories. Principal Sir Harry Reichel also reported that the Quarrymen's Union has founded a lectureship worth £1,000 and 15 quarrymen attended the college for a continuous course of study. A sum of £1,000 has also been presented to the College for a series of lectures in Literature. This year, these will be delivered by Mr. Clutton Brock. The most interesting innovation in the College is the establishment of a faculty of Theology, which is intended to co-ordinate and supplement the work of the denominational colleges for the B.D. degree.

The number of students at the College during this session is 941, which is also a slight decrease as compared with the previous session. In the Annual Report much space was devoted to financial considerations. There is still a small deficit on the account, due chiefly to the recent increases in the salaries of the staff, and the appeal on behalf of the College has not been as successful as was anticipated, as only £80,000 has been received towards the sum of £250,000 which was required. The National School of Medicine during the first year of its work has been very successful, as there are about 200 students in the school, 23 of whom are fourth-year students. Interesting particulars were

The number of students at the College during this session is 941, which is also a slight decrease as compared with the previous session. In the Annual Report much space was devoted to financial considerations. There is still a small deficit on the account, due chiefly to the recent increases in the salaries of the staff, and the appeal on behalf of the College has not been as successful as was anticipated, as only £80,000 has been received towards the sum of £250,000 which was required. The National School of Medicine during the first year of its work has been very successful, as there are about 200 students in the school, 23 of whom are fourth-year students. Interesting particulars were

also given of the subsequent careers of the 200 ex-service men who attended the College.

We regret to learn that Mr. W. Lloyd Parry, B.A., Head Master of Mold County School, passed away very suddenly on October 25 in a Liverpool nursing home. Mr. Parry was 63 years of age. He had taken a very prominent share in all Welsh educational movements and was a man of sound judgment and tact. He was greatly respected by his colleagues, who elected him President and subsequently Honorary Treasurer of the Welsh County Schools Association. He founded the Alum School, Mold, which was afterwards converted into an Intermediate School in 1895.

FOREIGN AND DOMINION NOTES.

GERMANY.

The monkeys in the forest educate themselves by self-activity, and do no home lessons; why should our children be worse off than monkeys? A daily newspaper has lately unselfishly opened its columns to those who would relieve the young from all obligation to do work out of school. If the little dears have been in a classroom for five hours of the day, surely, it is argued, they might be left free for the other nineteen—when not eating or sleeping—to commune alone with nature, to visit the picture palaces, to study ornithology in birds' nests or social economy on the streets of our towns. Germany has not gone so far; on the contrary, since the long holidays the higher schools of Prussia have been working under an experimental *Konferenzordnung* which makes it one function of the teachers in conference *Richtlinien für die Verteilung der häuslichen Aufgaben und schriftlichen Klassenarbeiten aufzustellen*—to regulate the apportionment of home lessons and written class-work. In some parts of Germany it has become a crime for a teacher to flog a pupil; in no part, as we think, is it yet an offence to bid boy or girl do tasks out of school. With regard to England, teachers in general will hardly admit a tendency to overwork in either boys or girls—where there seems to be overwork it is usually found to be work done under unhealthy conditions. As to home lessons no universal law can be laid down, and the essential thing is that a child should be kept under *educative influences through practically all his waking hours*. The darning needle, the hockey stick, the cricket bat, the box of water-colours, the piano, the embroidery frame—they are instruments of education no less than the text-book and the map. It is as absurd to say that John may not learn a history lesson at home in the evening as to say that Joan may not play the violin in school during the day. And always we must remember that our children are *not* monkeys: and we must be earnest in grafting on the individual the experience of the race—a duty towards the young of which the simian world shows no consciousness.

Schiller mocked at those who would sell wisdom cheap and wrote as a bookseller's advertisement:—

“Nichts ist der Menschheit so wichtig, als ihre Bestimmung zu kennen:

Um zwölf Groschen Courant wird sie bei mir jetzt verkauft.”

Nowadays, what with high wages and dear material, it is

little indeed that men could learn about their destination for ten Groschen. Journals' in particular, are sorely distressed and the mortality among them is terrible. In August alone 144 perished, and hardly a day goes by without adding to the number of the dead. To our regret many educational journals stand in peril, and others, *Der freie Lehrer*, for example, are extinct. But the Saxon Lehrerverein has resolved to preserve *Schule und Elternhaus* at all costs, and in some cases there will be fusions of two or more organs of opinion. *Die Allgemeine Deutsche Lehrerzeitung* this quarter raises the postal price of Edition A from 32 Mk. to 120 Mk., and of Edition B from 48 Mk. to 180 Mk. The voice of German pedagogy in the past has been inspiring; it is sad that it should now find difficulty of utterance. A counterpart to the subsidence in German journalism is the accumulation in America of German printing paper, on which, it is stated, the whole of the Hearst press is printed. Is it all symbolic? Is Germany no longer to contribute ideas to the common stock but only to furnish the sheets on which ideas are circulated? It were a thing to be deplored if it were really to be feared.

(i.) For many English, as well as German, readers, Nietzsche has an unchanged fascination. The *Leipziger Lehrerzeitung* (*Literarische Beilage*, Oct., No. 17) publishes an article, “Neue Nietzsche-Bücher,” in which are noticed recent works on the Apostle of the Superman, highly commended among them being Ernst Bertram's “Versuch einer Mythologie” (Georg Bondi, Berlin).—

(ii.) Saxony is lamenting the death of Paul Barth, which took place on September 30th. A professor of philosophy and pedagogy in the University of Leipzig, and joint director of the Philosophisches Institut, he wrote a “Philosophie der Geschichte als Soziologie” and “Die Geschichte der Enziehung in soziologischer und gewissenschaftlicher Beleuchtung.” An advocate of the secular school (*Weltschule*), he hoped to see it developed as a nursery of the True, the Beautiful, and the Good.—(iii.) In a recent address at Berlin to a meeting of the German Volkspartei, Unterrichtsminister Dr. Boelitz announced that the draft of a new *Reichsschulgesetz* (Imperial School Law) would presently be laid before the Education Committee of the Reichstag. Should it not become law a Provisorium would be necessary.

FRANCE.

There are some in England who would exclude from education the stimulus of competition, of which France has no fear. It was not the dread of unwholesome rivalry but a wish to discourage unwholesome specialization that caused the suppression, some twenty years ago, of the *Concours général*, the competition in specified subjects among the pupils of secondary schools in Paris and the provinces. A prize, it was thought, bore witness to what had been neglected as well as to what had been intensively studied; whereas it was “plus beau de savoir quelque chose de tout, que de savoir tout d'une seule chose.” Measures were taken, however, to prevent concentration on one chosen subject, and the revival of the *Concours général* has been among the most notable events in recent months. The examinations revealed that the provincial *lycées* and *collèges* are holding their own and that the eagerness of provincial parents to send their children to the great Paris *lycées* (Louis-le-Grand, Henri IV, Condorcet) is unjustifiable. On July 11th the great distribution of prizes took place at the Sorbonne, where M. Léon Bérard, Minister of Public Instruction, delivered an address in the presence of the President of the Republic and many other illustrious persons. The journals did not fail to recall the past glories of the competition, and placed by the side of a Michelet, Musset, Augier, Taine, About, Baude-laire, Le Verrier, Berthelot, and Henri Poincaré, many a star of less magnitude which first showed its brightness in the *Concours général*.

Another recent event worth recording—in December we look backward—is the prohibition of Esperanto in the State schools of France. M. Bérard, in his circular on the subject, lays down that a language, to be recognized in primary, secondary, or even technical schools, should have widely extended use and a literature worthy of the name, and Esperanto has neither. If it be serviceable in commerce, it has only the value of a telegraphic code, nor is it conceivable that the majority of men will ever come to pronounce the same sounds in the same way, to give the same sense to the same words. Again, it were sad that an education based on Latin culture should be impaired by the development of an artificial language, seductive because easy. “Le français sera toujours la langue de la civilisation, et, en même temps, le meilleur moyen de divulguer une littérature incomparable et de servir à l'expansion de la pensée française.” Lastly Esperanto has lately become the instrument of an internationalism hostile to national culture. A German writer, commenting on M. Bérard's circular, remarks: “Zamenhoff, the inventor of Esperanto, was in his day decorated by the French Government, whereas Bismarck always viewed him with suspicion. So times change!” For ourselves, we have no fear that Esperanto will cripple the development of our culture or retard the diffusion—unvaunted and inevitable—of the English language.

All France has been talking of M. Léon Daudet's “Le Stupide XIX siècle”—the title alone a prick to our self-satisfaction. He holds up to contumely as *principes de mort* twenty-two favourite doctrines of the Nineteenth Century: that it was the age of science, of progress, of democracy as continuous progress; that the Middle Ages were dark; that religion is the child of

fear; that evolution is the law of the universe; and so forth. Praise of the book comes from the Catholic side; but it is well for us all to examine from time to time our beliefs, to clarify them, to justify them. We give in M. Daudet's own words the statement of his position and his purpose: "Au XIX^e siècle, qui fut celui du nombre brut, de la quantité, de l'antiquité, des stupidités révolutionnaires et libérales, et de leurs vingt-deux principes de mort, l'audace fut du côté des destructeurs. Il s'agit de faire que, maintenant, elle soit du côté des reconstruteurs, de ceux qui détiennent le bon sens et le réveil de la raison agissante. Le terme, injustement bafoué, vilipendé, honni, de réaction doit être relevé et repris hardiment, si l'on veut donner la chasse à l'erreur sanguinaire, si l'on veut ramener, ici et ailleurs, la vraie paix et les institutions et notions de vie, avec la ruine des notions et institutions de mort, honorées au XIX^e siècle. Je n'ai pas écrit ce livre véridique, ce livre de bonne foi, pour autre chose que pour rendre cœur à la réaction, c'est-à-dire aux reconstruteurs, dans tous les domaines, sur tous les plans, dans tous les milieux; que pour leur inculquer cette certitude, cette ardeur, où paraît le signe de la victoire."

POLAND.

The Polish employment exchange statistics for 1921 show that 75 per cent of the applications for employment made by young persons were for unskilled work. In view of the surplus of unskilled workers and the decrease in the number of apprentices in various industries, the Central Employment Department has drafted a Bill to set up vocational guidance committees in connexion with the employment exchanges. These committees are to consist of one representative of industrial employers, one of agricultural employers, and one of commercial employers, two representatives of the trade unions, and one of the guilds. Their objects will be to co-ordinate the work of all institutions which deal with vocational guidance, to collect information on the subject, and to induce young persons to undergo training in an occupation in which their employment will serve the economic requirements of the country. The committees will also draw up a scheme of work to be undertaken by the public employment exchanges in providing vocational guidance. They will be asked to consider possible methods of collaboration between the public employment exchanges and the guilds in providing for the apprenticeship and the placing of young persons, and of collaboration between the public employment exchanges and the technical schools concerning the provision of technical instruction for young persons.

INDIA.

In Bombay the committee appointed by Government to consider the introduction of compulsory education in the Presidency reported in favour of gradual introduction, the majority being for commencing with city municipalities. The text of the Bombay Compulsory Education Bill has since been published, and will be found in the *Collegian* (xviii. 5). In the Madras Presidency the Municipality of Erode has included girls on equal terms with boys in its scheme for compulsory primary education. The committee was unanimous in this decision and additional taxes of 1 per cent. on the property tax and 25 per cent on the professional tax have been raised for this purpose. In the Punjab the Conference of Inspecting Officers (*Proceedings*, Simla, 1922) had the depressed classes conspicuously in view and formulated its opinion thus: "In a scheme of compulsory education, individuals and not classes of the community should be eligible for exemption; and that provision should be made for the education of all boys, including those of the depressed classes." The Punjab Government has stated that it cannot give grants from the public funds for the introduction of compulsion unless these grants are used for the benefit of all classes of the community. Assam has a Bill for the introduction of compulsory primary education (boys) in hand. It provides for compulsion in areas where the local authorities have asked for it.

THE ALICE OTTLEY SCHOOL FOR GIRLS, WORCESTER, has been enlarged by the addition of new buildings for the Kindergarten, Domestic Science Departments, the Library and Music Rooms. The school still maintains its high reputation. Recent successes include two Higher Certificates of the Oxford and Cambridges Joint Board, with three distinctions, sixteen Lower Certificates, and sixteen School Certificates.

TOPICS AND EVENTS.

TEACHERS' SALARIES.—We are asked to state in reference to the recent announcement in the press of the proceedings of the Standing Joint Committee, that the meeting was of the Committee responsible for the salary scales in *elementary* schools only. The Committees responsible for the scales in secondary and technical schools has not met recently.

THE COUNCIL OF THE TEACHERS REGISTRATION COUNCIL has passed the following resolution: "The Teachers Registration Council, as a representative body of Teachers appointed under the authority of Parliament, and charged with the duty of forming and keeping an official Register of Teachers, is gravely concerned by the continual employment in our schools of a large body of persons who are not fully qualified for teaching work. In particular the Council strongly deprecates the recent action of the Education Committee of the London County Council in arranging that unqualified women shall be teachers in infants' schools after a period of inadequate preparation lasting for three months. The Council is strongly opposed to the practice of laying upon Registered Teachers the obligation to take any part in this wholly inadequate form of preparation, and it desires to call the attention of the Board of Education, the London County Council, and the other administrative authorities of the country to the fact that any adequate system of education in a modern community demands the service of skilled and qualified teachers."

THE EDUCATION GUILD.—An interesting discussion meeting has been arranged by the Education Guild to take place on Friday, December 8th, at 8 p.m., at 9 Brunswick Square, W.C., when the Report of the Consultative Committee on Differential Curricula for Boys' and Girls' Schools will be discussed. Principal Ernest Barker, of King's College, London, a member of the Consultative Committee issuing the Report, will open the Discussion, and another member of the Committee, Mr. Frank Roscoe, M.A., Vice-Chairman of the Guild, will also take part. The Guild will be glad to welcome non-members who are interested in the subject under discussion. The Education Guild has also arranged two other interesting meetings to take place during the Conference of Educational Associations in January. The first will be held on Monday, January 1st, at 2.30 p.m., in the Physics Theatre, University College, Gower Street, W.C., when Mr. John Drinkwater will give a paper on "Art in Education." The second open meeting, following immediately on the Annual General Meeting of the Guild, will take place at 12 noon on Tuesday, January 2nd, in the same place, when the President of the Guild, the Right Hon. Lord Gorell, C.B.E., will deliver an Address on "The Rise of the Teaching Profession."

EURHYTHMY.—Dr. Rudolf Steiner has set himself a high ideal. He claims that his "new art of eurhythm" not only helps to "strengthen and beautify bodily movements, but has a moral and spiritual influence on the life of feeling." It is not a new idea that Art, rightly taught, has an ennobling influence on the general development of the pupil. Plato developed the theory in his "Republic." M. Jaques Dalcroze devotes his life to proving it. In the performance of Eurhythm given on November 11, examples were seen of "expression in movement to those elements in music and poetry that become embodied in the voice in singing and reciting." We quote from the programme. The technique of the performers varies considerably. We liked the "mining" of the figure dressed in yellow in "The Soul's Awakening." Other students rely too much on the same sequences of gestures and poses, making these serve for widely different aims. The facial expression is at present stiff and tense. This may be partly due to the highly emotional reading of the passages to be interpreted. The simplest thoughts are emphasized in a way which at times destroys the balance of the whole. But the colour effects were a joy to the eye.

"THE IMMORTAL HOUR."—In his setting of Fiona Macleod's drama, Rutland Boughton follows the Wagner tradition of the "Leit Motif." The fairy world from which the heroine comes has its appropriate melodies—and what charming ones! Mr. Shelving, who is responsible for the scenery and costumes, has greatly enhanced the effect of the whole by his admirable choice of colouring. For the fairy world—tender, mysterious blues and greens. For the ordinary world—a brave display of crude

(Continued on page 778.)

MACMILLAN'S NEW LIST

PART III. READY DEC. 5th.

OUR HELLENIC HERITAGE. By H. R. JAMES, M.A. 2 vols. With Maps and Illustrations. Vol. I, 6s. net. Part I: THE GREAT EPICS. 3s. 6d. Part II: THE STRUGGLE WITH PERSIA. 3s. 6d. Vol. II, Part III: ATHENS: HER SPLENDOR AND HER FALL. 4s. 6d.

"A charming introduction to early Greek history. . . . I am sure that books of this kind will do more than anything else to keep alive general interest in ancient Greece, and make it possible to preserve Greek civilization as a subject in educational programmes."—Prof. J. B. BURY.

THIRD EDITION.

SCHOOLS OF HELLAS. An Essay on the Practice and Theory of Ancient Greek Education from 600 to 300 B.C. By KENNETH J. FREEMAN, Scholar of Trinity College, Cambridge. Edited by M. J. RENDALL, LL.D. With a Preface by A. W. VERRALL, Litt.D. Illustrated. Third Edition. 7s. 6d. net.

PINDAR IN ENGLISH VERSE. By ARTHUR S. WAY, D.Litt. Pott 4to. 10s. 6d. net.

colours! And, subtle touch at the end, when Etain wanders back to Fairyland with the fairy prince who has come to fetch her, she exchanges her gorgeous queen's robe of red and gold for the simple clinging one of blue and green, in which we first saw her, a visitor from the land where ideas take the place of action—where dreams reveal more than logic. It is difficult to select, where all is beautiful. We have spoken of the fairy melodies. We must also note the wonderful "fountain" music, the mocking song of the wood spirits, and the haunting melody of the bard. The acting is of a high level, some of the poses may be a little rigid, but they are nearly always beautiful. The singing is variable, but the orchestra is excellent throughout. Rarely has a more beautiful thing been offered to the public. To see it once is to get out our engagement book—and enter our next visit!

SECONDARY EDUCATION AT OLDHAM.—The people of Oldham have set a notable example to other towns in providing secondary school accommodation for their children. In 1887, Oldham successfully proved its claim to share in the income of the Hulme Trust Estates, Manchester, and a scheme was drawn up by the Charity Commissioners for the building and endowment of the two Hulme Grammar Schools which were opened in 1895, under the same roof, but as separate schools for boys and for girls. The building having grown too small for the numbers desiring admission, two public-spirited gentlemen in Oldham got together a committee, and set on foot a public subscription for its extension. The list was headed by £3,000 from the Master Cotton Spinners' Federation, and was followed by various sums ranging from £1 to £1,000, subscribed by Oldham firms as well as by individual townspeople, for the work of the schools was so greatly valued that it was desired that they should continue under the same independent conditions in the future as in the past. In spite of the prevailing depression in the cotton trade, nearly £14,000 was raised and handed over to the Governors of the School, who already possessed a further substantial sum. It was decided to put up a new and separate school for the girls, and to hand over to the boys nearly the whole of the existing building. The plans have just received the sanction of the Board of Education, and the work has been put in hand. In its short life of twenty-seven years, the school has gained an excellent reputation, and with increased facilities should do better still. Among the girls who have gone to Oxford, two have been placed in the First Class. One of these is now head mistress of the sister school at Bury. A third Oxford graduate is Chief Inspector of Schools in the Madras Presidency, while others are in English high schools. One old Cambridge student added the London M.D. to her Science Tripos, and did such good service as a surgeon in France as to be awarded the Croix de Guerre. She was the first of a lengthening line of Oldham women-doctors, while in the legal profession the school is represented at the Inner Temple by a London M.A. The present head mistress is the youngest of three sisters who have all been heads of high schools. The first head mistress resigned on her marriage in 1898, when Miss Clark took up the work which she will lay down next Whitsuntide after twenty-five years' service.

OPPORTUNITIES FOR WOMEN-COOKERY SCHOLARSHIPS.—The London County Council is prepared to receive applications for admission to a short course of instruction in Cookery under a professional chef at the Westminster Technical Institute, Vincent Square, S.W. 1. The course will last for twelve weeks beginning in January next. The object of the course is to give an opportunity to young women in domestic service to become qualified household cooks. It will be arranged for part-time only, so that, with the co-operation of their mistresses, students in training may retain their situations. The tuition fee is £1 for domestic servants, and £3 for other persons. Intending students, however, between seventeen and thirty-five years of age, who have been in domestic service for a year or more, may apply for free tuition and a grant of £5 to defray expenses, provided their parents (or, if over twenty-one, the students themselves) reside in the county of London. Further particulars may be obtained from the Education Officer, County Hall, Westminster Bridge, S.E. 1.

COMMERCIAL TRAINING.—The Metropolitan College, St. Albans, has issued a valuable guide to the instruction offered by the institute. All the work is conducted by post and training for business life in most of its aspects is given. Of more interest to our readers, however, will be the courses which are available in preparation for the London University examinations for

commerce degrees and various special courses, such as those in economics and foreign languages, and the commercial teachers' courses. The college works under the usual conditions of correspondence methods with the addition of a guarantee, for a small additional fee, to coach a student until successful in a given examination. Many successes are claimed for the system.

CONFERENCE OF EDUCATIONAL ASSOCIATIONS.—The Eleventh Annual Conference of Educational Associations will be held this year at University College, Gower Street, from Friday, December 29th, to Saturday, January 6th, 1923. The Inaugural Meeting, however, will take place on the afternoon of Thursday, December 28th, at Bedford College, Regent's Park. The President of the Conference, Sir Michael Sadler, C.B., K.C.S.I., will take the chair at 3 p.m., and will deliver the Presidential Address. There are now fifty-five Educational Associations affiliated to the Conference, and with the exception of two or three, all these Associations are holding meetings. As usual there will be two Joint Conferences, the first on Saturday, December 30th, at 10.30 a.m., and the second on Friday, January 5th, at 2.30 p.m. At the first Joint Conference the subject under discussion will be "How can the recommendations of the Four Reports on the Teaching of Classics, Modern Languages, English, and Science be carried out in the schools." The speakers on this occasion will be Dr. Cyril Norwood, Mr. W. W. Vaughan, Mr. George Sampson, and Mr. C. W. Crook. The subject of the second Joint Conference will be: "How can the links in the chain of education be strengthened," the speakers being Mr. W. G. Cove, Mr. E. Sharwood Smith, the Rev. H. J. Chaytor, and Mr. Spurley Hey. With regard to the social side of the Conference, a *soirée* will take place on the evening of Tuesday, January 2nd, at the Skinners' Hall, Dowgate Hill, E.C. (kindly lent by the Court of the Skinners' Company) when the Incorporated Society of Musicians will provide an attractive programme of music. Tickets (3s. 6d.) must be purchased beforehand from the Conference Secretary. An Official Book Programme with space for notes will be published again this year. This Book Programme will be ready by the middle of December, and will be obtainable from the Conference Secretary, 9 Brunswick Square, W.C. 1, price 3d. post free.

COVENTRY LIBRARIES.—The well-organized libraries in Coventry are known throughout the kingdom, and an addition to the activities of the libraries committee has recently been issued in the form of the first number of the *Readers' Bulletin*, which it is intended to produce twice monthly. This issue gives brief descriptions of the principal groups of works in the libraries of Coventry, among which, at the Gulson (Central) Library, there is a special collection of works likely to be of service to parents and teachers. The collection contains books of collected stories, books on story-telling, child welfare, pedagogy, &c., and has received the approval of the Education Committee. The remainder of the *Readers' Bulletin* is devoted to classified lists of recent additions to the libraries, in many cases a statement of the contents of books being given. This list, which will be the main feature of future issues, should be extremely useful in providing guidance for the users of Coventry libraries.

PSYCHOLOGY IN SCHOOLS.—Some time ago, the Education Guild of Great Britain and Ireland appointed a Committee, under the chairmanship of Mr. W. H. Winch, on psychological research in schools. Several Meetings were held during the past year and abstracts of some of the papers read and of the ensuing discussions have now been issued. Dr. P. B. Ballard presented a paper on the limit of the growth of intelligence, a study based on tests involving absurdities. Dr. Ballard's results confirm those of American investigators, who find that intelligence, as measured by such tests, shows no appreciable growth after the age of sixteen. Mr. Hugh Gordon described some experimental work on left-handedness. The determination of left-handedness is by no means easy; an interesting test used was to ask the subject to make a straight cut at one stroke with a pair of loosely jointed scissors held in the left hand. The committee is of opinion, with Mr. Gordon, that true left-handed persons should be taught to develop their left-handedness. Arithmetical ability was discussed by Mr. D. G. Collar, who found from tests carried out in schools, that computing power is distinct, to a large degree, from the power to do arithmetic of a higher type.

GEOGRAPHY IN STORIES.—Teachers of geography often find difficulty in bringing home to their pupils the conditions of life

(Continued on page 780.)

From Messrs. METHUEN'S LIST

A Complete List will be sent on application

IN THE PRESS and to be PUBLISHED SHORTLY

A French Poetry Book for School and Home. Compiled by A. WATSON BAIN, M.A., formerly Master on the Modern Side, University College School, London, Author of "French Verb Conjugations." Fcap. 8vo. Limp cloth. 1s. 6d.

Contains 60 poems, representing 36 poets from Ronsard to the present day, and is arranged in Two Parts, carefully graduated. It differs from similar school collections in including (1) nothing trivial, (2) several examples of quite modern verse, some by living writers. It contains enough material to last for about three years. There are no notes, but an edition with some sample translations may be published later.

New Books

The World of Man: An Anthology of English Prose for Schools. Selected and arranged by ARNOLD SMITH, M.A., Head Master, County Secondary School, Battersea. 2s. 6d.

Contains 131 passages by 75 writers, from the Authorized Version of the Bible to William James and Joseph Conrad, arranged under appropriate headings so as to form a philosophy of life. A review compares it to the Poet Laureate's "Spirit of Man."
"The World of Man" is a work of art—a grave and dignified little book, with much that is edifying and inspiring."—*Manchester Guardian*.

The Art and Practice of English. A class-book of composition and literary appreciation on novel and original lines. By ARNOLD SMITH, M.A. With a Map. 3s. 6d.

"A most helpful volume which we recommend to the notice of all interested in the teaching of English."—*Educational Times*.

"This book is original, logical, and eminently practical. In the hands of a good teacher it might work miracles."—*Aberdeen Free Press*.

King Henry V. Edited by G. H. COWLING, M.A., University of Leeds. 1s. 6d.

The Tempest. By the same Editor. 1s. 6d.

These are the latest volumes of the Plays of Shakespeare for Schools, in Methuen's English Classics Series. Each contains a Frontispiece, a brief life of Shakespeare, a sketch of the Elizabethan Stage, an Introduction to the Play, a carefully revised text, and short notes. In addition, they have each a drawing showing a conjectural reconstruction of the Globe and Blackfriars Theatres respectively, by Mr. G. Topham Forrest, F.R.I.B.A., F.G.S., Architect to the London County Council.

"Mr. Cowling's new edition of 'Henry V' is admirably suited for use in the classroom."—*Education*.

Plays previously issued:—"The Merchant of Venice"—"Julius Caesar"—"As You Like It"—"Twelfth Night"—"Macbeth"—"A Midsummer Night's Dream."

Letters from Constantinople. By Lady MARY WORTLEY MONTAGU. Selected, with Introduction and Notes, by HILDA CHATWIN. M.A. 1s. 9d.

Charming letters, delightfully written, and of special interest at the present time, when the Ottoman capital is the storm centre of Europe.

Pages of Science. Selected and edited by GEORGE SAMPSON, Hon. M.A., Cambridge. 2s.

The last of a series of six volumes of typical selections from modern writers by the same Editor. Specially suitable for reading on a Science side.

The previous volumes are:—Pages of History—At Home and Abroad—Modern Essays—Lighter Moments—Scenes and Sketches by Modern Writers.

Verse Translations from the French. By MINNIE H. D. NUTT. 2s. 6d.

Translations of 52 poems, from Ronsard to the present day, mostly in the original metre, and with French and English printed side by side. Sir Donald Macalister, M.D., D.Sc., D.C.L., K.C.B., Principal of Glasgow University, writes:—"The versions from the French seem to me to be well done and often felicitous, and I can heartily congratulate Mrs. Nutt on her success."

Mr. Cloudestley Brereton, M.A., L.-es-L., Divisional Inspector to the L.C.C., writes:—"Some of the translations strike me as really remarkable, while the general effect is most pleasing."

A Century of Revolution. Outlines of European History, 1789-1920. By MARGARET KENNEDY, B.A. With 8 Maps. 5s.
Covers the period of Modern European History set for the General School Examination.

"A very good and a very significant little book."—*Educational Times*.

The Elements of Greek Philosophy from Thales to Aristotle. By R. B. APPLETON, M.A., late Scholar of Christ Church, Oxford, Classical Master at the Perse School, Cambridge. 6s. net.

"The great merit of this book is that it begins at the beginning. . . . The Greek background is remarkably well supplied, and the general effect of the book is excellent. It would be difficult to find a better general introduction to a philosophical course."—*The Journal of Education*.

SOME STANDARD TEXT-BOOKS

Physios

First Year Physics. By C. E. JACKSON, M.A. With 50 Diagrams. 4th Edition. 3s.

Examples in Physics. By C. E. JACKSON, M.A. With Answers. Sixth Edition. 3s.

An Outline of Physics. By L. SOUTHERNS, M.A., B.Sc. With 95 Diagrams. 6s. 6d.

A Handbook of Physics. By W. H. WHITE, M.A., B.Sc., A.R.C.S. With 340 Diagrams. Second Edition. 8s. 6d.

Practical Applied Physics. By H. STANLEY, B.Sc. With 79 Diagrams and Mathematical and other Tables. 5s.

Examples in Elementary Mechanics, Practical, Graphical, and Theoretical. By W. J. DOBBS, M.A. With Answers. 7s. 6d.

The Laws of Mechanics. By SIDNEY H. STELFOX, B.Sc., A.M.I.C.E. With many Diagrams. 6s.

Practical Mechanics. By SIDNEY H. WELLS, C.B.E., Wh.Sc., A.M.I.C.E. With Diagrams, Exercises, and Answers. Seventh Edition. 5s.

Chemistry

Everyday Chemistry. By W. ROBINSON, B.A., B.Sc. With 8 Plates and 25 Diagrams. 3s. 6d.

Elementary Experimental Chemistry. By A. E. DUNSTAN, D.Sc., F.I.C. With Diagrams and Examination Papers. Eighth Edition. 3s.

A Junior Chemistry. By E. A. TYLER, M.A., F.I.C. With 78 Illustrations. Twelfth Edition. 4s.

An Elementary Textbook of Inorganic Chemistry. By R. LLOYD WHITELEY, F.I.C. With Illustrations and Questions. Third Edition. 5s.

Practical Chemistry: Part I. By W. FRENCH, M.A. With Diagrams and Questions. Seventh Edition. 3s.

Practical Chemistry: Part II. By W. FRENCH, M.A., and T. H. BOARDMAN, M.A. With Diagrams and Questions. 3s.

Elementary Chemical Theory. By J. M. WADMORE, M.A. With 16 Diagrams. Second Edition. 5s.

The Complete School Chemistry. By F. M. OLDHAM, M.A. With 125 Diagrams, Questions, and Answers. Eighteenth Edition. 7s. 6d.

From January 1, 1923, the price will be 6s.

A Senior Experimental Chemistry. By A. E. DUNSTAN, D.Sc., F.I.C., and F. B. THOLE, D.Sc. Second Edition. 7s. 6d.

A Textbook of Practical Chemistry. By A. E. DUNSTAN, D.Sc., F.I.C., and F. B. THOLE, D.Sc. Third Edition. 6s. 6d.

A Textbook of Inorganic Chemistry. By GEORGE SENTER, D.Sc., Ph.D., F.I.C. With Problems and Answers. Eighth Edition. 7s. 6d.

Preparations and Exercises in Inorganic Chemistry. By W. LOWSON, B.Sc., F.I.C. 3s. 6d.

An Introduction to Quantitative Analysis. By S. J. M. AULD, D.Sc., Ph.D., F.I.C. With 74 Diagrams. 6s.

A First Year Course of Organic Chemistry. By A. E. DUNSTAN, D.Sc., F.I.C. With Plates and Diagrams. Second Edition. 4s.

A Second Year Course of Organic Chemistry. By F. B. THOLE, D.Sc., F.C.S. With Appendices. 4s. 6d.

A Third Year Course of Organic Chemistry. By T. P. HILDITCH, D.Sc., F.I.C. With Two Indexes. 7s. 6d.

Qualitative Organic Analysis. By F. B. THOLE, D.Sc. 2s. 6d.

Modern Research in Organic Chemistry. By F. G. POPE, D.Sc., F.C.S. Second Edition. 7s. 6d.

Outlines of Physical Chemistry. By GEORGE SENTER, D.Sc., Ph.D. With Problems and Questions. Ninth Edition. 7s. 6d.

Physico-Chemical Calculations. By JOSEPH KNOX, D.Sc. Containing 365 Problems, with Answers and Solutions. Fourth Edition. 4s. 6d.

A Concise History of Chemistry. By T. P. HILDITCH, D.Sc., F.I.C. With Biographical Index and Chronological Summary. Second Edition. 6s.

Higher Mathematics for Chemical Students. By Prof. J. R. PARTINGTON, D.Sc., M.B.E. With 44 Diagrams. Second Edition. 6s.

METHUEN & CO., LTD., 36 Essex Street, LONDON, W.C. 2.

in countries overseas and any aid in this important matter will be welcomed. Pictures and reading material of this nature appear in the October issue of the magazine *Outward Bound* (price 1s. net), and China, Ceylon, India, Africa, and Asia Minor are among the lands into which the various stories take the reader. There is an instructive article on Khama, for the past fifty years a chieftain in Africa south of the equator, who for his work among the Bantu races has been dubbed the negro Cromwell and there is also a useful article on tree-worship in China. Teachers will find the magazine an interesting as well as an instructive adjunct to their work in the class-room.

EDUCATION GRANTS.—The Workers' Educational Association has submitted a statement on the question of State grants for education to the committee on Exchequer Grants, which appears in the November issue of the *Highway*. The committee is of opinion that no formula can be devised which will secure "equality of burden" in respect of expenditure by the State and by local authorities, but that in a service of national character with local administration, such as education, there must be some form of partnership between the State and the local authorities. To this end, it is suggested that the "percentage grant" system be retained with modifications. The modifications would take the form of additional grants to the local authority based upon rateable value and on the number of persons whose educational interests are involved. A safeguard against extravagance is afforded by the limitation of the grant to the approved expenditure of the local authority.

FARRINGTON'S SCHOOL, CHISLEHURST.—Speech Day was celebrated on Friday, November 3, when the Chairman of the Governors, Sir George Hayter Chubb, Bt., who presided, announced the generous gift to the School by the Rt. Hon. T. R. Ferens, of £15,000, or, if necessary, £20,000, to provide an Assembly Hall and Class Rooms. The Chairman expressed the gratitude of the Governors and their intention of raising the additional amount required for a second house of residence, which, with the school buildings so generously given, would complete the original scheme of the Founders. The Head Mistress, Miss A. H. Davies, gave a report on the work and progress of the school, tracing its development since its foundation in 1911. She summarized the examination results of the past years and the academic successes of the old girls, and spoke of the work of the school in music and in art. Referring to the ideals of the school, to which she attributed its success, she said that Farrington stands for a religious conception of education, for the belief that the religious basis is the true one and that the aim of all education is the development of Christian character. Miss Penrose, M.A., Principal of Somerville College, Oxford, then addressed the girls, urging them in their work to cultivate honesty, scholarly ideals, and a sensitive standard of accuracy, and to acquire interests outside their school work.

JAMES ALLEN'S GIRLS' SCHOOL, DULWICH.—The annual distribution of Prizes and Certificates took place on Friday, November 3rd, Sir Jethro Teall, Esq., occupying the chair. The prizes and certificates were distributed by the Right Rev. the Lord Bishop of Southwark, who gave a short address, during the course of which he made reference to the distinguished careers of some of the Old Girls of the school and compared the opportunities open to women at the present day with those of sixty years ago. The very creditable list of pupils' successes includes: 6 Higher School Certificates of the University of London with 2 distinctions and 3 special credits, 17 Matriculation Certificates, 8 General School Certificates, a Senior County Scholarship, an open Scholarship for French and English at Westfield College, and the Martin Holloway Scholarship for Science at the Royal Holloway College.

THE RHONDDA MOTHERCRAFT CHALLENGE SHIELD.—At the Annual Meeting of the National Baby Week Council which was held at 117 Piccadilly, London, W. 1, on October 26, at 3 p.m., an interesting presentation was made to Miss Lily Grant, a pupil of Salter's Hill Elementary School. The presentation took the form of the Rhondda Mothercraft Challenge Shield, which is awarded annually by the Association of Infant Welfare and Maternity Centres to the elementary school submitting the best essay on a Mothercraft question set by the Association. A similar Challenge Shield is offered for competition among Secondary and High Schools and this year it was won by the Girls' County School, Bishop Auckland, for the essay sent in by Miss Marjory Wood.

ORIGIN OF THE CONTINENTS.—Those interested in geography and geology have doubtless been curious to know more of the somewhat heretical theories on the origin of the continents and ocean beds of the world put forward by Wegener and discussed with some vigour at the recent Hull meeting of the British Association. Pending the appearance of an English translation of Wegener's work, the article on the subject by E. R. Roe-Thompson in the October number of the *A.M.A.* will provide much material for speculation. The author even goes the length of suggesting that the outlines and practical part of the hypotheses should be given in schools on the plea that speculations of this nature are more likely to create interest than ascertained facts. The article, however, will be useful as providing a summary of the outstanding features of Wegener's hypothesis of continent formation.

LIBRARY LECTURES.—The Libraries, Museums, and Arts Committee of the Corporation of Liverpool has produced two programmes of winter lectures in the Picton Hall, for adults and children respectively. The programmes cover the four months from November to February inclusive, and that for adults includes some twenty items. Among those still to be given are: experiments on light, colour, and sound; town and regional planning; the conquest of Mount Everest; development and settlement in East Africa; great pictures and the stories they tell; and coal. Among the children's lectures are such subjects as the story of food-stuffs and raw materials, dust, the meaning of beautiful buildings, and the evolution of the world.

NATIONAL INSTITUTE FOR THE BLIND.—We are interested to learn that the third prize of £10, offered by the Italian Chamber of Commerce in a competition between students of the Evening Institutes of the London County Council in London for Italian, has been awarded to Mr. Michael Dodd, who is a blind member of the staff of the National Institute for the Blind. Mr. Dodd has also obtained a second class in Italian at the Royal Society of Arts, Stage 3, advanced. During his preparation for these examinations Mr. Dodd obtained great assistance from books put into Braille by the Manuscript Department of the National Institute.

MENTAL TESTS IN SCHOOL ADMINISTRATION.—In 1919 the Board of Education for Berkeley, California, established a Bureau of Research and Guidance in connexion with its public schools. The Bureau, as its name implies, had a double function: first, to carry out scientific research upon educational problems, and, secondly, to give scientific guidance, both to the education department as a whole, and to individual teachers and parents whose children had become for them a special and perplexing problem. Monograph No. 4, now issued by the Board is the first printed report describing what the Bureau has hitherto achieved. Its opening chapter records quite briefly the results of an analysis of the enrolment, the attendance, the course of promotion, and the size of the classes, in the various Berkeley schools. A short account is also appended of the special classes established in the elementary schools for pupils of inferior ability, and of the school counsellors appointed in the high and junior high schools to advise pupils of superior capacity or special talent. The greater part of the monograph, however, is concerned with the results of an extensive examination of the school children by the means both of individual and of group tests. The figures illustrate the pressing need for a better classification of pupils throughout the educational system. The report concludes by urging that a well-organized programme for mental testing should be an integral part of every school system.

JOURNAL OF PROCEEDINGS OF THE CHILD STUDY SOCIETY.—This is the first number of a new journal which apparently is to be issued annually, and practically takes the place of the old monthly periodical "Child Study," which formed the original organ of the Child Study Association. The present number contains nine papers of educational interest, and, for the most part, of a scientific character. Of these the first two deal with vocational psychology. Dr. Miles, in what is perhaps the most interesting article of the whole series, explains very concisely the problems, the methods, and the value of vocational tests. He urges the need for some central body, first, to co-ordinate the work of psychological research, already commenced in many schools, secondly, to act as a clearing-house for the mass of information which is now being collected, and, thirdly, to assist in the general development and exact standardization of the tests to be used in such inquiries. He hopes that the new

CONVEYANCING DEPARTMENT.

This Department is under the direction of Mr. F. C. NEEDES, B.A., whose experience, advice, and assistance are unreservedly placed at the disposal of Purchasers free of charge.

TRANSFERS and PARTNERSHIPS arranged by correspondence or interview.
INSPECTIONS and VALUATIONS undertaken. FOR SALE (inter alia).

1. To Principals wishing to Remove or to Amalgamate. Excellent opportunity presents itself to any Lady wishing to amalgamate her Connexion with a High Class Girls' School standing in its own Estate of about 100 acres and with every modern convenience. Fees from 50 guineas in the Junior to 70 guineas in the Senior School per term. Full particulars on application.
2. **North Wales, Seaside.**—Flourishing Girls' School, Vendor retiring. 17 Boarders, fees 100 and 105 guineas per annum, and 12 Day pupils, fees 3 to 5 guineas a term, all without extras. Net Fees for 1922, exclusive of extras, £2, 08. Two good houses, facing the sea, communicating, with accommodation, for 21 Boarders, staff, and 4 maids. Rent only £53 each house. Vendor has carried on the school extravagantly but has still made a profit of £300 to £400 a year. Vendor is asking £1,600 for everything save drawing-room furniture and all old oak. Excellent chance of opening a Boys' Preparatory Department. One of Mr. Neeedes' clients is prepared to take over this school in conjunction with another lady.
3. **North London.**—Flourishing Dual School of about 60 pupils. Fees 3 to 5 guineas a term. Receipts about £900. Good premises on valuable lease. Rent £90 p.a. Price asked for goodwill, all school furniture, electric light fittings, &c., £700 cash. Thoroughly bona-fide School. Excellent scope for development of the Boys' Branch.
4. **Near London.**—A high-class Ladies' Boarding School situate in fine premises standing in a well-wooded park amid delightful surroundings. About 32 girls to be handed over at 50 to 60 guineas a term. Receipts about £8,000 p.a. Vendors, retiring will transfer only to a lady capable of carrying on with success this high-class establishment. Goodwill by Capitalisation Fee and Furniture at valuation; £2,000 need only be paid down.
5. **York.**—Flourishing Girls' Boarding and Day School. Ten boarders at about £75 p.a., 33 day pupils. Receipts £1,500. Two good houses. Rent, £100. Goodwill about £550. School and part house furniture at valuation.

For particulars of other Departments apply to the Secretary.

Nearest Stations: South Kensington and Gloucester Road.

National Institute of Psychology, now established under the directorship of Dr. C. S. Myers, F.R.S., may very largely fulfil these requirements. The medical aspect of child study is represented by Dr. Yearsley's "Plea for the Deaf Child," and Dr. Lewin's interesting paper upon the "Hygiene of the Nose." The advantages and disadvantages of "vertical classification" and of the "family group system" are discussed by two Head Mistresses of London elementary schools. Dr. Potts contributes a valuable paper on the treatment of delinquents. The number concludes with a paper upon Phrenology. It is unfortunate that a society, whose object is the scientific study of children, should have published in its journal such unscientific statements as are included in this final paper.

At the recent inaugural meeting of the WEST LONDON GROUP OF THE ENGLISH ASSOCIATION a particularly interesting lecture, on the essentials in English Literature, was given by Mr. John Bailey. The West London Group is the first London decentralized group, established for the purpose of holding lectures and discussions on literary and educational subjects more frequently than the usual big meetings of the Association. All interested, whether intending members of the Group, or visitors, are cordially invited to attend the next meeting. Particulars of the forthcoming meetings will be sent, on receipt of a stamped addressed envelope, by Mr. A. Kirkham Hamilton, 4 Elm Court, Temple, E.C. 4.

MESSRS. GEORGE G. HARRAP & COMPANY, LTD., educational publishers, have removed to more commodious premises at 39-41 Parker Street, Kingsway, London, W.C. 2.

HIGH TRIBUTE was paid to the work of Dr. Rouse by the Earl of Cromer at the Perse School Prize Distribution. Dr. Rouse this term completes twenty-one years' service as head master.

JANUARY VACATION CLASSES IN RHYTHMIC MOVEMENT, for women only, are being arranged by the London School of Dalcroze Eurhythmics. Particulars can be obtained from the Director, 20 Store Street, London, W.C. 1.

HOSPITALS' COMBINED APPEAL.—An exhibition of Scientific Novelties will be held at King's College, Strand, from December 28 to January 10 inclusive. Tickets may be obtained from the Controller, Devonshire House, W. 1, and at any of the University Colleges and Technical Schools.

VOLUNTARY helpers are required in connexion with the St. Dunstan's Carol League's Christmas appeal for funds.

A SPECIAL service for those engaged in religious education will be held on December 4 in St. Paul's Cathedral; the Bishop of Chelmsford will preach.

A LECTURE on auto-suggestion in education will be given by M. Emile Coué at the Steinway Hall on December 1, at 8 p.m.

THE prize for an essay on a school anthology offered by *Poetry* has been divided between Mrs. Woodfield, of Elkstone School, Gloucestershire, and Miss H. M. Simpson, of Leeds High School. The selected anthology will be published shortly by Mr. Basil Blackwell, Oxford.

PRIZE COMPETITIONS.

The prize for the November Competition is awarded to "C. M. I.," and the second place to "Menevia."

The second prize-winner of the Summer Competition is Miss M. L. Hall, Higher Tranmere High School for Girls, Devonshire Park, Birkenhead.

The winner of the October Competition is the Rev. H. J. Chaytor, St. Catharine's College, Cambridge.

SENTENCES FROM FRENCH AUTHORS.

By "C. M. I."

1. It is the instinct of women in all countries to call artifice to the aid of nature. . . . Not content that God has made them beautiful, they make themselves fascinating. HUGO.

2. The splendid recklessness of twenty, contempt for the

whole world, the all-absorbing passion of the thing that is to be, freed from human infirmities, set like a sun in the heavens. ZOLA.

3. Be ready to die of hunger; this is the greatest of all arts, since by it comes freedom of the soul. MICHELET.

4. The peal which is about to sound is a signal, not of danger, but for a charge; a charge upon the enemies of our country. To overthrow them we shall need daring, once, and again and always—daring! And France is saved. DANTON.

5. I know that no truly great man has ever believed himself great; and that he who plucks the flower of his own glory during life, will not taste the fruit of it after death. RENAN.

6. The industrial aristocracy, like the ancient nobility which it has replaced, will have its day of reckoning. ANATOLE FRANCE.

7. How define a gentleman? One whose blended virtues, religious, social, and domestic, breathe refinement. ROUX.

8. A fool with a good memory has abundance of ideas and facts; but he knows not how to apply them; everything hangs by this. VAUVENARGUES.

9. Scoffing is born of self-satisfied disdain. VAUVENARGUES.

10. He alone is worthy to be listened to, with whom speech always expresses his thoughts, and his thoughts truth and virtue. FÉNELON.

11. Pity is often sympathy for our own troubles reflected in those of our neighbours; an acute apprehension of the misfortunes which may befall us. LA ROCHEFOUCAULD.

12. Our political history of the last hundred and twenty years may be summed up in this irreducible, paralysing, and barren paradox; a perfectly free, happy, and contented individual, placed in a state where power and authority are supreme. MAURICE CAUDEL.

13. The Labour members who get into Parliament quickly become "middle-class," in the bad sense of the word; they lose their former vigour and energy, and only preserve a kind of platform sentimentality. JEAN JAURÈS.

BY THE PRIZE EDITOR.

1. In all countries it is the instinct of women to add art to nature. . . . It is not enough for them that God has made them beautiful; they make themselves charming.

2. The noble madness of youth, the contempt for the world and all that is in it, the absorption in one passion—the passion for the Work, that is freed from human weaknesses, and set above our heads like the sun in the heavens.

3. Learn how to die of hunger; it is the greatest of all accomplishments, because it makes your souls free.

4. The tocsin which is about to ring is not an alarm-bell; rather it will sound the charge upon the enemies of our country. To vanquish them audacity is the first thing we need, audacity is the second thing, audacity is the third thing. So France will be saved.

5. I know that no really great man ever thought himself a great man, and that, if one nibbles one's glory in the leaf during one's lifetime, one will not gather it in ears after one's death.

6. To the great capitalists, as to the old nobility, whose place they are taking, will come a night of the Fourth of August.

7. What is a gentleman? A man who possesses an assemblage of religious, domestic, and social virtues, sweetened by delicacy of feeling.

8. The dull fellow who has a strong memory possesses an abundance both of ideas and information; but he cannot draw inferences from them; and everything depends on that.

9. Raillery has its source in a pleasing sense of one's own superiority. (More freely, "The man who makes fun of others is the man who has a pleasing sense of his own superiority to them.")

10. That man is worth listening to who uses words only to express thought, and his powers of thought only to aid truth and virtue.

11. Pity is often a feeling for our own troubles, as seen in the troubles of others. It is a knowing anticipation of the misfortunes which may befall us.

12. One paradox, inflexible, enervating and barren, sums up our political history during the last hundred and twenty years—how in a state that is pervasive, omnipotent, and dictatorial, to find a place for an individual that is free, happy, and satisfied.

13. The workmen who reach Parliament become quickly middle-class in the worst sense of the word; they lose their sap and primitive vigour, and have nothing left but a kind of rhetorical sentimentality.

(Continued on page 784.)

The "IDEAL" Folding Scholar's Sloped Desk or Flat Table.

By a very simple but ingenious arrangement this useful article can be arranged sloping as a DESK or flat as a TABLE. Folds for storage in small space when not in use. When open in use a convenient Book Trough is formed underneath.

No. 1810.—Open for use (sloped).

Espérance, Leander, Cigale, M. H. G., Midlands, G. H., Rip
van Winkle, A. B. C., Coppertop, B. R. B., Joanne, H. G. T.,
Angus.

Class IV.—Little, Lehte, Pat, 1999.

*A Prize of Two Guineas is offered for the best translation
of the following poem by de la Motte Fouqué.*

An dem jungen Morgenhimmel
Steht die reine Sonne klar,
Aber Blut quillt auf der Wiese,
Und ein Ross, des Reiters bar,
Trabt verschüchtert in der Runde,
Starr steht eine reis'ge Schaar.
Mohrenkönig, bist erschlagen
Von dem tapfern Brüderpaar,
Das Dein kühnes Räuberwagniss
Nahm im grünen Forste wahr!
Donna Clara kniet beim Leichnam,
Aufgelöst ihr goldnes Haar,
Sonder Scheue nun bekennd,
Wie ihr lieb der Todte war.
Brüder bitten, Priester lehren,
Eins nur bleibt ihr offenbar.
Sonne geht, und Sterne kommen,
Auf und nieder schwebt der Aar,
Alles auf der Welt ist Wandel,
Sie allein unwandelbar.
Endlich bau'n die treuen Brüder
Dort Kapell' ihr und Altar;
Betend nun verrinnt ihr Leben
Tag für Tag und Jahr für Jahr,
Bringt verhauchend sich als Opfer
Für des Liebsten Seele dar.

*Initials or a nom de guerre must be adopted by ALL
competitors, but the prize-winners and the competitors
awarded the second place will be required to send real names
for publication if necessary.*

*No competitor will be awarded a prize more than
ONCE during a given year, though the name of the com-
petitor gaining the first place will be published each
month.*

*All Competitions must reach the Office by the first post on
December 11, addressed "Prize Editor," THE JOURNAL OF
EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway,
London, E.C. 4.*

Special Christmas Prize Competition.

A Prize of One Guinea is offered by the Editor of
 The University Correspondent,

Burlington House, Cambridge, for the best original collection of twelve "Howlers," or Schoolboy blunders, which will appear in the issue of January 1st, 1923. Every collection of twelve "Howlers" must be in a separate envelope, and must bear the words "Howlers Prize Competition" on the outside of the envelope.

Entries must reach the Prize Editor, Burlington House, Cambridge, not later than December 16th.

An Obstacle to Latin

One obstacle is expense, and it often appears insurmountable. Latin would be included in the curriculum, if funds were available to purchase an adequate supply of text-books. In reality the obstacle is not insurmountable. FOYLES, the Booksellers, have an immense stock of standard Latin Primers, Grammars, Text-books of Composition, and Classics, which they are prepared to supply to Schools at very low prices. The copies are second-hand, but in good condition. Whenever faced by the obstacle of insufficient funds Principals and Heads should send to FOYLES for quotations for the books required.

FOYLES, 121 Charing Cross Rd., London

INDEX

Subscribers and The Trade

Rent of two houses combined, containing 13 bedrooms, 4 classrooms, 3 sitting rooms, dining room, 3 cloakrooms, kitchens, &c., held on a yearly tenancy, £100. The houses are close to the sea, with good open views. Price for goodwill, about £550. School furniture and most of household furniture at valuation.—No. 7,356.

SUSSEX (SEASIDE).—Transfer of Partnership in old-established Boarding and Day School for Girls.—Gross receipts about £3,000. Number of boarders, 39, fees up to £60 per annum. Number of day pupils, 31, fees up to 7½ guineas a term. Rent of good house, facing the sea, £105. Price of goodwill to be arranged. Furniture at valuation.—No. 7,341.

GLOS.—Partnership with view to Succession (Girls' Boarding and Day School).—Established and conducted by vendors 20 years. Gross receipts about £1,000. There are 11 boarders; terms, £50 to £60; and 33 day pupils at nearly all 3 guineas; 4 day boarders 6 guineas. Rent, £40. House stands in one acre of ground. A lady looked for who must be qualified and willing to pay £500 for one-third share, or £1,500 for goodwill and school furniture.—No. 7,348.

LONDON, S.W.—Girls' Boarding and Day School.—Established 60 years and conducted by vendor 45 years. Gross receipts past year over £2,000. Rent of detached double-fronted house, containing 14 rooms, £50. 6 boarders paying about 60 guineas a year and about 40 day pupils paying from £3 3s. a term. One term's fees would be accepted by way of goodwill; school and some household furniture at valuation.—No. 7,383.

SALOP.—Partnership in Girls' Boarding and Day School.—Established about 24 years. Number of boarders 22, paying an average fee of about 16 guineas a term and 18 day pupils paying about £10 a year. There are some extras. The houses are the property of the vendor but she is willing to let them to the partnership for the very low rent of £100 per annum—there are two houses with a beautiful garden. A Churchwoman and a lady willing to teach desired. Our client states she has just bought new furniture for the school. She is asking about £600 for half share of the goodwill and furniture.—No. 7,370.

SUSSEX.—Day School. There are 35 pupils paying £2 5s. a term. Rent of house, £35. Price for goodwill, school, desks, new line in house, gas fires, lights all new, also piano, about £250. Vendor states there is no opposition.—No. 7,369.

HANTS (SEASIDE).—Day School for Girls. With accommodation for boarders. The vendor only opened this school in January, 1921, and has now 25 pupils bringing in about £105 a term. Rent of commodious house held on lease, £80. Price for goodwill and furniture in three school rooms, including piano, this in good condition, £200 to £250. The school has very good prospects.—No. 7,380.

LONDON, S.W.—High School for Girls (Boarding and Day), with a Kindergarten Department where boys and girls are received from 7 to 9 years of age. There are over 50 pupils at present including 8 boarders. Gross receipts for last year about £750. Vendor states that the premises are specially adapted for tuition purposes. The classrooms are large and airy and the drainage and ventilation perfect. We understand that the landlady would let the house at a reduced rental of £110 on condition that she might reserve a

bedroom that she could occupy when she comes to town, which is very seldom. Vendor is asking about £250 for goodwill. There is also some school furniture, gymnasium apparatus, bedroom furniture, and two pianos which would be sold at valuation. The fees according to the prospectus are 2 to 3 guineas a term for day pupils and 40 to 60 guineas per annum for boarders. There are several extras in addition to the fees named.—No. 7,368.

DORSET (SEASIDE).—Girls' Boarding School with few Day Pupils. Established and conducted by vendor 8 years. Gross receipts for 1921 were £1,234. 1922, £1,236. Number of boarders 24 paying from £40 to £60 per annum and 5 day pupils paying £3 3s. a term. Rent of very nice detached double-fronted house, close to station and sea, containing 11 bedrooms, 3 reception rooms, also nice airy school room, kitchen, scullery, and usual offices, nice garden with tennis lawn £100 a year on repairing lease or £200 non-repairing lease. Goodwill about £500. School furniture, which is very good, at valuation. Also some household furniture if desired. We have personally inspected the property and have no hesitation in thoroughly recommending same.—No. 7,381.

YORKSH RE.—Partnership in High-class Boarding and Day School for Girls. Established 24 years and conducted by present Principal 2 years. Gross receipts for past year, £3,200. There are 18 boarders at 30 to 35 guineas a term and extras; 27 day pupils from £6 to £10 a term. Rent of house standing in its own grounds on the moors, stone built, £275. Held on 7 years lease to September, 1927, and renewable for a further period if desired. Our client states that she paid £800 for the furniture when she purchased the school and has since spent a further £750. Our client offers either a quarter share (including furniture) for about £400 or a proportionate amount for a half share. The school is recognized by the Board of Education. We advise immediate treaty.—No. 7,375.

DORSET.—Girls' Boarding and Day School. Established many years and conducted by vendors 9 years. Gross receipts past year, £1,340 10s. Number of boarders 8, paying an average fee of £50 a year and 32 day pupils paying from £3 15s. to £12 12s. a year without extras. Rent of 2 large houses, intercommunicating, situated in best part of town, 3 minutes from sea; containing 19 bedrooms, large drawing room, dining hall, dining room, 4 school rooms, 1 classroom, 3 other sitting rooms, 2 bath rooms, kitchens, cloak rooms, &c., £75. Price for goodwill, school, and most of household furniture about £1,500.—No. 7,378.

Full particulars of above and other Schools, free of charge, on application.

Messrs. GRIFFITHS, POWELL & SMITH will be pleased to advise, free of charge, any Principal wishing to dispose of a School or take a partner in same. The Transfer Department is under the direct management of the Head of the Firm. All communications received in strict confidence.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C. 4.
AND AT GLASGOW AND BOMBAY.

Supplement to
THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

No. 641.

DECEMBER 1, 1922.

Cambridge University Press

THE CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES

General Editors: A. F. KIRKPATRICK, D.D., and R. ST JOHN PARRY, D.D. The Old and New Testaments, complete in 60 volumes. With Introductions, Notes, and Maps. Fcap 8vo. Prices from 2s 3d.

"A series which has done more to spread accurate Biblical knowledge among English-speaking people than any book except the Revised Version."—*The Times*.

THE SMALLER CAMBRIDGE BIBLE FOR SCHOOLS

14 Volumes. With Introductions, Notes, and Maps.
Fcap 8vo. 2s each.

THE REVISED VERSION FOR SCHOOLS

General Editor: A. H. MCNEILE, D.D. 23 Volumes.
With Introductions, Notes, and Maps. Fcap 8vo. From
2s 6d each.

Full Lists, with prices, on application.

A COMPANION TO BIBLICAL STUDIES

A revised and rewritten edition of *The Cambridge Companion to the Bible*. Edited by W. E. BARNES, D.D. With 8 illustrations and 10 maps. Royal 8vo. 27s 6d net.

Stories of the Victorian Writers.

By Mrs HUGH WALKER. With 8 illustrations. Crown 8vo. 5s net. School edition, 3s 6d.

The aim of this little volume is to induce those readers—whether young or old—who are not already familiar with the great Victorians to seek at least a bowing acquaintance with them and their works.

"A charmingly produced and well illustrated little book, packed with interesting anecdotes."—*The Cambridge Review*.

English Verse: Old and New. An

Anthology. Edited by G. C. F. MEAD, M.A., and R. C. CLIFT, B.A., *Masters at Aldenham School*. Fcap 8vo. 6s net. School edition, 4s 6d.

An anthology, in which the old and the new are boldly associated on an original plan, based on a conviction that there is need for a collection of poems of direct appeal, drawn from ancient as well as modern sources, between the covers of a single book.

Lycurgus. *The Speech against Leocrates*. Edited by A. PETRIE, M.A. Fcap 8vo. 5s 6d. Pitt Press Series.

The *Leocrates* of Lycurgus forms, in many ways, an excellent introduction to Attic oratory for younger students. It is easier than Demosthenes, and there is no complex political situation to expound: the issue is simple and direct. And it has a greater variety of interest than either Demosthenes or Lysias.

Supplement to "A Manual of French Composition."

By R. L. G. RITCHIE, M.A., and J. M. MOORE, M.A. Demy 8vo. 6s net.

This *Supplement* to the *Manual* is intended to meet the wants of teachers who have worked through the *Passages for Translation*. The two hundred additional pieces here printed have been selected on the same principles as those in the *Manual*, and are arranged in the same way.

Sir Thomas Browne: Religio Medici.

Edited by W. MURISON, M.A. With Introduction and Notes. Fcap 8vo. 4s 6d. Pitt Press Series.

Sir Thomas Browne: Hydriotaphia.

By the same Editor. With Introduction and Notes. Fcap 8vo. 3s 6d. Pitt Press Series.

The editor has had three aims especially in view: first, to make clear Browne's numerous Biblical and classical allusions and quotations to a century less familiar than Browne's was with the Bible and with Greek and Roman authors; next to illustrate "*Religio Medici*" and "*Hydriotaphia*" by means of passages from Browne's other works; and to explain as precisely as possible strange words and phrases.

Cambridge Plain Texts: English. Pott

8vo. 1s 3d each. **Bacon**: *The Advancement of Learning*, Book I. **Carlyle**: *The Present Time*. **Donne**: *Sermons XV and LXVI*. **Fuller**: *The Holy State* (II, 1-15). **Goldsmith**: *The Good Natur'd Man*. **Hooker**: *Preface to the Laws of Ecclesiastical Polity*. **Johnson**: *Papers from "The Idler"*. **Montaigne**: *Five Essays*, translated by John Florio.

"In their well-designed paper covers, with their admirable print, the little books do credit to the great Press which is responsible for them."
—*Notes and Queries*.

Papers set in the Mathematical Tripos, Part I, in the University of Cambridge,

1918-22. 3s net.

REVIEWS AND MINOR NOTICES.

HUMAN HISTORY—A PSYCHOLOGICAL EQUILIBRATION

Studies in the Theory of Human Society. By Dr. FRANKLIN H. GIDDINGS. (14s. net. Macmillan.)

The plan of the book is to give an historical account of the subject, followed by an analysis of the different problems, and concluding with a short synthetic treatment. Dr. Giddings is not content with the ordinary views of the nature of history, and enunciates a theory of his own. Basing on the view that activity results from the storing and degrading of energy, he concludes that "human history is a psychological, or behaviouristic, equilibration." At the end of his chapter he puts the matter more picturesquely: "History is adventure, and the urge to adventure is the cause of history." Our knowledge of the origin and functioning of social systems, he maintains, is not so much history as scientific induction. Yet he proceeds to give a very pleasantly historical presentation of these inductions in a sort of retrospective day dream. His practical attitude towards the problems of society may be gathered from this pronouncement: "The whole world at present is intellectually muddled and morally bedevilled. It is trying to reconstruct society upon a hypothetical equality of all mankind. If it succeeds, it will destroy historic achievement from the beginning, and will send mankind to perdition." Certainly a strong statement, but the rest of the book goes far to justify it. Obviously there is here a danger that the philosophic historian may be confounded with the partisan politician. Certainly belligerent party men will find in these pages many detached passages that can be put to controversial use, but in their context they are thoroughly justifiable, and the author maintains his sense of perspective throughout.

In the actual analysis, Dr. Giddings seeks to reach a more detailed explanation of the workings of the group mind than is supplied by Mr. Macdougall. In this connexion it is pleasing to note that Walter Bagehot's "Physics and Politics" gets the recognition that it deserves, but has hitherto not received. It was one of those pioneer books that are apt to be overshadowed by those that follow: in this case Tarde's big book. It is disappointing however to find that Mr. Graham Wallas's work is neglected. The contribution of "The Great Society" has not yet been assimilated as part of the common stock of the subject.

It is interesting to note how the heterogeneity of the population of the United States has influenced Dr. Giddings's mode of presentation. It is right that this should be so, for the treatment of an actual problem is the very best way to illustrate a given thesis. The book provides definite help to the Americans in facing their special difficulties, and at the same time throws many useful sidelights on the problems of the more homogeneous nations. Dr. Giddings does well in giving a chapter on the costs of progress, since "all progress is conditioned by cost," though not all his readers will accept his view that "the cost will increase with the progress." At all events we all accept with satisfaction the assurance that "all in all, industrial history discloses a progressive diminution of the proportion of inevitable suffering mixed with the gains of progress," even if "the absolute increase remains."

The synthetic part consists of two chapters, one on Pluralistic Behaviour, the other on Further Inquiries on Sociology. In the first we have a vigorous account of the dynamics of pluralistic struggle, the various pressures exerted by circumstances and by human beings. A striking view of the matter is that in our social relations we are all actors. "In the presence of fellow-beings action becomes acting," but there is no reproach implied by the term. *Mores, themistes, protocracy*, are terms that help Dr. Giddings in his theories of the organization of social activities. But he feels that there is much yet to be explained, and in

his final chapter he sets out thirty questions that are at present waiting answers from the sociologist. This forms a fitting end to an intensely interesting and suggestive treatment of a subject of vital interest.

EARLY MIDDLE ENGLISH POETRY.

The Owl and the Nightingale. Edited with Introduction, Texts, Notes, Translation, and Glossary, by Prof. J. W. H. ATKINS. (16s. net. Cambridge University Press.)

The Early Middle English Period, which stretches from about 1150 to 1350, is poor in works of great literary merit, and such as exist have, owing to their fewness and their importance in other respects, received praise to which their artistic qualities have no genuine right. Perhaps the best-known product of the period is "The Owl and the Nightingale," a debate poem in 897 short couplets; it has come down to us in (i.) The Cotton MS. (C, thirteenth century) in the British Museum, and (ii.) The Jesus College MS. (J, late thirteenth century) in the Bodleian Library. J, though younger than C, is not a copy of it, but both are copies of a copy of the original text. "The Owl and the Nightingale" has long had an attraction for scholars, and within recent years two exhaustive and scholarly editions have been published, *viz.* those of Gadow in Germany, and Wells in the U.S.A. We have now this fresh edition by Prof. Atkins, who, profiting by the work of his predecessors and adding the results of his own long researches, has embodied in his book all that can for the time being be said on the poem. The book consists of a long introduction, an accurate reproduction of the two texts, foot-notes, a prose translation, appendices, and a glossary. By far the best-written sections of the introduction are those dealing with the MSS. and the texts. In these sections Prof. Atkins's handling of the various problems involved is in method, thoroughness, and lucidity, altogether admirable. He is not so successful in the other sections of the introduction: that on "The Historical Setting of the Poem" contains obscure and vague statements. Neither is he convincing in the section on "The Author"; though he does not go beyond saying that "Nicholas of Guildford must at least be said to hold the field," we do not think the arguments he advances in favour of Nicholas justify even this judgment. The section on "The Poem as Literature" displays more enthusiasm than just appreciation; the merits of the poem are excessively praised, and its defects and crudities are so completely ignored that one unacquainted with it would probably conclude that it is one of the masterpieces of literature. As a matter of fact, it contains little that can truly be rated as poetry, and while the arguments of the debaters display considerable resource and are marshalled with much skill, yet any one who sees the higher forms of art in these qualities is easily pleased. The foot-notes are full and illuminative, and exhibit wide and critical reading, and the translation is accurate and readable.

THE MATERIALIZATION OF ENERGY.

Philosophy and the New Physics: An Essay on the Relativity Theory and the Theory of Quanta. By Prof. L. ROUGIER. Authorized translation by Prof. M. MASIUS. (6s. net. Routledge.)

Exceptional importance must be attached to the volume by Prof. Rougier on the Materialization of Energy which has been translated by Prof. Masius under the more general title "Philosophy and the New Physics." Here we have presented in convenient form a summary of the most important theoretical work on matter and energy which has appeared in various scientific publications during the past few years. As the translator remarks in his preface, Prof. Rougier's very wide reading in mathematical and experimental Physics has enabled him to present and interpret the new advances in Physics in a way which should prove of great interest to both philosopher and physicist.

The present reviewer must confess that he read the Introduction with a certain amount of impatience arising from the somewhat summary way in which the author here states his main thesis. It seemed as if a specious account of the main facts of physics were being given by ignoring all the outstanding difficulties. But on reading further he found more and more to admire in the way in which Prof. Rougier marshals his arguments, and finished the volume in general agreement with the position therein adopted, realizing that it is not possible to deal with all debatable questions in the limited space of 160 pages.

The older dualistic doctrine of the universe distinguished between matter and energy. "The world where we live is in reality a double world, or rather it consists of two distinct worlds, one of which is the world of matter, the other the world of energy. Copper, iron, carbon, that is the world of matter. Mechanical work, heat, these are forms of energy. Each of these two worlds is governed by a law of conservation. Matter cannot be created nor destroyed; energy cannot be created nor destroyed" (Paul Janet). This dualism led to insurmountable difficulties. The monistic attempts to reduce one of the terms of the antithesis to the other merely served to shift the difficulty without relieving it, and Ostwald's energetics merely to escape the problem without solving it. Recent discoveries have shown that the antithesis between matter and energy was artificial, and that these two realities, in spite of differences which forbid their confusion, possess precisely the common characteristics that permit the explanation of their mutual action. Energy is endowed with inertia, and weight in proportion thereto. The mass of a body is not invariable; it increases or it decreases according as the body absorbs or radiates energy, and as it is in motion or at rest with respect to the system to which it is referred. The mass of a body measures its internal energy. This internal energy is relatively enormous. The changes of mass that result from the presence or absence of heat or kinetic energy or the presence of radiation within a body are practically imperceptible, except in the case of radio-active transformations.

Planck's Quantum Theory seems to suggest that the structure of energy in all its forms may be discontinuous, so that radiation may, as suggested by Einstein, have a discontinuous structure. If we adopt these ideas we must assume the discontinuity not only of matter and of electricity, but of radiant energy and of exchanges of energy. "Contrary to the ancient adage *natura non facit saltus*, it becomes apparent that the universe varies by sudden jumps and not by imperceptible degrees."

To sum up in the words of Prof. Rougier: "The ancient dualism of the ponderable and the imponderable, of matter and energy, becomes transformed into one of energy stabilized in material structures of definite architecture and free radiation, both of these modes of energy being endowed equally with inertia, weight in proportion thereto, and structure. This may then be called the materialization of energy."

CLASSICS.

Paulatin: A Graduated Translation and Composition Book Based on The Syntax of the Latin Complex Sentence. By P. H. REANEY. (4s. Russell.)

Among the efforts to make the teaching of Latin both sound and interesting this well thought out and carefully arranged book of Mr. Reaney's deserves to take a high place. Assuming the pupil's knowledge of Accidence, the author has set himself the task of bridging over the familiar gulf between the Latin primer and the Latin author. He has rightly recognized that the two great difficulties boys find in this transition are, first, the varied constructions that meet them on every page, and, second, the sorting out of the various parts of the period and the turning of the Latin into idiomatic English. The method employed is briefly (a) the grouping together of short Latin sentences which illustrate a certain rule of syntax; (b) the deduction of the rule from the examples furnished; (c) the further illustration of the rule in longer passages from a wide

range of authors for translation into English and, finally, (d) the application of the rule in the translation of English sentences of graduated difficulty into Latin. It will be observed that this sound method, which must commend itself to every experienced teacher, has the advantage of satisfying the recent recommendations of the Prime Minister's committee on the position of classics in Education. Page 189. The date of the second Punic War is given as 218-204 B.C. The usual chronology is 218-202 B.C. Page 203 "venturum" in the first example is evidently a slip for "venturus." Any teacher who is willing to follow Mr. Reaney's advice and spend the time he suggests on the mastery of the complex sentence will assuredly find his reward, when the time comes for tackling the Latin author, in a rate of progress which will preserve interest in the subject-matter and allow of some appreciation of literary style—two important educational elements that premature attempts on a Latin author may destroy. We cordially commend this thorough, scholarly, and interesting piece of work.

The Works of Aristotle translated into English. De Caelo. By J. L. STOCKS. *De Generatione et Corruptione.* By Prof. H. H. JOACHIM. (10s. net. Clarendon Press.)

We welcome this further instalment of the Oxford translation of Aristotle. Five out of the eleven volumes have already been published, under the general editorship of Mr. W. D. Ross, and the whole promises to be a worthy monument to the memory of Jowett, by whose bequest, we understand, the work is being done. The work of the present translators is well up to the standard of their predecessors in the series. Mr. Stocks is already well known as an Aristotelean scholar, and Prof. Joachim has recently published a revised text and commentary of the treatise of which he here offers an English translation.

EDUCATION.

(i.) *Ajuntament de Barcelona. Assessoria tècnica de la Comissió de Cultura. Les construccions escolars de Barcelona: Recull dels estudis, projectes i altres antecedents que existeixen en l'Ajuntament per la solució d'aquest problema. II Edició.* (Barcelona: Henrich i Co.).

(ii.) *Municipalité de Barcelone. Commission de Culture. Rapports de l'Institut d'anormaux de Vilajoana présenté au Congrès d'Hygiène mentale de Paris.* (Barcelona: Henrich et Cie.).

Barcelona is a great centre of intelligence in Spain. In the domain of higher education it cultivates fruitful relations with France. At Barcelona is an industrial university, and Barcelona publishes the "Quaderns d'Estudi de la Mancomunitat de Catalunya," with "Butlletí dels Mestres" as a useful pedagogic supplement, (i) the first of the two books before us throws light on its activity in the building of schools. Again and again we have deplored the combination of factory and jail—symbolic of Routine and Constraint—in which English architects are wont to embody their ideal of a school; a study of "Les construccions escolars de Barcelona" will convince them that school architecture has other lamps, and that the house of education may be made aesthetically attractive. The plans and elevations supplied will be servicable to practical men. From (ii.) we learn what measures the Comisión de Cultura has taken at Barcelona to aid the young of low intelligence and those abnormal children, called by the Italians *delinquenti* or *traviati*, who have vicious, anti-social instincts. From 1918 the School of the Blind and of the Deaf and Dumb had a section for the abnormal; this, transformed into an independent school, has been quartered since 1920 at Vilajoana, on a wooded estate twenty minutes' journey from the middle of Barcelona. Here, as half-boarders, amid healthy surroundings, the mentally deficient are studied and cared for. The Vilajoana Institution is a true clinic: it is under the direction of a *psychiatre* and has a Laboratory of Studies and Research, in which, alike from the anthropological, psychological, and medical point of view, the child is scientifically observed and analysed, then rationally treated. Of the method pursued we will say only this: it is good to see Barcelona knows that to study the deviations of the mind is a means of discovering the laws under which it normally operates. Men once exterminated the unfit; to-day we are reading them as lesson-books.

Modern Developments in Educational Practice. By Prof. J. ADAMS. (6s. net. University of London Press.)

In one sense this book is of the kind which has been called the despair of the reviewer. In the dozen chapters of which the book consists, Prof. Adams discusses in turn each of the main constituents of the "forward movement" in modern education. We thus have a collection of topics whose chief, if not only, bond of union is their up-to-dateness. Attempts to

measure intelligence and attainments, the psychology of the class or group, the doom of class-teaching as sounded from far-off Dalton, the "Gary contribution," the play way, the project method, psycho-analysis, and free discipline—these are among the items that figure in the comprehensive bill of fare provided. The name of the distinguished author is a sufficient guarantee that the various subjects are treated in a manner which will commend itself to teachers who want a sane and impartial view of the latest new things pertaining to their calling. Prof. Adams is eminently able to discern the wheat amid the chaff, and to suggest to teachers what valuable ideas remain when the necessary deductions have been made from the claims of enthusiasts. This book is not the least of many great services he has rendered to the profession.

ENGLISH.

English Reading Made Easy by Means of a System of Marks Applied to the Ordinary Spelling. By Prof. W. A. CRAIGIE. (2s. 6d. net. Clarendon Press.)

Until such time as a phonetic, or even partially phonetic—logically constructed—system is accepted, any means of facilitating the mastery of our ordinary spelling deserves a fair trial. The method here employed, an extension of one already in use in pronouncing dictionaries, is that of adding signs to those letters used to represent more than one sound. For instance, hard g in *get* is unmarked, but the soft sound of the letter in *gem* is indicated thus: *gem*. The method is simple, consistent, and likely to be effectual, but in closely-printed passages the added signs undoubtedly make reading more trying to the eyes—a matter of serious consideration where young children are concerned. For the foreigner, especially the foreign teacher of English, for whom it appears to be mainly intended, such a work must prove a real boon, and he would be grateful, too, for the curious information contained in the last three sections: Weights and Measures; Measures of Length; and Money.

English Exercises. By J. H. FOWLER. Supplementary Exercises to Part I. By R. W. JEPSON. (2s. 6d. net. Macmillan.)

This is the response to a demand for an additional, alternative set of exercises to "English Exercises, Part I," by J. H. Fowler, who himself furnishes a preface. The pieces chosen seem as suitable, and the class-work suggested as useful as those of the original work already noticed in these columns.

The Story of Saint Elizabeth of Hungary. By W. CANTON. (2s. 6d. net. Harrap.)

Teachers seeking wider culture for their pupils through their class-reading will be glad to meet with this latest addition to the "Told through the Ages" Series. The story, beautifully and poetically related by William Canton, suggests much that is quite foreign to the usual school routine in matter and thought and is therefore to be warmly welcomed.

A Practical Training in English. By H. A. KELLOW. New and Revised Edition. (3s. 6d. Harrap.)

Now that the importance of a training in English is generally admitted, a book like this, which is intended for those who have already received a grounding in English, will be very useful, especially in secondary schools. The attempt to teach literary appreciation—always a difficult task—by an intensive study of a number of poems is admirable. Whilst, however, a knowledge of prosody, scansion, and possibly figures of speech, must be derived from poetry, it would seem preferable that such subjects as derivations, analysis, exercises in construction and composition, should, as a rule, be based on prose; partly because the manner of poetry is often remote from ordinary language, and partly because continued treatment of poetry in this way is apt to spoil that very appreciation of its charm which is, after all, the chief object of a study of poetry. Derivations appear to occupy rather too large a space. For those who learn Latin, an occasional lesson will be sufficient to draw attention to important Latin roots; while Old English needs a special study which should certainly be left to an Advanced Course, if not later still.

GEOGRAPHY.

Chambers's Concise Geography of the World. New Edition. (2s. 6d. Chambers.) *Chambers's New Geography of the World.* (2s. Chambers.)

These geographies, to which no author's name is attached, belong to the old-fashioned type of text-book. In both books the political division is taken as the unit, and the chapters consist chiefly of lists of place-names under such headings as Capes, Islands, Lakes, Towns, and Counties. No attempt is made to show cause and effect, nor the correlation of one distribution with another.

The Scope of School Geography. By Dr. R. N. RUDMOSE BROWN, O. J. R. HOWARTH, and J. MCFARLANE. (5s. 6d. net. Clarendon Press.)

The writers of this useful book have performed a great service to the cause of geographical teaching in stating so fully and thoroughly the scope of this important subject. Each branch of the subject is reviewed in turn and the conclusions arrived at are always based on well reasoned arguments. The authors do not pretend to speak with authority (they admit that there are alternative opinions) but from the point of view of geographers they urgently desire to place school geography on an equal footing with other subjects whose definition has become more clearly established by practice. All teachers of geography in secondary schools are strongly recommended to read this book, and students in training colleges should also include it in their course of study.

The New World: Problems in Political Geography. By Dr. I. BOWMAN. (21s. net. Harrap.)

This volume, written by the Director of the American Geographical Society of New York, is a valuable addition to the various post-war publications. The title of the book, "The New World," is not used in its time-honoured sense of "the Americas," but it is used to mean the world of to-day under the changed conditions due to the war. In some six hundred pages the writer presents us with a vast amount of information clearly stated and well arranged. He deals with those problems in Political Geography which have been brought into existence by the Peace Treaties. With regard to many debateable problems he wisely states the facts on both sides and leaves the reader to form his own opinion. In the first twenty-four chapters the countries of Europe are described with special reference to the new boundaries and political questions, and in the remaining ten chapters the changes in Asia, Africa, and the Pacific are discussed. There are many picture illustrations and more than two hundred clearly printed maps to explain the territorial changes in different parts of the world.

HISTORY.

The Foundations of Japan: Notes Made During Journeys of 6,000 Miles in the Rural Districts as a Basis for a Sounder Knowledge of the Japanese People. By J. W. ROBERTSON SCOTT. (24s. net. Murray.)

The Land of the Rising Sun, says the well-known author of this book, has been fortunate in the quality of the literature written about it by foreigners. To that literature he makes a distinctive contribution, for his book probably offers a picture of some aspects of modern Japan to be found nowhere else. He has gone in and out among the people in the rural districts during his four years' residence in the country, and he has conversed with all sorts and conditions, not only about agricultural economy, but about life, religion, morality, education, and the path Japan is pursuing. There is little here about "the victorious Japanese army and navy, the smoking chimneys of Osaka, the pushing mercantile marine, the parliamentary and administrative developments of Tokio, and a costly world-wide diplomacy." All this outward show is borne on the backs of the agricultural peasantry, who constitute the "foundations of Japan," and whose lives and ways are the subject of this book. The author is surely right in thinking that there is room for at least one book written in the perspective of village and hamlet. The general reader will be reminded of Cobbett's "Rural Rides" of a century ago; and the teacher who has to deal with Japan will find, both in the interesting descriptions and in the profuse illustrations, the means of a true understanding of Japanese civilization.

The Second Empire: Bonapartism; The Prince; The President; The Emperor. By P. GUEDALLA. (16s. net. Constable.)

This is an extremely picturesque book, full of atmospheric effects. It is made up of a series of scenes vividly conceived and brilliantly expressed by means of which, as in a succession of dissolving views, the fortunes of the House of Bonaparte are depicted. After a preliminary examination of Bonapartism and the Napoleonic Idea, the story proper opens with the birth of Louis Napoleon in 1808. The news of the event reached Napoleon I dramatically on the very day on which he announced to Ferdinand VII of Spain, his guest at Bayonne, his decision that he should cease to reign. The tale of Louis Napoleon's countless adventures and escapades is then told. An epilogue culminates in the death of the Prince Imperial, and the extinction of the hope of the Second Empire, in 1879. The book adds nothing to historical knowledge. It is cynical in its lack of moral judgment. But as a piece of brilliant and effective writing it is an undoubted triumph.

MATHEMATICS.

Principles of Geometry. By Prof. H. F. BAKER. Vol. I, Foundations. (12s. net. Cambridge University Press.)

It is now well understood that the foundations of geometry can be laid in an infinite variety of ways. Point, line, plane, are symbols of empty content until defined by the relations postulated to exist between them. Whether the structure built on a particular set of assumptions serves in any way as a means of picturing the relations of the material universe is irrelevant to the development of the science, but even if we do pay regard to this aspect of the matter, Relativity has taught us to look beyond the Euclidian system.

In this treatise on the Principles of Geometry, the first volume deals with Foundations, and Prof. Baker selects as his foundations certain propositions of incidence of point, line, plane, in three dimensions leading immediately to Desargues' Theorem. Later the propositions are extended to space of n dimensions. Propositions of incidence alone are insufficient to account for all the facts suggested by actual experience. The question of correspondence of points in different ranges demands the adoption of some further postulate, and the one selected is the theorem of Pappus. The geometry thus constructed is of great generality. A somewhat different point of view is adopted in the second chapter entitled Real Geometry, where the ideas relating to accessibility and order are taken into consideration. The latter part of the first chapter is devoted to the development of an algebraic symbolism, and this is resumed in the third chapter in connexion with imaginary elements.

As a systematic and authoritative exposition of fundamental ideas the book is unrivalled, and we eagerly look forward to the appearance of the remaining volumes which are stated to be ready for press.

MISCELLANEOUS.

Accounting Principles: Their Use in Business Management. By Prof. S. BELL. (15s. net. Macmillan.)

The author's aim has been to present the principles of accounting in their relation to business management. The book is full of information and useful hints which cannot fail to be appreciated by accountants and business men. As a complete and very clear treatise it should be useful to students, for whose benefit the text is supplied both with special problems and exercises illustrating the principles of the separate chapters.

Company work, costing, and trading transactions are made very clear, from the definite viewpoint of the accountant, and such matters as revenue statements, apportionment of expenses, analysis and controlling accounts are dealt with in a particularly thorough and practical manner.

What Every Girl Should Know. By MARGARET SANGER. (3s. 6d. net. CAPE.)

This might well extend its title to "What every girl, and boy, parent and teacher, should know" on the subject of sex and its manifestations. Told in simple language, avoiding equally the namby-pamby and the unduly technical, this book may be placed in the hands of any adolescent whose parents have evaded their duty during the years of childhood, when most of the instruction is best given, and from it he could learn what he has a right to know, and *should* know. The work of a practical nurse who has met with the deplorable results of ignorance, the book cannot be too strongly recommended. The tone of it is fine throughout, and while fearlessly outspoken, it could not offend the susceptibility or awaken the repugnance of the most delicately-minded or morbid girl.

MODERN LANGUAGES.

Esame di Coscienza di un Letterato. By RENATO SERRA. Edited with Introduction and Notes by PIERO REBORA. (2s. 6d. net. Without Introduction and Notes, 1s. 6d. net. Clarendon Press.)

Among the thinkers and men of letters who fell in the Great War whom the Italians have cause to mourn is Renato Serra. Cut off in the prime of life, he has yet left enough to show that he was a keen critic and a writer of virile prose. When war broke out he wrestled in spirit with the situation that confronted him, and at last he was persuaded to publish his views, in April, 1915, in the weekly paper, *La Voce*. He is struck by the futility of war and convinced that it exerts no appreciable effect, above all, no salutary effect, on human nature; at the same time he is quite clear that it is his duty to take his part in the great conflict. In July of the same year he met his death. Signor Rebora, the lecturer in Italian at Liverpool University, has supplied the "Esame di Coscienza" with an admirable introduction on Serra's life and personality, and with helpful notes.

Verse Translations from the French. By M. H. D. NUTT. (2s. 6d. Methuen.)

The translation of French lyric poetry into English verse is so difficult as to be rarely successful, and a perusal of the present volume tends to confirm this opinion, especially as Mrs. Nutt evidently possesses excellent qualifications. She appreciates the more delicate shades of meaning in the foreign language and she has more than the average command of her own. Occasionally she appears entirely successful, but often the exigencies of rhyme and metre present insuperable difficulties; and not infrequently an unhappy word or phrase jars upon the reader. As an example of her success we would choose her rendering of Rousard's "Aux mouches à miel"; the very next poem, the famous "Sonnet pour Hélène" contains several infelicities, such as the line, "Live, if you me believe, nor wait the morn," which is typical of many distressing inversions. The French text faces the renderings, and contains some charming poems not generally known, for which many will be grateful. Whether, as Mrs. Nutt hopes, the book will find its way into schools and lead others to essay similar translations is perhaps doubtful.

MUSIC.

In a miscellaneous parcel, the most imposing item is Eleanor Smith's "Song Devices and Jingles" (Harrap, 7s. 6d.). It is a book well adapted to the needs of very young children. The songs and games are short and easily memorized, while the accompaniments are simply and (what is more important) cleanly harmonized. By familiarity with these tiny tunes, the child will gradually acquire the taste for diatonic melody and harmony which is the foundation of sound musical training. The book is divided into four sections—Dialogues, Rhythmic Games, Songs, and Greetings.

From Messrs. Joseph Williams, Ltd., come two well-written and useful "Short Dance Tunes" by Dr. C. W. Pearce. The Allemande is the more pleasing, but the Loure, based on a West Country Folk Song, has some engaging contrapuntal devices. In the same firm's well-known Analytical Edition, Mozart's 2nd Pianoforte Sonata is edited and fingered by George Farlane, with an analysis by Stewart Macpherson. Teachers who are not wont to use much of Mozart should place the *Adagio*, if not the *Presto*, of this work on their lists.

The most interesting part of the parcel is a batch of songs (in unison, and in two and three parts) from Messrs. Curwen. Several of these deserve a wide welcome in girls' and preparatory schools. Martin Shaw's "Butterflies" and Felix White's "Jenny Wren" (both in unison) are delightful and practicable numbers. Of the two-part ones, Martin Shaw's "Croakle and Quackle" and Markham Lee's "The Shepherds' Holiday" are almost as good. Felix White's "Marriage Song" (in three parts) is fascinating, but hardly easy; Eric Fogg's "To Blossoms" (also in three parts), while possessing many points of beauty, is really difficult, and suffers a little from lack of continuity. Will not some one give us a similar series for trebles and baritones, suitable for use in boys' schools?

PHILOSOPHY.

The Misuse of Mind: A Study of Bergson's Attack on Intellectualism. By KARIN STEPHEN. (6s. 6d. net. Kegan Paul.)

This volume has the approval of Bergson himself. In his introductory letter he tells us that it is a personal and original interpretation of his views. He is particularly pleased with the distinction Mrs. Stephen draws between *fact* and *matter*. In short he appears to be highly pleased with the work. For ourselves we prefer our Bergson neat. We agree with M. Bergson that Mrs. Stephen has a rare power of thought, but it has not its best field in expounding a philosopher whose characteristic is clearness. It does not encourage the reader to be told that "Bergson *must* use self-contradictory terms if the explanation of reality which he offers is the true one." The book is continually reiterating the impossibility of expressing in words what Bergson means. Dealing with *duration*, our author says, "when we attempt any positive description language simply breaks down, and we can do nothing but contradict ourselves," which she proceeds to do. She explains in parenthesis that what she is expressing is absurd, but there is no other way in view of the inadequacy of language. Matter and memory are "complementary exaggerations," space merely means logicity, duration cannot be described except as a plurality, which is incorrect because it implies that it is made up of parts. The book is quite intelligible to those who know their Bergson, and we assume that it is not meant for those who do not. The author is not unjustified in her suspicion that the plain man and even the philosopher in moments of discouragement thinks that "the whole thing is trivial, a dispute about words of no real importance or dignity." The antidote is to read Bergson himself.

POETRY.

Poems from "Punch," 1909-1920. With an Introductory Essay by W. B. DRAYTON HENDERSON. (7s. 6d. net. Macmillan.)

This collection of poems, many of which are well known outside the pages of *Punch*, will be welcomed by readers of that famous paper, and by others who did not have the opportunity of reading them when they first appeared. There are themes here of all types, from elegies to nursery rhymes; in tone, grave or gay; in form, that of conventional metre or doggerel. The poems are divided into groups according to their subject-matter, such as: Sport, the War, Metropolis, Nymphidia, and Sea-scape. They are very representative of the peculiarly English type of humour which helped to keep our men in the trenches cheerful, and those at home sane, during the terrible years of the War.

Poems by Edgar Allen Poe. Edited and Annotated by C. W. KENT. (2s. 6d. net. Macmillan.)

It should not be forgotten that Poe, little read by English students, was considered by an authority like W. M. Rossetti "one of the permanent glories of their (the American) race." The present handy little volume, edited and annotated by an American lecturer, is intended primarily for schools and colleges, but should prove serviceable to the general reader who wishes to study this unique writer—in his poetry most closely comparable, perhaps, to J. C. Mangan on this side of the Atlantic—to whom we owe "the glory that was Greece" and other unforgettable lines.

PSYCHOLOGY.

A History of the Association Psychology. By Prof. HOWARD C. WARREN. (12s. 6d. Constable.)

Whoever sets out to write a history of Association Psychology really faces the task of writing most of the history of Psychology. So fundamental is the principle of Association that it finds its way in some form or other into all theories, and writers have to be on their guard against the temptation to interpret almost all phenomena in terms of Association. A preliminary difficulty in consequence faces the historian: on what principle is he to classify his material? The plain chronological method has much in its favour on the purely logical side, but it involves a serious amount of repetition if an adequate treatment is to be given to each aspect. Prof. Warren has been very successful in the compromise he has adopted. He follows the chronological plan in a general way, more closely at the beginning and much more loosely towards the end. But within this general plan there is a sub-classification by groups round distinguished names. The earlier part of the book is sound, solid work, but it is more historical than critical. At the later stages there is much more room for originality, and Prof. Warren takes full advantage of his opportunities. His section on Classification is effective, and in Chapter IX he seizes his chance and gives an excellent account of the nature and laws of association that puts the reader into touch with the modern developments of the old theories. No doubt there is an inevitable element of repetition: but the new point of view is so different that no one can object to this slight reduplication. In the final chapter the author is successful in correlating the associationist theory with modern experimental psychology, with special reference to the sensory elements. At this point he is particularly at home as readers of his "Human Psychology" would naturally expect. There is a good bibliography, a workmanlike index, and an ingenious chronological chart of the Associationists.

RELIGIOUS KNOWLEDGE.

Monastic Life in the Middle Ages. With a Note on Great Britain and The Holy See, 1792-1806. By CARDINAL GASQUET. (8s. 6d. net. Bell.)

A collection of essays by Cardinal Gasquet is sure to be interesting and valuable, however much it may be possible to dissent from some of his judgments and presentations of facts. The present volume has all the qualities we should expect to find—it contains a number of papers, some of considerable importance, and all charmingly written. The opening essay on Abbot Wallingford is certainly a fine piece of work. In the skilful hands of the historian the story lives again, and is told with a wealth of detail born of intimate knowledge of the sources. Dr. Gasquet vigorously defends Wallingford against the infamous charges made against him in the so-called "Register." Other essays dealing with monastic life, which are full of interest, are "The Making of St. Alban's Shrine," "An Abbot's House-

hold Account Book," and "A Day with the Abbot of St. Augustine's, Canterbury, in the sixteenth Century." A valuable essay discusses the methods of popular religious teaching in the Middle Ages—"How our Fathers were taught in Catholic Days;" and another deals with "Books and Book-making in early Chronicles and Accounts." Attention must also be called to an important paper on "Adrian IV and Ireland," in which Dr. Gasquet vigorously disputes the authenticity of the famous "Bull" giving the sovereignty of Ireland to King Henry II. A final paper, which is a valuable addition, deals with the relations between Great Britain and the Holy See during the years 1792-1806. The collection of essays is a very delightful one to read, and will richly repay the student.

SCIENCE.

A Laboratory Manual for Comparative Vertebrate Anatomy. By L. H. HYMAN. (\$2.50. The University of Chicago Press.)

Most of our laboratory courses of comparative anatomy are arranged upon the type plan, in which the structure of a selected animal of one group after another is studied more or less completely. This method has the great advantage of giving the student clear ideas of the essential characters of the various classes. In the University of Chicago, laboratory work in vertebrate zoology is conducted in the "comparative" manner, according to which the skeletal, circulatory, nervous, and other systems in turn are studied and compared throughout a series of animals of the several vertebrate classes. It is claimed that, for a student who is afterwards to take up medicine, the comparative method is the more useful, inasmuch as it gives him an understanding of the "history of the human body" unattainable by any other means. The present manual forms an admirable guide to practical work on these lines. The illustrations—though their number, sixty-nine, is small—are well chosen.

BOOKS OF THE MONTH.

The "PROJECTOSCOPE"

For the Screen Projection of Diagrams, Illustrations, &c.

This instrument is designed for the simple and easy projection of picture post cards, &c., on to a screen, placed at a distance of some 10-12 feet.

For Schools and Colleges it will be found to be of great service, enabling lectures to be readily illustrated by the projection of original diagrams or illustrations.

See editorial notice "The Journal of Education," May, 1922, page 276.

FROM Mr. HERBERT RUSSELL'S LIST OF BOOKS.

NOW READY.

A DIGEST OF BRITISH HISTORY.

By S. H. McGRADY, M.A. (Cantab.), Senior History Master, Bromley County School for Boys. With an Introduction by Oscar Browning. Crown 8vo. Cloth. 376 pages.

The new and enlarged edition of the Complete Volume brings the work up to date (June, 1922). Fully Indexed. Price 4s. 6d.

Also published in three parts, as under: Part I, B.C. to 1485. Part II, 1485 to 1789. Part III, 1789 to 1912. Price 1s. 4d.

This work aims at a scientific treatment of British History. The days when lessons consisted of lists of dates and battles, and the lives of favourites are nearly over. To teach the pupil to dig beneath the facts, to reason out for himself causes and results, to see that there are two sides to every question, to realize the eternal march of progress—this is the spirit of History.

"A Digest of British History" is a Note Book, but **not** a mere cram book. Facts are included, not for the sake of filling page after page, but only where they have a logical connexion with Historical movement and developments. It is so arranged that it can be used equally well either for University Scholarship, and Matriculation purposes, or for the Oxford and Cambridge Locals, Senior or Junior.

PAULATIM: A Translation and Composition Book based on the Syntax of the Latin Complex Sentence.

By PERCY H. REANEY, M.A., Classical Master, Sir George Monoux Grammar School, Walthamstow. Crown 8vo. Cloth. 256 pages. Price 4s.

This book is designed to ease the transition from the primer to the Latin author. It anticipates and embodies in a remarkable way the recommendations and findings of the recently appointed Committee on Classics.

Its chief characteristics are: (1) Translation and composition are treated side by side. (2) Rules are deduced from numerous examples. (3) The Latin passages are carefully selected from Latin authors to illustrate the construction dealt with, and continuous passages, complete in themselves, are chosen whenever possible. (4) Most of the exercises for translation into Latin are continuous passages. (5) More attention than is usual at this stage is devoted to the Latin period and Oratio Obliqua.

"Paulatim" serves the purpose of two books—a Reader and a Prose Composition; it may also be used for Unseens. Its use will be a distinct economy.

Copies on approval, or prospectus post free.

L'ENTENTE CORDIALE DES BÉBÉS.

A selection of English Nursery Rimes done into French for English Schools and French Homes. By MME E. GUTCH, Holgate Lodge, York. Crown 8vo. Price 6d.

Within the limitations imposed by rhyme, metre, and grammar, these translations are as nearly literal as possible, and the slight variations will in themselves be a further invaluable test of the scholars' knowledge of French.

"A better means of imparting the rudiments of French to children could hardly be devised."—*The Morning Post*.

FRENCH COMPOSITION.

By F. GUILLOTET, Agrégé de l'Université de France, Licencié ès Lettres, Professeur au Lycée Charlemagne, Paris, H. PROIX, Professeur à l'Ecole supérieure, J. B. SAY, Paris, Professeur d'Ecole Normale. Crown 8vo. Cloth. 280 pages. Price 3s. 6d.

The book is in two parts, and provides a carefully graduated course commencing with the grammar of French composition and finishing with suitable extracts from English authors. The assistance rendered is exactly that which is required by the student who is desirous of attaining a mastery of French idiom.

THE TRANSLATION OF FRENCH

UNSEENS. By EUGENE PERROT, B.-ès-L., French Master, City of London School. Crown 8vo. 187 pages. 2s. 6d.

Contains a valuable introduction dealing with "Method in French Translation" and "Difficulties in French Syntax," followed by a carefully graduated collection of 147 extracts for translation collated from French classical authors and examination papers, and a full vocabulary.
